Introduction to Enterprise Architecture Scott A. Bernard, 2012-08-13. *Introduction to Enterprise Architecture* is the culmination of several decades of experience that I have gained through work initially as an information technology manager and then as a consultant to executives in the public and private sectors. I wrote this book for three major reasons: 1) to help move business and technology planning from a systems and process level view to a more strategy-driven enterprise level view; 2) to promote and explain the emerging profession of EA; and 3) to provide the first textbook on the subject of EA, which is suitable for graduate and undergraduate levels of study. To date, other books on EA have been practitioner books, not specifically oriented toward a student who may be learning the subject with little to no previous exposure. Therefore, this book contains references to related academic research and industry best practices, as well as my own observations about potential future practices and the direction of this emerging profession.

Coding for Channels with Feedback James M. Ooi, 2012-12-06

Coding for Channels with Feedback presents both algorithms for feedback coding and performance analyses of these algorithms including analyses of perhaps the most important performance criterion computational complexity The algorithms are developed within a single framework termed the compressed error cancellation framework where data are sent via a sequence of messages the first message contains the original data each subsequent message contains a source coded description of the channel distortions introduced on the message preceding it Coding for Channels with Feedback provides an easily understood and flexible framework for deriving low complexity practical solutions to a wide variety of feedback communication problems It is shown that the compressed error cancellation framework leads to coding schemes with the lowest possible asymptotic order of growth of computations and can be applied to discrete memoryless channels finite state channels channels with memory

unknown channels and multiple access channels all with complete noiseless feedback as well as to channels with partial and noisy feedback This framework leads to coding strategies that have linear complexity and are capacity achieving and illustrates the intimate connection between source coding theory and channel coding theory Coding for Channels with Feedback is an excellent reference for researchers and communication engineers in the field of information theory and can be used for advanced courses on the topic

Mobile Lightweight Wireless Systems Periklis Chatzimisios,Christos Verikoukis,Ignacio Santamaria,Massimiliano Laddomada,Oliver Hoffmann,2010-11-30 Following the success of the First MOBILIGHT 2009 in Athens Greece the Second International Conference on Mobile Lightweight Systems MOBILIGHT was held in Barcelona Spain on May 10 12 2010 It was not an easy decision to carry on organizing a scientific event on wireless communications where competition is really enormous This decision was motivated by discussion with many colleagues about the current unprecedented demand for lightweight wireless communication devices with high usability and performance able to support added value services in a highly mobile environment Such devices follow the users everywhere they go at work at home while travelling in a classroom etc and result in exciting research development and business opportunities Such scenarios clearly demand significant upgrades to the existing communication paradigm in terms of infrastructure devices and services to support the anytime anywhere any device philosophy providing novel and fast evolving requirements and expectations on search and development in the field of information and communication technologies The core issue is to support wireless users desire for 24 7 network availability and transparent access to their own services In this context we continue to envision an international forum where practitioners and researchers coming from the many areas involved in lightweight wireless systems design and deployment would be able to interact and exchange experiences
