Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller,Elise Klein,Klaus F Willmes - von Hinckeldey,Karin Kucian,2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals

with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers December Monthly Collection, Grade 4 ,2017-11-20 The December Monthly Collection for fourth grade is aligned to current state standards and saves valuable prep time for centers and independent work The included December calendar is filled with notable events and holidays and the included blank calendar is editable allowing the teacher to customize it for their classroom Student resource pages are available in color and black and white Additional collection resources include Reading comprehension summarizing compare and contrast Punctuation practice Homophones Homographs Fractions improper equivalent addition and subtraction Multiplication and dividing large numbers Computer Science vocabulary Homework BINGO Winter Reading log The December Monthly Collection for fourth grade can be used in or out of the classroom to fit the teachers needs and help students stay engaged Each Monthly Collection is designed to save teachers time with grade appropriate resources and activities that can be used alongside classroom learning as independent practice center activities or homework Each one includes ELA Math and Science resources in a monthly theme engaging students with timely and interesting content All Monthly Collections included color and black and white student pages an answer key and editable calendars for teachers to customize This resource may be printed and photocopied for use in a single classroom only
