High Temperature Materials Metallurgical Society of AIME. High Temperature Alloys Committee, 1959 **High Temperature Materials Program**, 1964-01-24 **Materials for High Temperature Engineering Applications** G.W. Meetham, M.H. Van de Voorde, 2000-04-14 This concise survey describes the requirements on materials operating in high temperature environments and the processes increasing temperature capability of metals ceramics and composites The major part deals with the applicable materials and their specific properties One chapter is devoted to coatings The book is written for engineering and science students researchers and managers in industries **Bachelet: high temperature materials** E. Bachelet, 1990-10-15 Themes reflect the work carried out within the framework of COST 501 and of COST 505 the latter being concerned with materials for steam turbines and the first results of the concerted action COST 501 II High temperature materials for power engineering initiated in 1988 **High-Temperature Corrosion and Materials Applications** George Y. Lai, 2007-01-01 George Lai's 1990 book *High Temperature Corrosion of Engineering Alloys* is recognized as authoritative and is frequently consulted and often cited by those in the industry His new book almost double in size with seven more chapters addresses the new concerns new technologies and new materials available for those engaged in high temperature applications As we strive for energy efficiency the realm of high temperature environments is expanding and the need for information on high temperature materials applications was never greater In addition to extensive expansion on most of the content of the original book new topics include erosion and erosion corrosion low NO_x combustion in coal fired boilers fluidized bed combustion and the special demands of waste to energy boilers waste incinerators and black liquor recovery boilers in the pulp and paper industry The corrosion induced by liquid metals is discussed and protection options are presented *High Temperature Materials and Mechanisms* Yoseph Bar-Cohen, 2014-03-03 The use of high temperature materials in current and future applications including silicone materials for handling hot foods and metal alloys for developing high speed aircraft and spacecraft systems has generated a growing interest in high temperature technologies *High Temperature Materials and Mechanisms* explores a broad range of issues related to high temperature materials and mechanisms that operate in harsh conditions While some applications involve the use of materials at high temperatures others require materials processed at high temperatures for use at room temperature High temperature materials must also be resistant to related causes of damage such as oxidation and corrosion which are accelerated with increased temperatures This book examines high temperature materials and mechanisms from many angles It covers the topics of processes materials characterization methods and the nondestructive evaluation and health monitoring of high temperature materials and structures It describes the application of high temperature materials to actuators and sensors sensor design challenges as well as various high temperature materials and mechanisms applications and challenges Utilizing the knowledge of experts in the field the book considers the multidisciplinary nature of high temperature materials

and mechanisms and covers technology related to several areas including energy space aerospace electronics and metallurgy Supplies extensive references at the end of each chapter to enhance further study Addresses related science and engineering disciplines Includes information on drills actuators sensors and more A comprehensive resource of information consolidated in one book this text greatly benefits students in materials science aerospace and mechanical engineering and physics It is also an ideal resource for professionals in the industry

Engineering Physics of High-Temperature Materials Nirmal K. Sinha, Shoma Sinha, 2022-03-29 ENGINEERING PHYSICS OF HIGH TEMPERATURE MATERIALS Discover a comprehensive exploration of high temperature materials written by leading materials scientists In Engineering Physics of High Temperature Materials Metals Ice Rocks and Ceramics distinguished researchers and authors Nirmal K Sinha and Shoma Sinha deliver a rigorous and wide ranging discussion of the behavior of different materials at high temperatures The book discusses a variety of physical phenomena from plate tectonics and polar sea ice to ice age and intraglacial depression and the postglacial rebound of Earth s crust stress relaxation at high temperatures and microstructure and crack enhanced Elasto Delayed Elastic Viscous EDEV models At a very high level Engineering Physics of High Temperature Materials EPHTM takes a multidisciplinary view of the behavior of materials at temperatures close to their melting point The volume particularly focuses on a powerful model called the Elasto Delayed Elastic Viscous EDEV model that can be used to study a variety of inorganic materials ranging from snow and ice metals including complex gas turbine engine materials as well as natural rocks and earth formations tectonic processes It demonstrates how knowledge gained in one field of study can have a strong impact on other fields Engineering Physics of High Temperature Materials will be of interest to a broad range of specialists including earth scientists volcanologists cryospheric and interdisciplinary climate scientists and solid earth geophysicists The book demonstrates that apparently dissimilar polycrystalline materials including metals alloys ice rocks ceramics and glassy materials all behave in a surprisingly similar way at high temperatures This similarity makes the information contained in the book valuable to all manner of physical scientists Readers will also benefit from the inclusion of A thorough introduction to the importance of a unified model of high temperature material behavior including high temperature deformation and the strength of materials An exploration of the nature of crystalline substances for engineering applications including basic materials classification solid state materials and general physical principles Discussions of forensic physical materialogy and test techniques and test systems Examinations of creep fundamentals including rheology and rheological terminology and phenomenological creep failure models Perfect for materials scientists metallurgists and glaciologists Engineering Physics of High Temperature Materials Metals Ice Rocks and Ceramics will also earn a place in the libraries of specialists in the nuclear chemical and aerospace industries with an interest in the physics and engineering of high temperature materials

