languages and tools and structuring and modularization concepts for specification languages The contributions have been written in a tutorial survey style by the top experts in the corresponding areas This volume is accompanied by a CD Rom containing implementations of specification environments based on graphtransformation systems and tools whose implementation is based on the use of graph transformation systems   Database Machines Haran Boral,Pascal Faudemay,1989 This volume contains 24 papers presented at the Sixth International Workshop on Database Machines The papers cover a wide spectrum of topics including system architectures storage structures associative memory architectures memory resident systems deduction and retrospectives on maturing projects The nature of the papers is highly technical and presumes knowledge of database management systems and familiarity with database machines The book is representative of the dual trend in the field towards 1 search for new functionability and 2 attention to detail completeness and performance of prototype implementations   *Handbook of Automated Reasoning* Alan J.A. Robinson,Andrei Voronkov,2001-06-22 Handbook of Automated Reasoning   *Introduction to Functional Programming Systems Using Haskell* Antony J. T. Davie,1992-06-18 Here is an introduction to functional programming and its associated systems A unique feature is its use of the language Haskell for teaching both the rudiments and the finer points of the functional technique Haskell is a new internationally agreed and accepted functional language that is designed for teaching research and applications that has a complete formal description that is freely available and that is based on ideas that have a wide consensus Thus it encapsulates some of the main thrusts of functional programming itself which is a style of programming designed to confront the software crisis directly Programs written in functional languages can be built up from smaller parts and they can also be proved correct important when software has to be reliable Moreover a certain amount of parallelism can be extracted from functional languages automatically This book serves as an introduction both to functional programming and Haskell and will be most useful to students teachers and researchers in either of these areas An especially valuable feature are the chapters on programming and implementation along with a large number of exercises   Algebraic and Logic Programming Michael Hanus,Mario Rodriguez-Artalejo,1996-09-30 This book constitutes the refereed proceedings of the Fifth International Conference on Algebraic and Logic Programming ALP 96 held in Aachen Germany in September 1996 in conjunction with PLILP and SAS The volume presents 21 revised full papers selected from 54 submissions also included is an invited contribution by Claude Kirchner and Ilies Alouini entitled Toward the Concurrent Implementation of Computational Systems The volume is divided into topical sections on logic programming term rewriting integration of paradigms abstract interpretation Lambda calculus and rewriting and types   EUROCAL '87 James H. Davenport,James Harold Davenport,1989-08-09 This is the sixth in a series of conference proceedings of international conferences on computer algebra held in Europe All the preceding ones have also been published as Lecture Notes in Computer Science They contain original research material not published elsewhere and a few invited lectures summarising the state of the art Computer

algebra is the science of using computers to do algebraic calculations rather than the purely arithmetic calculations which we all know computers can do These calculations may be polynomial like calculations one thread of the conference was devoted to polynomial algorithms or may relate to other areas of mathematics such as integration the solution of differential equations or geometry a second thread was devoted to those topics The calculations can be applied in a wide range of scientific and engineering subjects and in branches of mathematics Physics has benefitted especially from these calculations and the proceedings contain many papers on this and also papers on applications in computer aided design and robotics to name but a few other applications The third thread of the proceedings was devoted to these applications and to the computer algebra systems which perform these calculations   *Practical Foundations for Programming Languages* Robert Harper,2016-04-04 This book unifies a broad range of programming language concepts under the framework of type systems and structural operational semantics   **Algebraic Specification** J. A. Bergstra,J. Heering,Paul Klint,1989 This book brings together recent research work on algebraic specification AS which aims to provide formal techniques for the specification and prototyping of software   Programming Distributed Systems H. E. Bal,1990   **VDM '88. VDM - The Way Ahead** Robin E. Bloomfield,Lynn S. Marshall,Roger B. Jones,1988   *Algebraic and Logic Programming* Helene Kirchner,Wolfgang Wechler,1990-09-20 This volume consists of papers presented at the Second International Conference on Algebraic and Logic Programming in Nancy France October 1 3 1990   **The Organization of Reduction, Data Flow, and Control Flow Systems** Werner