## **Higher Creativity:**

*Higher Creativity* Willis Harman, 1984-12-01 Insight is the mind's magic in action solving problems understanding relationships creating new images with a speed and certainty unavailable to ordinary consciousness Breakthrough insights go even further They take a quantum leap beyond ordinary creativity and our previous ways of looking at things to a whole new method of resolving our difficulties Almost all of us have experienced such moments in relation to work oriented or personal problems and wish we could have them more often in fact we can According to Willis Harman Ph D president of the Institute of Noetic Sciences and Howard Rheingold human behavior columnist for Esquire the main reasons we fail to have this kind of breakthrough experience more frequently are that we don't believe we can and we don't apply the known techniques which can generate these insights In *Higher Creativity* the authors discuss this self imposed limitation and argue persuasively for an enlarged image of everyone's creative potential They examine the secret history of inspiration through contemporary and historical accounts of profound creative breakthroughs and finally they describe a surprisingly simple and reproducible sequence that has often triggered these insights for outstanding innovators in business science and the arts These apparently special people became special by harnessing sometimes quite accidentally the awesome power of the unconscious in the service of higher creativity Following their example and using historically validated procedures for reprogramming the unconscious you can learn to capture the lightning for personal breakthrough in your own life

M. van Lange, 2016-06-30 Dishonesty is ubiquitous in our world The news is frequently filled with high profile cases of corporate fraud large scale corruption lying politicians and the hypocrisy of public figures On a smaller scale ordinary people often cheat lie misreport their taxes and mislead others in their daily life Despite such prevalence of cheating corruption and concealment people typically consider themselves to be honest and often believe themselves to be more moral than most others This book aims to resolve this paradox by addressing the question of why people are dishonest all too often What motivates dishonesty and how are people able to perceive themselves as moral despite their dishonest behaviour What personality and interpersonal factors make dishonesty more likely And what can be done to recognise and reduce dishonesty This is a fascinating overview of state of the art research on dishonesty with prominent scholars offering their views to clarify the roots of dishonesty     *Value-Oriented Media Management* Klaus-Dieter Altmeyden, C. Ann Hollifield, Joost van Loon, 2017-04-27 In the light of a rapidly changing media industry with new technologies actors and advertising models and the critical role of media in society this volume highlights the meaning of different values in media companies and media managers decisions It discusses how economic as well as societal values can be equally integrated in media management processes and how such values affect the internal as well as external environment of media companies The contributions analyze various issues in media management such as the relationship between quality and audience demand the role of branding in building values changes in the value chain and the impact of deregulation Further important topics include hypercompetition mediatization challenges for media managers and the meaning of corporate social responsibility     *Understanding Startups From Idea to Market* Yenchun Jim Wu, Chih-Hung Yuan, Mu-Yen Chen, 2022-04-08     **Cognitive Processes in Individual and Collective Creativity: A Cross-Cultural Perspective** Chang Liu, Linden John Ball, Haiying Long, Wangbing Shen, 2019-12-30 Creativity the highest level of human wisdom has become an increasingly important concept in different fields of psychological enquiry particularly because it is portrayed as contributing to many aspects of society including personal development economic prosperity and technological advancement However although considerable research attention from a wide range of disciplinary backgrounds has focused on trying to understand creativity the specific nature of creativity its theoretical underpinnings and cognitive mechanisms

remain unclear not least when it comes to the understanding of creativity at the individual level and creativity at the collective level On the one hand there are crucial distinctions between individual and collective creativity On the other hand the process of being creative involves not only independent or individual efforts but also interdependent or collective efforts Understanding these differences and interrelationships is crucially important in studies of creativity In this Research Topic we bring together research from a wide variety of cognitive and psychological approaches and perspectives in order to provide a comprehensive and in depth understanding of creativity at both the individual and collective levels Furthermore cognitive mechanisms in the creativity process are unavoidably affected by sociocultural factors and these mechanisms look different across cultures particularly between Eastern cultures and Western cultures two worlds that often imply dramatically dissimilar values and perspectives Despite the fact that many studies have compared and contrasted these two cultures in various respects little research has focused on the specific topic of cultural variation in creative cognition In addition very few studies have examined the differences in the cognitive mechanisms underpinning the cultural variations that can be observed at a surface level This Research Topic aims to fill this gap in the literature and examine the cognitive processes and mechanisms in the creativity process at both individual and collective levels across different cultures by using theoretical and empirical evidence