Coatings of High - Temperature Materials H. H. Hausner, 2013-11-11 The properties of materials depend on the characteristics of the bulk and on those of the surface Any change in surface characteristics affects a wide variety of material properties During the last few years the role of surface phenomena in metallurgy has been the subject of many studies Surface energy surface tension the activity of surfaces and related problems are under discussion in the western world as well as in the eastern world The relation between volume and surface properties in metals and alloys has been investigated and is still under investigation Materials are frequently exposed to environments which change their physical and chemical characteristics on account of a reaction going on between the material surface and the environment The science and technology of surface preparation to improve material properties have gained importance during the last decade in many parts of the world Main efforts have been concentrated especially on the coating of material surfaces in connection with the exposure of these materials to space environment

The Evaluation of High Temperature Materials John C. Wurst, 1964 This report describes the evaluation of candidate materials systems for high temperature service and is presented in two separate parts the first pertains to the development of laboratory tests for the evaluation of refractory alloy coatings the second to the arc plasma jet evaluation of ablative materials impregnated porous ceramics refractory composites and sprayed ceramic coatings Part I describes analytical and experimental approaches leading to the development of an orderly series of tests designed to characterize the oxidation behavior of refractory alloy coatings and to determine their influence upon the physical and mechanical properties of the base metal Part II describes the screening of 78 different high temperature materials with an arc plasma jet testing facility The systems evaluated fell into four general categories ablative materials impregnated porous ceramics refractory composites or sprayed ceramic coatings Testing procedures were adjusted for each class of materials to emphasize particular performance characteristics Author

Advances in Mechanics of High-Temperature Materials Konstantin Naumenko, Manja Krüger, 2019-07-09 This book presents a collection of contributions on advanced approaches to the mechanics of materials and mechanics of structures for high temperature applications such as power plant components engines and turbochargers The contributions highlight advanced constitutive models for high temperature materials as well

as new approaches to the efficient modeling and analysis of engineering structures operating in high temperature environments *Harmonization of Testing Practice for High Temperature Materials* M.S. Loveday, Judith L. Gibbons, 2013-12-20 The present decade is opening new frontiers in high energy astrophysics After the X ray satellites in the 1980 s including Einstein Tenma EXOSAT and Ginga several satellites are or will soon be simultaneously in orbit offering spectacular advances in X ray imaging at low energies ROSAT J Yohkoh as well as at high energies GRANAT in spectroscopy with increased bandwidth ASCA J SAX and in timing XTE While these satellites allow us to study atomic radiation from hot plasmas or energetic electrons other satellites study nuclear radiation at gamma ray energies CGRO associated with radioactivity or spallation reactions These experiments show that the whole universe is emitting radiation at high energies hence we call it the hot universe The hot universe preferentially emitting X and gamma rays provides us with many surprises and much information A symposium The Hot Universe was held in conjunction with the XXIIIrd General Assembly of the International Astronomical Union at Kyoto on August 26 30 in 1997 The proceedings are organized as follows Synthetic view of the hot universe is discussed in Section 1 Plasma and Fresh Nucleosynthesis Phenomena Timely discussions on the strategy for future missions Future Space Program are found in Section 2 Then the contents are divided into two major subjects the compact objects and thin hot diffuse plasmas Section 3 is devoted to the category of compact objects which includes white dwarfs neutron stars and gravitationally collapsed objects stellar mass black holes or active galactic nuclei