Kluge,1992 In light of research over the last decade on new ways of representing and performing computations this book provides a timely reexamination of computer organization and computer architecture It systematically investigates the basic organizational concepts of reduction data flow and control flow or state transition and their relationship to the underlying programming paradigms For each of these concepts Kluge looks at how princip1es of language organization translate into architectures and how architectural features translate into concrete system implementations comparing them in order to identify their similarities and differences The focus is primarily on a functional programming paradigm based on a full fledged operational calculus and on its realization by various reduction systems Kluge first presents a brief outline of the overall configuration of a computing system and of an operating system kernel introduce elements of the theory of Petrinets as modeling tools for nonsequential systems and processes and use a simple form of higher order Petri nets to identify by means of examples the operational and control disciplines that govern the organization of reduction data flow and control flow computations He then introduces the notions of abstract algorithms and of reductions and includes an overview of the theory of the calculus The next five chapters describe the various computing engines that realize the reduction semantics of a full fledged calculus The remaining chapters provide self contained investigations of the G machine SKI combinator reduction and the data flow approach for implementing the functional programming paradigm This is followed by a detailed description of a typical control flow or von Neumann machine architecture a VAX11 system

Properties of these machines are summarized in the concluding chapter which classifies them according to the semantic models they support   Arrays, Functional Languages, and Parallel Systems Lenore M. Restifo Mullin,2012-12-06 During a meeting in Toronto last winter Mike Jenkins Bob Bernecky and I were discussing how the two existing theories on arrays influenced or were in fluenced by programming languages and systems More s Army Theory was the basis for NIAL and APL2 and Mullin s A Mathematics of A rmys MOA is being used as an algebra of arrays in functional and A calculus based pro gramming languages MOA was influenced by Iverson s initial and extended algebra the foundations for APL and J respectively We discussed that there is a lot of interest in the Computer Science and Engineering communities concerning formal methods for languages that could support massively parallel operations in scientific computing a back to roots interest for both Mike and myself Languages for this domain can no longer be informally developed since it is necessary to map languages easily to many multiprocessor architectures Software systems intended for parallel computation require a formal basis so that modifications can be done with relative ease while ensuring integrity in design List based lan guages are profiting from theoretical foundations such as the Bird Meertens formalism Their theory has been successfully used to describe list based parallel algorithms across many classes of architectures   **Symbolic and Algebraic Computation** Patrizia Gianni,1989-08-23 The ISSAC 88 is the thirteenth conference in a sequence of international events started in 1966 thanks to the then established ACM Special Interest Group on Symbolic and Algebraic Manipulation SIGSAM For the first time the two annual conferences International Symposium on Symbolic and Algebraic Computation ISSAC and International Conference on Applied Algebra Algebraic Algorithms and Error Correcting Codes AAECC have taken place as a Joint Conference in Rome July 4 8 1988 Twelve invited papers on subjects of common interest for the two conferences are included in the proceedings and divided between this volume and the preceding volume of Lecture Notes in Computer Science which is devoted to AAECC 6 This book contains contributions on the following topics Symbolic Algebraic and Analytical Algorithms Automatic Theorem Proving Automatic Programming Computational Geometry Problem Representation and Solution Languages and Systems for Symbolic Computation Applications to Sciences Engineering and Education   PARLE '89 - Parallel Architectures and Languages Europe Eddy Odijk,Martin Rem,1989 Since the first PARLE conference PARLE 87 attracted more than 300 participants it was considered a useful and successful forum and encouraged the organization of this second issue known as PARLE 89 The initiative for these conferences was taken by project 415 of ESPRIT the European Strategic Programme for Research and Development in Information Technology of the Commission of the European Communities Their scope covers central themes in the area of parallel architectures and languages including such topics as concurrent object oriented logic and functional programming MIMD dataflow inference and reduction machines design and verification of parallel systems VLSI WSI and RISC architectures performance evaluation memory management systolic arrays applications and special purpose architectures The four invited lectures present the state of the art and advanced
