Ceramic Materials C. Barry Carter, M. Grant Norton, 2007-10-23 Ceramic Materials Science and Engineering is an up to date treatment of ceramic science engineering and applications in a single integrated text Building on a foundation of crystal structures phase equilibria defects and the mechanical properties of ceramic materials students are shown how these materials are processed for a broad diversity of applications in today's society Concepts such as how and why ions move how ceramics interact with light and magnetic fields and how they respond to temperature changes are discussed in the context of their applications References to the art and history of ceramics are included throughout the text The text concludes with discussions of ceramics in biology and medicine ceramics as gemstones and the role of ceramics in the interplay between industry and the environment Extensively illustrated the text also includes questions for the student and recommendations for additional reading **KEY FEATURES** Combines the treatment of bioceramics furnaces glass optics pores gemstones and point defects in a single text Provides abundant examples and illustrations relating theory to practical applications Suitable for advanced undergraduate and graduate teaching and as a reference for researchers in materials science Written by established and successful teachers and authors with experience in both research and industry *Non-equilibrium Phenomena In Supercooled Fluids, Glasses And Amorphous Materials - Proceedings Of The Workshop* Mario P Tosi, Dino Leporini, Marco Giordano, 1996-09-20 This volume contains the Proceedings of the International Workshop on Non Equilibrium Phenomena in Supercooled Fluids Glasses and Amorphous Materials held in Pisa in the early fall of 1995 as a joint initiative of the University of Pisa and of the Scuola Normale Superiore The goal was to bring together liquid state physicists chemists and engineers to review current developments and comparatively discuss experimental facts and theoretical predictions in this vast scientific area The core of the Workshop was a set of general lectures followed by more specific presentations on current issues in the main areas of the field This structure has been maintained in this volume in which a set of five overviews is followed by topically grouped contributions in the five areas of ionic glasses and glassy materials the glass transition viscous flow and microscopic relaxation complex fluids and polymers The volume also preserves a record of the many short contributions given to the Workshop through posters which are grouped in it under the subjects of inorganic glasses organic glasses and complex fluids polymers and theoretical aspects Relaxation and Diffusion in Complex Systems K.L. Ngai, 2011-03-25 The usefulness of the book to the reader is exposure to many different classes of materials and relaxation phenomena They are tied together by the universal relaxation and diffusion properties they share and a consistent explanation of their origin The readers can apply what they learn to solve their own problems and use it as a stepping stone to make further advances in theoretical understanding of the origin of the universality Agricultural Knowledge Networks in Rural Europe, 1700-2000 Yves Segers, Leen Van Molle, 2022 An examination of how farming expertise could be shared and extended over four centuries All kinds of knowledge from traditional know how to modern

science are socially contingent and the product of an age long and permanent social struggle This book unravels the creation and the exchange of agronomic knowledge in rural Europe from the early eighteenth century up until the end of the twentieth It explores the spreading of knowing through the lens of knowledge networks where did agricultural knowledge come from and how did one learn to run a farm Who was involved in this process of knowledge exchange Which strategies and communicative methods were employed and what kind of networks were active The answers to these questions mirror as the book illustrates the inventiveness of the actors on the scene the creativity of a French naturalist in establishing links with local farmers to stop the circulation of a devastating grain moth the power of the agricultural press to instill proper values into Hungarian farming practices or to shape the identity of the Galician agrarian movement and the agency of post war British farmers in selecting their own information from sources such as lectures to the Young Farmers Club visits by public advisors and representatives of commercial firms and radio programs From the start of the agricultural Enlightenment increasingly farmers have been besieged by a growing army of experts telling them what to do when and how In a sense farming has become one of the most patronised professions But farmers can resist and carve their own path The chapters here reveal the continuous tensions between science based agriculture and practice based farming between the expert image of an ideal agriculture and the less known self image of being a good farmer The dominant process as this book shows is that of an instrumental top down transmission of knowledge from the lab to the field But between these two poles complex and flourishing networks developed functioning as trading zones in which knowledge and experience could be circulated put to the test forgotten altered rejected and sometimes imposed
