Groups with the Haagerup Property Pierre-Alain Cherix, Michael Cowling, Paul Jolissaint, Pierre Julg, Alain Valette, 2012-12-06 A locally compact group has the Haagerup property or is a T menable in the sense of Gromov if it admits a proper isometric action on some affine Hilbert space As Gromov s pun is trying to indicate this definition is designed as a strong negation to Kazhdan s property T characterized by the fact that every isometric action on some affine Hilbert space has a fixed point The aim of this book is to cover for the first time in book form various aspects of the Haagerup property New characterizations are brought in using ergodic theory or operator algebras Several new examples are given and new approaches to previously known examples are proposed Connected Lie groups with the Haagerup property are completely characterized

Theory, Numerics and Applications of Hyperbolic Problems II Christian Klingenberg, Michael Westdickenberg, 2018-06-27 The second of two volumes this edited proceedings book features research presented at the XVI International Conference on Hyperbolic Problems held in Aachen Germany in summer 2016 It focuses on the theoretical applied and computational aspects of hyperbolic partial differential equations systems of hyperbolic conservation laws wave equations etc and of related mathematical models PDEs of mixed type kinetic equations nonlocal or and discrete models found in the field of applied sciences

Maximal Subellipticity Brian Street, 2023-07-04 Maximally subelliptic partial differential equations PDEs are a far reaching generalization of elliptic PDEs Elliptic PDEs hold a special place sharp results are known for general linear and even fully nonlinear elliptic PDEs Over the past half century important results for elliptic PDEs have been generalized to maximally subelliptic PDEs This text presents this theory and generalizes the sharp interior regularity theory for general linear and fully nonlinear elliptic PDEs to the maximally subelliptic setting

Analysis on Non-Riemannian Symmetric Spaces Mogens Flensted-Jensen, 1986-12-31 Harmonic analysis on Riemannian semisimple symmetric spaces and on special types of non Riemannian semisimple symmetric spaces are well established theories This book presents a systematic treatment of the basic problems on semisimple symmetric spaces and a discussion of some of the more important recent

developments in the field The author's primary contribution has been his idea of how to construct the discrete series for such a space In this book a fundamental role is played by the ideas behind that construction namely the duality principle the orbit picture related to it and the definition of representations by means of distributions on the orbits Intended as a text at the upper graduate level the book assumes a basic knowledge of Fourier analysis differential geometry and functional analysis In particular the reader should have a good knowledge of the general theory of real and complex Lie algebras and Lie groups and of the root and weight theories for semisimple Lie algebras and Lie groups

Noncompact Lie Groups and Some of Their Applications Elizabeth A. Tanner, R. Wilson, 2012-12-06

During the past two decades representations of noncompact Lie groups and Lie algebras have been studied extensively and their application to other branches of mathematics and to physical sciences has increased enormously Several theorems which were proved in the abstract now carry definite mathematical and physical significance Several physical observations which were not understood before are now explained in terms of models based on new group theoretical structures such as dynamical groups and Lie supergroups The workshop was designed to bring together those mathematicians and mathematical physicists who are actively working in this broad spectrum of research and to provide them with the opportunity to present their recent results and to discuss the challenges facing them in the many problems that remain The objective of the workshop was indeed well achieved This book contains 31 lectures presented by invited participants attending the NATO Advanced Research Workshop held in San Antonio Texas during the week of January 3-8 1993 The introductory article by the editors provides a brief review of the concepts underlying these lectures cited by author and mentions some of their applications The articles in the book are grouped under the following general headings Lie groups and Lie algebras Lie superalgebras and Lie supergroups and Quantum groups and are arranged in the order in which they are cited in the introductory article We are very thankful to Dr

Unitary Representations and Harmonic Analysis M. Sugiura, 1990-03-01 The principal aim of this book is to give an introduction to harmonic analysis and the theory of unitary representations of Lie groups The second edition has been brought up to date with a number of textual changes in each of the five chapters a new appendix on Fatou's theorem has been added in connection with the limits of discrete series and the bibliography has been tripled in length

