## **Foundations Of Social Evolution:**

**Foundations of Social Evolution** Steven A. Frank, 1998-07-21 He unites these with the best of economic thought a clear theory of model formation and comparative statics the development of simple methods for analyzing complex problems and notions of information and rationality Using this unique multidisciplinary approach Frank makes major advances in understanding the foundations of social evolution

**Social evolution and the what, when, why and how of the major evolutionary transitions in the history of life** Peter Nonacs, Heikki Helanterä, Karen Marie Kapheim, 2023-01-27 [The Philosophy of Social Evolution](#) Jonathan Birch, 2017 From mitochondria to meerkats the natural world is full of spectacular examples of social behaviour Jonathan Birch explores how the three key explanatory ideas of social evolution theory Hamilton's rule kin selection and inclusive fitness can illuminate our understanding of the social world

**Ecology of Social Evolution** Judith Korb, Juergen Heinze, 2008-02-23 Research on the evolution of social behaviour has been dominated by genetic relatedness for a long time however both recent empirical studies and theoretical concepts give growing evidence for ecological factors acting as very prominent additional or alternative driving forces in social evolution Now the time is ripe to investigate similarities and differences in the course of social evolution in different animals This book brings together renowned researchers working on sociality in different animals For the first time they compile the evidence for the importance of ecological factors in the evolution of social life ranging from invertebrate to vertebrate social systems and evaluate its importance versus that of relatedness

**Mathematical Models of Social Evolution** Richard McElreath, Robert Boyd, 2008-09-15 Over the last several decades mathematical models have become central to the study of social evolution both in biology and the social sciences But students in these disciplines often seriously lack the tools to understand them A primer on behavioral modeling that includes both mathematics and evolutionary theory Mathematical Models of Social Evolution aims to make the student and professional researcher in biology and the social sciences fully conversant in the language of the field Teaching biological concepts from which models can be developed Richard McElreath and Robert Boyd introduce readers to many of the typical mathematical tools that are used to analyze evolutionary models and end each chapter with a set of problems that draw upon these techniques Mathematical Models of Social Evolution equips behaviorists and evolutionary biologists with the mathematical knowledge to truly understand the models on which their research depends Ultimately McElreath and Boyd's goal is to impart the fundamental concepts that underlie modern biological understandings of the evolution of behavior so that readers will be able to more fully appreciate journal articles and scientific literature and start building models of their own

**The Social Evolution of Human Nature** Harry Smit, 2014-04-03 This book sheds new light on the problem of how the human mind evolved Harry Smit argues that current studies of this problem misguidedly try to solve it by using variants of the Cartesian conception of the mind and shows that combining the Aristotelian conception with Darwin's theory provides us with far more interesting answers He discusses the

core problem of how we can understand language evolution in terms of inclusive fitness theory and investigates how scientific and conceptual insights can be integrated into one explanatory framework which he contrasts with the alternative Cartesian derived framework He then explores the differences between these explanatory frameworks with reference to cooperation and conflict at different levels of biological organization the evolution of communicative behaviour the human mind language and moral behaviour His book will interest advanced students and scholars in a range of subjects including philosophy biology and psychology

*Domains and Major Transitions of Social Evolution* Jacobus J. Boomsma, 2023-05-24

Evolutionary change is usually incremental and continuous but some increases in organizational complexity have been radical and divisive Evolutionary biologists who refer to such events as major transitions have not always appreciated that these advances were novel forms of pairwise commitment that subjugated previously independent agents Inclusive fitness theory convincingly explains cooperation and conflict in societies of animals and free living cells but to deserve its eminent status it should also capture how major transitions originated from prokaryote cells to eukaryote cells via differentiated multicellularity to colonies with specialized queen and worker castes As yet no attempt has been made to apply inclusive fitness principles to the origins of these events *Domains and Major Transitions of Social Evolution* develops the idea that major evolutionary transitions involved new levels of informational closure that moved beyond looser partnerships Early neo Darwinians understood this principle but later social gradient thinking obscured the discontinuity of life's fundamental organizational transitions The author argues that the major transitions required maximal kinship in simple ancestors not conflict reduction in already elaborate societies Reviewing more than a century of literature he makes testable predictions proposing that open societies and closed organisms require very different inclusive fitness explanations It appears that only human ancestors lived in societies that were already complex before our major cultural transition occurred We should therefore not impose the trajectory of our own social history on the rest of nature This thought provoking text is suitable for graduate level students taking courses in evolutionary biology behavioural ecology organismal developmental biology and evolutionary genetics as well as professional researchers in these fields It will also appeal to a broader interdisciplinary audience including the social sciences and humanities

