Gaian Systems Bruce Clarke,2020-09-29 A groundbreaking look at Gaia theory s intersections with neocybernetic systems theory Often seen as an outlier in science Gaia has run a long and varied course since its formulation in the 1970s by atmospheric chemist James Lovelock and microbiologist Lynn Margulis Gaian Systems is a pioneering exploration of the dynamic and complex evolution of Gaia s many variants with special attention to Margulis s foundational role in these developments Bruce Clarke assesses the different dialects of systems theory brought to bear on Gaia discourse Focusing in particular on Margulis s work including multiple pieces of her unpublished Gaia correspondence he shows how her research and that of Lovelock was concurrent and conceptually parallel with the new discourse of self referential systems that emerged within neocybernetic systems theory The recent Gaia writings of Donna Haraway Isabelle Stengers and Bruno Latour contest its cybernetic status Clarke engages Latour on the issue of Gaia s systems description and extends his own systems theoretical synthesis under what he terms metabiotic Gaia This study illuminates current issues in neighboring theoretical conversations from biopolitics and the immunitary paradigm to NASA astrobiology and the Anthropocene Along the way he points to science fiction as a vehicle of Gaian thought Delving into many issues not previously treated in accounts of Gaia Gaian Systems describes the history of a theory that has the potential to help us survive an environmental crisis of

our own making *Ireland and Ecocriticism* Eóin Flannery,2015-10-05 This book is the first truly interdisciplinary intervention into the burgeoning field of Irish ecological criticism Providing original and nuanced readings of Irish cultural texts and personalities in terms of contemporary ecological criticism Flannery's readings of Irish literary fiction poetry travel writing non fiction and essay writing are ground breaking in their depth and scope Explorations of figures and texts from Irish cultural and political history including John McGahern Derek Mahon Roger Casement and Tim Robinson among many others enable and invigorate the discipline of Irish cultural studies and international ecocriticism on the whole This book addresses the need to impress the urgency of lateral ecological awareness and responsibility among Irish cultural and political commentators to highlight continuities and disparities between Irish ecological thought writing and praxis and those of differential international writers critics and activists and to establish both the singularity and contiguity of Irish ecological criticism to the wider international field of ecological criticism With the introduction of concepts such as ecocosmopolitanism deep history ethics of proximity Gaia Theory urban ecology and postcolonial environmentalism to Irish cultural studies it takes Irish cultural studies in bracing new directions Flannery furnishes working examples of the necessary interdisciplinarity of ecological criticism and impresses the relevance of the Irish context to the broader debates within international ecological criticism Crucially the volume imports ecological critical paradigms into the field of Irish studies and demonstrates the value of such conceptual dialogue for the future of Irish cultural and political criticism This pioneering intervention exhibits the complexity of different Irish cultural and historical responses to ecological exploitation degradation and social justice *The Human Capacity for Transformational Change* Valerie A. Brown,John A. Harris,2014-02-24

Pressures for transformational change have become a regular feature of most fields of human endeavour Master thinkers and visionaries alike have reframed existing divisions as connecting relationships bringing together as dynamic systems the supposed opposites of parts and wholes stability and change individuals and society and rational and creative thinking This reframing of opposites as interconnected wholes has led to realisation of the power of a collective mind This book offers ways and means of creating the synergies that are crucial in influencing a desired transformational change towards a just and sustainable future It describes how and why our current decision making on any complex issue is marked by clashes between the different interests involved More optimistically the book pursues a mode of thinking that brings together government specialised and community interests at the local regional and personal scales in a collective transformation process Practical examples signal the emergence of a new knowledge tradition that promises to be as powerful as the scientific enlightenment Written in accessible language this book will be insightful reading for anyone struggling with transformational change especially researchers students and professionals in the fields of administration governance environmental management international development politics public health public law sociology and community development **The Science of Oneness** Malcolm Hollick,2011-03-16 The Science of Oneness weaves modern science together with experiential spiritual

and cultural knowledge It presents a scientifically valid vision of reality that is conscious creative loving and purposeful It balances openness to all sources of knowledge with critical evaluation of their reliability Each chapter offers experiential activities thought provoking questions and guided meditations to stimulate intuitive understanding It provides a coherent world view for cultural creatives and the holism movement

