Antonios Garas,2016-02-04 This volume provides an introduction to and overview of the emerging field of interconnected networks which include multilayer or multiplex networks as well as networks of networks Such networks present structural and dynamical features quite different from those observed in isolated networks The presence of links between different networks or layers of a network typically alters the way such interconnected networks behave understanding the role of interconnecting links is therefore a crucial step towards a more accurate description of real world systems While examples of such dissimilar properties are becoming more abundant for example regarding diffusion robustness and competition the root of such differences remains to be elucidated Each chapter in this topical collection is self contained and can be read on its own thus making it also suitable as reference for experienced researchers wishing to focus on a particular topic **A**