*Social Evolution and Inclusive Fitness Theory* James A.R.

Marshall, 2019-01-08 Social behavior has long puzzled evolutionary biologists since the classical theory of natural selection maintains that individuals should not sacrifice their own fitness to affect that of others *Social Evolution and Inclusive Fitness Theory* argues that a theory first presented in 1963 by William D Hamilton inclusive fitness theory provides the most fundamental and general explanation for the evolution and maintenance of social behavior in the natural world James Marshall guides readers through the vast and confusing literature on the evolution of social behavior introducing and explaining the competing theories that claim to provide answers to questions such as why animals evolve to behave altruistically Using simple statistical language and techniques that practicing biologists will be familiar with he provides a

comprehensive yet easily understandable treatment of key concepts and their repeated misinterpretations Particular attention is paid to how more realistic features of behavior such as nonadditivity and conditionality can complicate analysis Marshall highlights the general problem of identifying the underlying causes of evolutionary change and proposes fruitful approaches to doing so in the study of social evolution Social Evolution and Inclusive Fitness Theory describes how inclusive fitness theory addresses both simple and complex social scenarios the controversies surrounding the theory and how experimental work supports the theory as the most powerful explanation for social behavior and its evolution

**On Social Evolution** Shiping Tang, 2020-02-26 Tang provides a coherent and systematic exploration of social evolution as a phenomenon and as a paradigm He critically builds on existing discussions on social evolution while drawing from a wide range of disciplines including archaeology evolutionary anthropology sociology economics political science the philosophy of social sciences and evolutionary biology Clarifying the relationship between biological evolution and social evolution Tang lays bare the ontological and epistemological principles of the social evolutionary paradigm He also presents operational principles and tools for deploying this paradigm to understand empirical puzzles about human society This is a vital resource for students practitioners and philosophers of all social sciences

**Handbook on Evolution and Society** Alexandra Maryanski, Richard Machalek, Jonathan H. Turner, 2015-11-17 Handbook on Evolution and Society brings together original chapters by prominent scholars who have been instrumental in the revival of evolutionary theorizing and research in the social sciences over the last twenty five years Previously unpublished essays provide up to date critical surveys of recent research and key debates The contributors discuss early challenges posed by sociobiology the rise of evolutionary psychology the more conflicted response of evolutionary sociology to sociobiology and evolutionary psychology Chapters address the application and limitations of Darwinian ideas in the social sciences Prominent authors come from a variety of disciplines in ecology biology primatology psychology sociology and the humanities The most comprehensive resource available this vital collection demonstrates to scholars and students the new ways in which evolutionary approaches ultimately derived from biology are influencing the diverse social sciences and humanities

**Rethinking Social Evolution** Jérôme Rousseau, 2006-10-26 A wide ranging exploration of how language and increased cognitive abilities constitute the motor of social evolution

**Social Evolution and Sociological Categories (Routledge Revivals)** Paul Q. Hirst, 2010-01-21 First published in 1976 this book is concerned with the nature of classification in the social sciences Its thesis is that classifications are dependent upon and are derived from theoretical explanations Classification is not a theoretically neutral typification or ordering of social forms This is because objects classified societies social institutions are not given to knowledge independently of the categories which construct them and because the categories of classification are themselves the products of theories

