[Introduction to Antarctica](#) Gilad James, PhD, Antarctica is the southernmost continent on Earth and it is the fifth largest. It is located at the South Pole in the southern hemisphere and it consists of a glacier-covered landmass surrounded by the Southern Ocean. Antarctica is the coldest, driest and windiest place on Earth with a harsh and extreme environment that makes it difficult for human habitation. However, despite the harsh conditions, Antarctica is home to unique wildlife and natural resources that are of incredible scientific interest. The continent is governed by the Antarctic Treaty System, which promotes scientific cooperation, environmental protection and peaceful relations among the countries that have claimed territories in Antarctica. The Treaty also prohibits military activity, nuclear testing and mineral exploitation, which helps to preserve Antarctica as a pristine and valuable scientific laboratory. Each year, researchers from around the world travel to Antarctica to study its geology, climate and biodiversity, as well as to conduct experiments in astronomy, astrophysics and microbiology. Antarctica is also a popular tourist destination, attracting thousands of visitors who come to experience its stunning scenery, unique wildlife and extreme environment. **Roald Amundsen**

**Great by Choice** Jim Collins,Morten T. Hansen,2011-10-11 The new question Ten years after the worldwide bestseller Good to Great Jim Collins returns with another groundbreaking work this time to ask Why do some companies thrive in uncertainty even chaos and others do not Based on nine years of research buttressed by rigorous analysis and infused with engaging stories Collins and his colleague Morten Hansen enumerate the principles for building a truly great enterprise in unpredictable tumultuous and fast moving times The new study Great by Choice distinguishes itself from Collins s prior work by its focus not just on performance but also on the type of unstable environments faced by leaders today With a team of more than twenty researchers Collins and Hansen studied companies that rose to greatness beating their industry indexes by a minimum of ten times over fifteen years

in environments characterized by big forces and rapid shifts that leaders could not predict or control The research team then contrasted these 10X companies to a carefully selected set of comparison companies that failed to achieve greatness in similarly extreme environments The new findings The study results were full of provocative surprises Such as The best leaders were not more risk taking more visionary and more creative than the comparisons they were more disciplined more empirical and more paranoid Innovation by itself turns out not to be the trump card in a chaotic and uncertain world more important is the ability to scale innovation to blend creativity with discipline Following the belief that leading in a fast world always requires fast decisions and fast action is a good way to get killed The great companies changed less in reaction to a radically changing world than the comparison companies The authors challenge conventional wisdom with thought provoking sticky and supremely practical concepts They include 10Xers the 20 Mile March Fire Bullets Then Cannonballs Leading above the Death Line Zoom Out Then Zoom In and the SMaC Recipe Finally in the last chapter Collins and Hansen present their most provocative and original analysis defining quantifying and studying the role of luck The great companies and the leaders who built them were not luckier than the comparisons but they did get a higher Return on Luck This book is classic Collins contrarian data driven and uplifting He and Hansen show convincingly that even in a chaotic and uncertain world greatness happens by choice not chance
