Galvani Commentary Of The Effect Of Electricity And Muscular Motion:

Commentary of the effects of electricity on muscular motion. Translated into English by Margaret Glover Foley... Introduction by I. Bernard Cohen. Together with a facsimile of Galvani's *De viribus electricitatis in motu musculari commentarius* (1791) and a Bibliography of the editions and translations of Galvani's book prepared by John Farquhar Fulton and Madeline E. Stanton Madeline E. Stanton, Luigi Galvani, Bernard Cohen, 1953 **The 17th and 18th Centuries** Frank N. Magill, 2013-09-13 Each volume of the Dictionary of World Biography contains 250 entries on the lives of the individuals who shaped their times and left their mark on world history This is not a who's who Instead each entry provides an in depth essay on the life and career of the individual concerned Essays commence with a quick reference section that provides basic facts on the individual's life and achievements The extended biography places the life and works of the individual within an historical context and the summary at the end of each essay provides a synopsis of the individual's place in history All entries conclude with a fully annotated bibliography *Commentary on the Effect of Electricity on Muscular Motion. (A Translation of Luigi Galvani's *De Viribus Electricitatis in Motu Musculari Commentarius*.) By Robert Montraville Green. [Translated from the Edition Published in 1792 by Giovanni Aldini, Together with a Translation of Aldini's Introductory Dissertation and an Introduction by Giulio C. Pupilli.].* Luigi GALVANI (Professor at the Institute of Bologna.), Giovanni Aldini, Robert Montraville GREEN, 1953 *Commentary on the Effect of Electricity on Muscular Motion* Luigi Galvani, Giovanni Aldini, 1953 Observation and Experiment in the Natural and Social Sciences Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century Convicted that only the context of justification is pertinent to philosophy of science logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation **A Concise Companion to the Romantic Age** Jon Klancher, 2009-04-06 A Concise Companion to the Romantic Age provides new perspectives on the

relationships between literature and culture in Britain from 1780 to 1830 Provides original essays from a variety of multidisciplinary scholars on the Romantic era Includes fresh insights into such topics as religious controversy and politics empire and nationalism and the relationship of Romanticism to modernist aesthetics Ranges across the Romantic era's literary visual and non-fictional genres **Literature, Electricity and Politics 1740-1840** Mary Fairclough, 2017-03-27 This book

investigates the science of electricity in the long eighteenth century and its textual life in literary and political writings Electricity was celebrated as a symbol of enlightened progress but its operation and its utility were unsettlingly obscure As a result debates about the nature of electricity dovetailed with discussions of the relation between body and soul the nature of sexual attraction the properties of revolutionary communication and the mysteries of vitality This study explores the complex textual manifestations of electricity between 1740 and 1840 in which commentators describe it both as a material force and as a purely figurative one The book analyses attempts by both elite and popular practitioners of electricity to elucidate the mysteries of electricity and traces the figurative uses of electrical language in the works of writers including Mary Robinson Edmund Burke Erasmus Darwin John Thelwall Mary Shelley and Richard Carlile Boffinology Justin Pollard, 2010-09-02 The history of science is often seen as a story of advancement but nothing could be further from the truth Science it is true has progressed but rarely in the direction intended and seldom for the reasons given This has a lot to do with the people responsible From the strange to the eccentric meet Thales credited as the father of science whose only real claim to fame is that he often fell into ditches discover how Archimedes never said Eureka and hated baths anyway and how the most lucrative ancient Greek invention was not democracy but the slot machine Justin Pollard also fills us in on Issac Newton who thought gravity was created by the Holy Spirit how eleven people claimed to have invented the steam engine and why the first website was twelve foot across and made of wood **Haunted Media** Jeffrey Sconce, 2000 Examines the repeated

association of new electronic media with spiritual phenomena from the telegraph in the late 19th century to television The Idea of the Brain Matthew Cobb, 2020-04-21 An elegant engrossing Carol Tavris Wall Street Journal examination of what we think we know about the brain and why despite technological advances the workings of our most essential organ remain a mystery I cannot recommend this book strongly enough Henry Marsh author of Do No Harm For thousands of years thinkers and scientists have tried to understand what the brain does Yet despite the astonishing discoveries of science we still have only the vaguest idea of how the brain works In The Idea of the Brain scientist and historian Matthew Cobb traces how our conception of the brain has evolved over the centuries Although it might seem to be a story of ever increasing knowledge of biology Cobb shows how our ideas about the brain have been shaped by each era's most significant technologies Today we might think the brain is like a supercomputer In the past it has been compared to a telegraph a telephone exchange or some kind of hydraulic system What will we think the brain is like tomorrow when new technology arises The result is an essential read for anyone interested in the complex processes that drive science and the forces that