Nature's Web Peter Marshall,2015-02-12 This powerful book provides the first comprehensive overview of the intellectual roots of the worldwide environmental movement from ancient religions and philosophies to modern science and ethics and synthesizes them into a new philosophy of nature in which to ground our moral values and social action It traces the origins and evolution of the dominant worldview that has built our industrial technocratic man centered civilization and brought us to the current ecological crisis At the same time it uncovers an alternative cultural tradition in the world s different religions and philosophies and describes how these ideas are now surfacing and coalescing to form an ecological sensibility and a new vision of nature which recognizes the inter relatedness of all living things Finally this book integrates these varied traditions with modern physics and the science of ecology into a larger philosophical whole that provides the environmental movement with a comprehensive vision of an organic and sustainable society in harmony with nature As ecological disasters continue to threaten our planet becoming worse with every passing moment of indifference it has become clear that we must take action We must change our relationship with nature and return to the days when our lives were intimately connected to and dependent upon the natural world Nature s Web lays the foundations for that change by explaining where our complex ideas about nature come from why they are wrong and what we can do to change them

No Matter What Catherine Keller,2024-12-03 A collection of essays that outline the recent work on ecology political theology religion and philosophy by one of the leading theologians of our age As we face relentless ecological destruction spiraling around a planet of unconstrained capitalism and democratic failure what matters most How do we get our bearings and direct our priorities in such a terrestrial scenario Species race sex politics and economics will increasingly come tangled in the catastrophic trajectory of climate change With a sense of urgency and of possibility Catherine Keller s No Matter What reflects multiple trajectories of planetary crisis They converge from a point of view formed of the political ecologies of a transdisciplinary theological pluralism In its work an ancient symbolism of apocalypse deconstructs end of the world narratives Christian and secular even as any notion of an all controlling and good God collapses under the force of internal contradiction In the place of a once for all incarnation the materiality of unbounded interarnation of fragile yet animating relations of mattering earth bodies comes into focus The essays of No Matter What share the preoccupation with matter characteristic of the so called new materialism They also root in an older ecotheological tradition one that has long struggled against the undead legacy of an earth betraying theology that with the aid of its white Christian right wing invests the denigration of matter its spirit of no

matter in limitless commodification The fragile alternative Keller outlines here embraces no matter what the mattering of the life of the Earth and of all its spirited bodies These essays struggling against Christian and secular betrayals of the spirited matter of Earth work to materialize the still possible planetary healing Exploring Earthiness Anne Primavesi,2014-08-28 If we see ourselves as Earth rather than Earth as existing for us our perspective is transformed A variety of religious philosophical cultural and political self perceptions that dominate our sense of human identity are deeply challenged by this shift in perspective John Locke s doctrine of Earth as human property has been central to current presuppositions about our selves justified on the grounds of our possessing unique divinely bestowed rational abilities But today the effects of that doctrine on Earth s resource base and on its other than human creatures directly challenge such assumptions At the same time contemporary scientific findings about the evolution of Earthly life demonstrate that while we belong to Earth and nowhere else Earth does not belong to us Exploring this role reversal raises fundamental questions about current theological philosophical scientific and economic presuppositions that underpin the business as usual viewpoint and human centered aims of contemporary policies and lifestyles It takes us beyond hierarchical Christian and philosophical doctrines toward a deeper Earth focused and peace based understanding of what it means to be human today *Science in Civil Society* John Ziman,2016-09-22 These days science is everywhere It pervades our whole society Sometimes it is just a clutter of commonplace frivolities like new fashion fabrics Sometimes it miraculously preserves our life like penicillin Sometimes like climate change it looms over us as a portent of doom sometimes it promises a way of escape from such a fate Sometimes like a nuclear warhead it enshrouds us in political terror sometimes like a verification technology it offers an antidote to such evils How should we respond to this ambiguous and ubiquitous thing called science **Climate Change** Brian C. Black,David M. Hassenzahl Ph.D.,Jennie C. Stephens,Gary J. Weisel,Nancy Gift,2013-01-08 This book provides a holistic consideration of climate change that goes beyond pure science fleshing out the discussion by considering cultural historical and policy driven aspects of this important issue Climate change is a controversial topic that promises to reframe rudimentary ideas about our world and how we will live in it The articles in *Climate Change An Encyclopedia of Science and History* are designed to inform readers decision making through the insight of scholars from around the world each of whom brings a unique approach to this topic The work goes beyond pure science to consider other important factors weighing the cultural historical and policy driven contributors to this issue In addition the book explores the ideas that have converged and evolved in order to clarify our current predicament By considering climate change in this holistic fashion this reference collection will prepare readers to consider the issue from every angle Each article in the work is suitable for general readers particularly students in high school and college and is intended to inform and educate anyone about climate change providing valuable information regarding the stages of mitigation and adaptation that are occurring all around us **Not in His Image** John Lamb Lash,2006-11-15 Lash is capable of explaining the mind bending concepts of Gnosticism and pagan

