Four Color Problem Rev Lecture:

Lectures On Fuzzy And Fuzzy Susy Physics Aiyalam P Balachandran, Seckin Kurkcuoglu, Sachindeo Vaidya, 2007-02-09
Noncommutative geometry provides a powerful tool for regularizing quantum field theories in the form of fuzzy physics. Fuzzy physics maintains symmetries, has no fermion doubling problem, and represents topological features efficiently. These lecture notes provide a comprehensive introduction to the field. Starting with the construction of fuzzy spaces using the concrete examples of the fuzzy sphere and fuzzy complex projective spaces, the book moves on to discuss the technology of star products on noncommutative R^2 and on the fuzzy sphere. Scalar spinor and gauge field theories, as well as extended objects such as monopoles and nonlinear sigma models, are treated in considerable detail. A detailed treatment of the regularization of supersymmetry is given using the techniques of fuzzy physics.

Four Colors Suffice Robin J. Wilson, 2002
On October 23, 1852, Professor Augustus De Morgan wrote a letter to a colleague unaware that he was launching one of the most famous mathematical conundrums in history, one that would confound thousands of puzzlers for more than a century. This is the amazing story of how the map problem was solved. The problem posed in the letter came from a former student: What is the least possible number of colors needed to fill in any map, real or invented, so that neighboring counties are always colored differently? This deceptively simple question was of minimal interest to cartographers who saw little need to limit how many colors they used. But the problem set off a frenzy among professional mathematicians and amateur problem solvers: among them, Lewis Carroll, an astronomer, a botanist, an obsessive golfer, the Bishop of London, a man who set his watch only once a year, a California traffic cop, and a bridegroom who spent his honeymoon coloring maps. In their pursuit of the solution, mathematicians painted maps on doughnuts and horseshoes and played with patterned soccer balls and the great rhombicuboctahedron. It would be more than one hundred years and countless colored maps later before the result was finally established. Even then, difficult questions remained, and the intricate solution, which involved no fewer than 1,200 hours of computer time, was greeted with as much dismay as enthusiasm. Providing a clear and elegant explanation of the problem and the proof, Robin Wilson tells how a seemingly innocuous question baffled great minds and stimulated exciting mathematics with far-flung applications. This is the entertaining story of those who failed to prove and those who ultimately did prove that four colors do indeed suffice to color any map.

University Record University of Chicago, 1898 Harvard University Gazette, 1911 Structure: From Physics To General Systems - Festschrift Volume In Honor Of E R Caianiello On His Seventieth Birthday (In 2 Volumes) Maria Marinaro, Gaetano Scarpetta, 1993-02-23. This Festschrift volume in honour of Prof E R Caianiello contains invited papers of eminent scientists who have worked in the several areas to which Prof Caianiello has given seminal contributions: quantum field theory, foundations of quantum mechanics, and maximal acceleration. Vol 1: neural nets, general systems theory, and various topics of cybernetics. Vol 2: The wide range of topics covered shows the fruitfulness of a higher unifying perspective on seemingly diverse subjects.
