Higher Than Everest An Adventurers Guide To The Solar System:

Higher Than Everest Paul Hodge, 2001-08-02 Few challenges remain for Earth bound adventurers but do not fear the Solar System abounds with weird and wonderful places to explore In this unique guidebook Paul Hodge takes us on a tour of the most spectacular sites in the Solar System His vivid descriptions of the challenges provide a compelling introduction to extra terrestrial environments Starting with a climb of Mars Mt Olympus much higher than Everest you will be taken on imaginary expeditions to such exotic places as the Moon s Alpine Valley Venus precipitous and scorching Mt Maxwell a table mountain on Io the snows of Saturn s rings and Miranda s incredibly high icy cliff You will be treated to a descent into a fabulous canyon on Mars one that dwarfs the Earth s Grand Canyon and will explore the rock lakes and terraces of Copernicus a giant crater on the Moon Who knows one day these adventures may really be done

A Concise History of Solar and Stellar Physics Jean Louis Tassoul, Monique Tassoul, 2004 This book provides a comprehensive overview of the history of ideas about the sun and the stars from antiquity to modern times Two theoretical astrophysicists who have been active in the field since the early 1960s tell the story in fluent prose About half of the book covers most of the theoretical research done from 1940 to the close of the twentieth century a large body of work that has to date been little explored by historians The first chapter which outlines the period from about 3000 B C to 1700 A D shows that at every stage in history human beings have had a particular understanding of the sun and stars and that this has continually evolved over the centuries Next the authors systematically address the immense mass of observations astronomy accumulated from the early seventeenth century to the early twentieth The remaining four chapters examine the history of the field from the physicists perspective the emphasis being on theoretical work from the mid 1840s to the late 1990s from thermodynamics to quantum mechanics from nuclear physics and magnetohydrodynamics to the remarkable advances through to the late 1960s and finally to more recent theoretical work Intended mainly for students and teachers of astronomy this book will also be a useful reference for practicing astronomers and scientifically curious general readers