mystery cults with bracing clarity and startling insight His arguments are often lively and entertaining Los Angeles Times In Not in His Image John Lamb Lash explains how a little known messianic sect propelled itself into a dominant world power systematically wiping out the great Gnostic spiritual teachers the Druid priests and the shamanistic healers of Europe and North Africa Early Christians burned libraries and destroyed temples in an attempt to silence the ancient truth tellers and keep their own secrets But as Lash reveals the truth cannot be hidden or destroyed Not in His Image delves deeply into the shadows of ancient Gnostic writings to reconstruct the story early Christians tried to scrub from the pages of history exploring the richness of the ancient European Pagan spirituality the Pagan Mysteries the Great Goddess Gnosis the myths of Sophia and Gaia Long before the birth of Christianity monotheism was an anomaly Europe and the Near East flourished under the divine guidance of Sophia the ancient goddess of wisdom The Earth was the embodiment of Sophia and thus sacred to the people who sought fulfillment in her presence This ancient philosophy was threatening to the emerging salvation based creed of Christianity that was based on patriarchal dominion over the Earth and lauded personal suffering as a path to the afterlife As Derrick Jensen points out in the afterword in Lash s hands Jesus Christ emerges as the agent provocateur of the ruling classes Sometimes a book changes the world Not in His Image is such a book It is clear stimulating well researched and sure to outrage the experts Get it Improve not just your own life but civilization s chances for survival Roger Payne author of Among Whales Gaia James E. Lovelock, James Lovelock, 2000-09-28 This classic work is reissued with a new preface by the author Written for non scientists the idea is put forward that life on Earth functions as a single organism **Global Environmental History** Ian G Simmons, 2008-03-05 Courses which deal with environmental history have long lacked a comprehensive overview I G Simmons has made a significant contribution with a book that looks at the long term history of environment and humanity from 10 000 BC to AD 2000 This far reaching text considers the global picture and recognises the contributions of many disciplines including the natural sciences the social sciences and increasingly the humanities As a starting point this book takes the major phases of human technological evolution of the last 12 000 years and considers how these have affected the natural world It then considers the response to conditions such as climate change putting today s preoccupations into a long term perspective This is a book of history not prophecy and so makes no judgements on current anxieties **Yoga Journal** , 1992-03 For more than 30 years Yoga Journal has been helping readers achieve the balance and well being they seek in their everyday lives With every issue Yoga Journal strives to inform and empower readers to make lifestyle choices that are healthy for their bodies and minds We are dedicated to providing in depth thoughtful editorial on topics such as yoga food nutrition fitness wellness travel and fashion and beauty **Ecopolis** Paul F. design future cities which are genuinely sustainable Paul Downton's *Ecopolis* takes a major step along this path It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences
