**Behavioral Adaptation to Intertidal Life** Guido Chelazzi, Marco Vannini, 2013-12-20 The NATO Advanced Research Workshop on Behavioural Adaptation to Intertidal Life held in Castiglione della Pescaia Italy May 1987 was attended by 50 participants most of whom presented requested lectures It was perhaps the first time that specialists of various animal groups from cnidarians to birds were able to meet and discuss the importance of behavioural adaptation to this peculiar sometimes very harsh environment But the taxonomic barrier is not the only one which the meeting attempted to overcome Lately the research on intertidal biology has spread from pure taxonomy and static analysis of community structure to such dynamic aspects as intra and interspecific relationships and physiological mechanisms aimed at avoiding stress and exploitation of limited resources This increasing interest stems not only from an inclination for this particular ecological system and some of its typical inhabitants but also from the realization that rocky and sandy shore communities

are suitable models for testing and improving some global theories of evolutionary biology behavioural ecology and sociobiology The number of eco physiological and eco ethological problems emerging from the study of intertidal animals is fascinatingly large and a complete understanding of this environment cannot be reached using a strictly reductionistic or a pure holistic approach *Biomechanics in Animal Behaviour* R.W.