Topology and Its Applications Sergei Petrovich Novikov, 1993 Translated from the 1992 Russian edition Proceedings of a conference held in Zagulba near Baku in October 1987 Papers discuss flows on surfaces topological characteristics of infinite dimensional mappings and the solvability of nonlinear boundary value problems combinatorics of a partial fraction decomposition the theory of spaces of continuous functions and spectral asymptotics of the Laplacian on a fundamental domain in three dimensional hyperbolic space No index Annotation copyright by Book News Inc Portland OR

Invariant Theory Sebastian S. Koh, 2006-11-15 This volume of expository papers is the outgrowth of a conference in combinatorics and invariant theory In recent years newly developed techniques from algebraic geometry and combinatorics have been applied with great

success to some of the outstanding problems of invariant theory moving it back to the forefront of mathematical research once again This collection of papers centers on constructive aspects of invariant theory and opens with an introduction to the subject by F Grosshans Its purpose is to make the current research more accessible to mathematicians in related fields

Mathematics Into the Twenty-first Century American Mathematical Society, 1992 In the summer of 1988 in Providence the AMS celebrated its centennial with a wide range of mathematical activities Among those was a symposium Mathematics into the Twenty first Century which brought together a number of the top research mathematicians who will likely have a significant impact on the mathematics of this century This book contains the lectures presented by 16 of the 18 individuals who spoke during the symposium Written by some of the major international figures in mathematical research this group of articles covers a panorama of the vital areas of mathematics at the turn of the 21st century and gives the general mathematical reader a broad perspective on some of the major trends in research *Hypoelliptic Estimates and Spectral Theory for Fokker-Planck Operators and Witten Laplacians* Francis Nier, Bernard Helffer, 2005-01-17 There has recently been a renewal of interest in Fokker Planck operators motivated by problems in statistical physics in kinetic equations and differential geometry Compared to more standard problems in the spectral theory of partial differential operators those operators are not self adjoint and only hypoelliptic The aim of the analysis is to give as generally as possible an accurate qualitative and quantitative description of the exponential return to the thermodynamical equilibrium While exploring and improving recent results in this direction this volume proposes a review of known techniques on the hypoellipticity of polynomial of vector fields and its global counterpart the global Weyl H rmander pseudo differential calculus the spectral theory of non self adjoint operators the semi classical analysis of Schr dinger type operators the Witten complexes and the Morse inequalities *CRM Proceedings & Lecture Notes*, 1998 *Classical And Quantum Systems: Foundations And Symmetries - Proceedings Of The 2nd International Wigner Symposium* Heinz-dietrich Doebner, F Schroeck Jr, W Scherer, 1993-01-19 The Wigner Symposium series is focussed on fundamental problems and new developments in physics and their experimental theoretical and mathematical aspects Particular emphasis is given to those topics which have developed from the work of Eugene P Wigner The 2nd Wigner symposium is centered around notions of symmetry and geometry the foundations of quantum mechanics quantum optics and particle physics Other fields like dynamical systems neural networks and physics of information are also represented This volume brings together 19 plenary lectures which survey latest developments and more than 130 contributed research reports *Extremals for the Sobolev Inequality and the Quaternionic Contact Yamabe Problem* Stefan P. Ivanov, Dimitar N. Vassilev, 2011 The aim of this book is to give an account of some important new developments in the study of the Yamabe problem on quaternionic contact manifolds This book covers the conformally flat case of the quaternionic Heisenberg group or sphere where complete and detailed proofs are given together with a chapter on the conformal curvature tensor introduced very recently by the authors The starting point of the

considered problems is the well known Folland Stein Sobolev type embedding and its sharp form that is determined based on geometric analysis This book also sits at the interface of the generalization of these fundamental questions motivated by the Carnot Caratheodory geometry of quaternionic contact manifolds which have been recently the focus of extensive research motivated by problems in analysis geometry mathematical physics and the applied sciences Through the beautiful resolution of the Yamabe problem on model quaternionic contact spaces the book serves as an introduction to this field for graduate students and novice researchers and as a research monograph suitable for experts as well
