**Education, Training and the Future of Work I** John Ahier,Geoff Esland,2013-10-18 A central claim of this volume is that public policy in education and training can only be properly understood if it is seen in relation to prevailing economic and employment conditions It has become increasingly apparent that the neo liberal economic policies pursued by Western governments during the 1980s and 1990s have led to a growing world wide work crisis Unemployment levels particularly in Europe remain persistently high and for those in employment job insecurity and long working hours have become the norm The response of UK governments has been to promote flexibility in employment practices while proclaiming the importance of improving skill levels through education and training This volume challenges the adequacy of such an approach and asks whether reliance on education and training reforms without additional political intervention in economic processes is capable of reversing current trends Issues covered in this reader include the impact of globalization on employment trends neo liberal and neo Keynesian approaches to employment policy political reforms in education and training institutions the impact of flexibilization on private life and the family The two volumes in this series are readers for the Open University

course Education Training and the Future of Work E837 a module of the MA in Education The companion volume is Education Training and the Future of Work II Developments in Vocational Education and Training John Ahier is Lecturer in Education at the Open University Geoff Esland is Director of the Centre for Sociology and Social Research at the Open University and Course team Chair of E837 **HRM, Artificial Intelligence and the Future of Work** Olatunji David

Workers Think? Mr. Carlos Mulas-Granados, Richard Varghese, Vizhdan Boranova, Alice deChalendar, Judith Wallenstein, 2019-12-20 We exploit a survey data set that contains information on how 11 000 workers across advanced and emerging market economies perceive the main forces shaping the future of work In general workers feel more positive than negative about automation especially in emerging markets We find that negative perceptions about automation are prevalent among workers who are older poorer more exposed to job volatility and from countries with higher levels of robot penetration Perceptions over automation are positively viewed by workers with higher levels of job satisfaction higher educational attainment and from countries with stronger labor protection Workers with positive perceptions of automation also tend to respond that re education and retraining will be needed to adapt to rapidly evolving skill demands These workers expect governments to have a role in shaping the future of work through protection of labor and new forms of social benefits The demand for protection and benefits is more significant among women and workers that have suffered job volatility
