Mohammad Anis, Naseem Ahmad, 2016-10-08 This book presents basic concepts, methodologies and applications of biotechnology for the conservation and propagation of aromatic medicinal and other economic plants. It caters to the needs and challenges of researchers in plant biology, biotechnology, the medical sciences, pharmaceutical biotechnology and pharmacology areas by providing an accessible and cost-effective practical approach to micro propagation and conservation strategies for plant species. It also includes illustrations describing a complete documentation of the results and research into particular plant species conducted by the authors over the past 5 years. Plant Biotechnology has been a subject of academic interest for a considerable time. In recent years it has also become a useful tool in agriculture and medicine as well as a popular area of biological research. Current economic growth is globally projected in a highly positive manner but the challenges many countries face with regard to food, feed, malnutrition, infectious diseases, the newly identified life style diseases and energy shortages, all of which are worsened by an ever deteriorating environment, continue to pull the growth digits back. The common thread that connects all of the above challenges is biotechnology, which could provide many answers. Molecular biology and biotechnology have now become an integral part of tissue culture research. The tremendous impact generated by genetic engineering and consequently of transgenics now allows us to manipulate plant genomes at will. There has indeed been a rapid development in this area with major successes in both developed and developing countries. The book introduces several new and exciting areas to researchers who are unfamiliar with plant biotechnology and also serves as a review of ongoing research and future directions for scholars. The book highlights numerous methods for in vitro propagation and utilization of techniques in raising transgenics to help readers reproduce the experiments discussed.

Cryopreservation of Plant Germplasm II L.E. Towill, Y.P.S. Bajaj, 2013-03-14 Ex situ preservation of germplasm for higher plant species has been accomplished using either seeds or clones but storage of these under typical conditions does not provide the extreme longevities that are needed to minimize risk of loss. Costs of maintenance and regeneration of stocks are also high. Systems that provide virtually indefinite storage should supplement existing methods and it is within this context that cryopreservation is presented. The use of low temperature preservation was initially more a concern of medicine and animal breeding and was expanded to plants in the 1970s. Survival after cryogenic exposure has now been demonstrated for diverse plant groups including algae, bryophytes, fungi and higher plants. If survival is commonplace then the eventual application is a cryopreservation system whereby cells, tissues and organs are held indefinitely for use often in the unforeseen future. The increasing interest and capabilities for application could not have occurred at a more opportune time since expanding human populations have placed unprecedented pressures on plant diversity. This book emphasizes cryopreservation of higher plants and was initially driven by the concern for loss of diversity in crops and the recognized need that this diversity would be essential for continued improvement of the many plants used by society for food, health and shelter. The interest in cryopreservation has been expanded by conservationists and their concerns for retaining as much as

possible the diversity of natural populations The need for cryopreservation thus is well established Breeding of Neglected and Under-Utilized Crops, Spices, and Herbs Sergio Ochatt,2007-01-06 This book includes 20 different chapters where the authors have addressed various aspects of the cultivation taxonomy socio economic importance and breeding and development as applied to neglected and underutilized crops The first chapter deals with the more general aspects of the cultivation and propagation of these crops thirteen chapters co **Sugarcane** Paul H. Somatic Embryogenesis in Woody Plants S.M. Jain, Pramod P.K. Gupta, R.J. Newton, 2013-04-17 The rapid progress made on somatic embryogenesis and its prospects for potential applications in improving woody plants prompted us to edit this book initially in three volumes and now to add two more volumes The editors were all convinced that such a treatise was needed and would be extremely useful to researchers and students This Volume 4 has been divided into three sections and contains 23 chapters Section A contains eleven chapters covering studies of embryo development and cell biology of white spruce proliferative somatic embryogenesis in woody species somatic embryo germination and desiccation tolerance in conifers performance of conifer somatic seedlings apoptosis during early somatic embryogenesis water relation parameters in conifer embryos image analysis of somatic embryos somatic embryogenesis in woody legumes cold storage and cryopreservation and commercialization of plant somatic embryogenesis Section B contains six chapters dealing with angiosperm woody plants such as somatic embryogenesis in myrtaceous plants Laurus nobilis Simarouba glauca Magnolia spp Juglans cinera and somatic embryogenesis and evaluation of variability in somatic seedlings of Quercus serrata by RAPD markers The chapters contained in Section C are focused on somatic embryogenesis in gymnosperms including Pinus patula Encephalartos Picea wilsonii Pinus banksiana hybrid firs and Taxus All the chapters have been peer reviewed and revised accordingly to improve their quality