*Introduction to Urban Science* Luis M. A. Bettencourt, 2021-08-17 A novel integrative approach to cities as complex adaptive systems applicable to issues ranging from innovation to economic prosperity to settlement

patterns Human beings around the world increasingly live in urban environments In Introduction to Urban Science Luis Bettencourt takes a novel integrative approach to understanding cities as complex adaptive systems claiming that they require us to frame the field of urban science in a way that goes beyond existing theory in such traditional disciplines as sociology geography and economics He explores the processes facilitated by and in many cases unleashed for the first time by urban life through the lenses of social heterogeneity complex networks scaling circular causality and information Though the idea that cities are complex adaptive systems has become mainstream until now those who study cities have lacked a comprehensive theoretical framework for understanding cities and urbanization for generating useful and falsifiable predictions and for constructing a solid body of empirical evidence so that the discipline of urban science can continue to develop Bettencourt applies his framework to such issues as innovation and development across scales human reasoning and strategic decision making patterns of settlement and mobility and their influence on socioeconomic life and resource use inequality and inequity biodiversity and the challenges of sustainable development in both high and low income nations It is crucial says Bettencourt to realize that cities are not zero sum games and that knowledge human cooperation and collective action can build a better future

**Human Social Evolution** Kyle Summers, Bernard Crespi, 2013-06-24 Richard D Alexander is an accomplished entomologist who turned his attention to solving some of the most perplexing problems associated with the evolution of human social systems Using impeccable Darwinian logic and elaborating extending and adding to the classic theoretical contributions of pioneers of behavioral and evolutionary ecology like George Williams William Hamilton and Robert Trivers Alexander developed the most detailed and comprehensive vision of human social evolution of his era His ideas and hypotheses have inspired countless biologists anthropologists psychologists and other social scientists to explore the evolution of human social behavior in ever greater detail and many of his seminal ideas have stood the test of time and come to be pillars of our understanding of human social evolution This volume presents classic papers or chapters by Dr Alexander each focused on an important theme from his work Introductions by Dr Alexander s former students and colleagues highlight the importance of his work to the field describe more recent work on the topic and discuss current issues of contention and interest

**The Handbook of Evolutionary Economic Geography** Ron A. Boschma, Ron L. Martin, 2010 This wide ranging handbook studies and defines the paradigm of evolutionary economic geography The distinguished contributors highlight the key conceptual theoretical and empirical advances and present a clear statement of their aims objectives and methods

**Genetic and Cultural Evolution of Cooperation** Peter Hammerstein, 2003 Table of contents *Nomadic Pathways in Social Evolution* Kradin, Nikolay N., Barfield, Thomas J., 2015-04-26 The book is written by anthropologists historians and archaeologists specializing in nomadic studies All the chapters presented here discuss various aspects of one significant problem how could small nomadic peoples at the outskirts of agricultural civilizations subjugate vast territories between the Mediterranean and the Pacific What was the impetus that

set in motion the overwhelming forces of the nomads which made tremble the royal courts of Europe and Asia Was it an outcome of any predictable historical process or a result of a chain of random events A wide sample of nomadic peoples is discussed mainly on the basis of new data      **Proceedings of the Workshop on Cognitive Social Sciences** Ron Sun,

*Philosophical Foundations of the Social Sciences* Harold Kincaid, 1996 This 1996 book argues that behind the diverse methods of the natural sciences lies a common core of scientific rationality      Evolutionary Social Theory and Political Economy Clifford S. Poirer Jr., 2023-02-27 Evolutionary Social Theory and Political Economy traces the origins extension marginalization and revival of evolutionary approaches to social theory from the Enlightenment through the beginning of the 21st century It demonstrates how changes in understandings of social evolution corresponded to changes in definitions of Political Economy and how both reflected changes in the Philosophy of Science This book is written for students and researchers alike in all the social sciences Economists will benefit from understanding how ideas about evolution in Economics corresponded to ideas about evolution in other social sciences and Social Scientists outside of Economics will benefit from understanding how Economics has related to their discipline
