Puettmann, K. David Coates, Christian C. heterogeneity of ecosystems The authors suggest that ideas and approaches from these fields could offer a road map to a new philosophical and practical approach that endorses managing forests as complex adaptive systems A Critique of Silviculture bridges a gap between silviculture and ecology that has long hindered the adoption of new ideas It breaks the mold of disciplinary thinking by directly linking new ideas and findings in ecology and complexity science to the field of silviculture This is a critically important book that is essential reading for anyone involved with forest ecology forestry silviculture or the management of forested ecosystems

Leary, 2012-12-06 As I understand it a book Preface is where the author explains to the reader how the book in hand came about something of the personal reasons for having inflicted such extended duress on one s self to complete the manuscript and other items that are fit to say but do not fit in the text This book had its conceptual beginnings in the 1970 s with my studies in scientific synthesis at the North Central Forest Experiment Station St Paul Minnesota Ours is clearly the age of analysis But I felt we must soon begin frameworks for synthesis or a synthesis would never be possible In short I hoped to develop interaction as an integrative principle in forestry As work progressed on the manuscript other subthemes developed First there was the vague feeling on my part that the forestry profession was losing ground in the contest to see who should manage the forests of the world This was happening not because foresters do not know how to manage forests in a reasonable manner but because the public seemed to be losing faith in the judgement of foresters as professional responsible wise land managers Several well known incidents of poor judgement in timber harvesting methods on national forests in the United States did little to help the forester s image      *Environmental Issues in Pacific Northwest Forest Management* National Research Council, Commission on Life Sciences, Board on Biology, Committee on Environmental Issues in Pacific Northwest Forest Management, 2000-08-14 People are demanding more of the goods services and amenities provided by the forests of the Pacific Northwest but the finiteness of the supply has become clear This issue involves complex questions of biology economics social values community life and federal intervention Forests of the Pacific Northwest explains that economic and aesthetic benefits can be sustained through new approaches to management proposes general goals for forest management and discusses strategies for achieving them Recommendations address restoration of damaged areas management for multiple uses dispute resolution and federal authority The volume explores the market role of Pacific Northwest wood products and looks at the implications if other regions should be expected to make up for reduced timber

harvests The book also reviews the health of the forested ecosystems of the region evaluating the effects of past forest use patterns and management practices It discusses the biological importance social significance and management of old growth as well as late succession forests This volume will be of interest to public officials policymakers the forest products industry environmental advocates researchers and concerned residents