have shaped our marvelous brains Technological Visions Marita Sturken,Douglas Thomas,Sandra Ball-Rokeach,2004 For as long as people have developed new technologies there has been debate over the purposes shape and potential for their use In this exciting collection a range of contributors including Sherry Turkle Lynn Spigel John Perry Barlow Langdon Winner David Nye and Lord Asa Briggs discuss the visions that have shaped new technologies and the cultural implications of technological adaptation Focusing on issues such as the nature of prediction community citizenship consumption and the nation as well as the metaphors that have shaped public debates about technology the authors examine innovations past and present from the telegraph and the portable television to the Internet to better understand how our visions and imagination have shaped the meaning and use of technology Author note Marita Sturken is Associate Professor in the Annenberg School for Communication at the University of Southern California and the author of Tangled Memories The Vietnam War the AIDS Epidemic and the Politics of Remembering and Practices of Looking An Introduction to Visual Culture with Lisa Cartwright Douglas Thomas is Associate Professor in the Annenberg School for Communication at the University of Southern California He is author of three books most recently Hacker Culture Sandra Ball Rokeach is a Professor and Director of the Communication Technology and Community Program in the Annenberg School for Communication at the University of Southern California She is author of several books including Theories of Mass Communication with M L De Fleur The Biomedical Engineering Handbook Joseph D. Physiology and Electrochemistry of Nerve Fibers Ichiji Tasaki,2012-12-02 Physiology and Electrochemistry of Nerve Fibers explores the properties of nerve fibers including morphology biochemistry and physical chemistry The book also makes an effort to trace the origins of the concepts that are important in studying the physiology of the nerve fibers The text covers the early studies of electrochemistry the different theories regarding nerve excitation the conduction of nerve impulses along different nerve fibers and the behavior of impulses in myelinated nerve fibers and its electrical excitation The book also discusses the emergence morphology and biochemistry of the squid giant axon as well as further studies about it macromolecular transitions the physiochemical approach and model and the electrochemical considerations of the classical membrane theory The monograph is intended for doctors specializing in neurology psychologists and psychiatrists who wish to know more about nerve fibers their structure chemical properties functions and the theories behind it as well as its transmission of electrical impulses *Making the Monster* Kathryn Harkup,2018-02-08 A thrilling and gruesome look at the

science that influenced Mary Shelley's *Frankenstein*. The year 1818 saw the publication of one of the most influential science fiction stories of all time. *Frankenstein, or The Modern Prometheus* by Mary Shelley had a huge impact on the gothic horror and science fiction genres and her creation has become part of our everyday culture from cartoons to Halloween costumes. Even the name *Frankenstein* has become a byword for evil scientists and dangerous experiments. How did a teenager with no formal education come up with the idea for such an extraordinary novel? Clues are dotted throughout Georgian science and popular culture. The years before the book's publication saw huge advances in our understanding of the natural sciences in areas such as electricity and physiology for example. Sensational science demonstrations caught the imagination of the general public while the newspapers were full of lurid tales of murderers and resurrectionists. *Making the Monster* explores the scientific background behind Mary Shelley's book. Is there any science fact behind the science fiction? And how might a real-life Victor Frankenstein have gone about creating his monster? From tales of volcanic eruptions, artificial life and chemical revolutions to experimental surgery, monsters and electrical experiments on human cadavers, Kathryn Harkup examines the science and scientists that influenced Shelley and inspired her most famous creation.

Circulation of the Blood Alfred P. Fishman, Dickinson W. Richards, 2013-05-26 Capturing the real spirit of creativity in physiology, this book explores the personal elements involved in scientific discovery. *Circulation of the Blood* is the story of the people and achievements that have changed the way we've come to view the human body. The authors, renowned for their extensive experience in the field, examine the heritage of creative genius involved in physiology and trace the historical development of ideas relating to various aspects of circulation of the blood. Their comprehensive coverage goes from the early discoveries of the Greeks and Romans up to modern times.

Xenopus Abraham Fainsod, Sally A. Moody, 2022-04-19 This book focuses on the amphibian *Xenopus*, one of the most commonly used model animals in the biological sciences. Over the past 50 years, the use of *Xenopus* has made possible many fundamental contributions to our knowledge in cell biology, developmental biology, molecular biology and neurobiology. In recent years, with the completion of the genome sequence of the main two species and the application of genome editing techniques, *Xenopus* has emerged as a powerful system to study fundamental disease mechanisms and test treatment possibilities. *Xenopus* has proven an essential vertebrate model system for understanding fundamental cell and developmental biological mechanisms, for applying fundamental knowledge to pathological processes, for deciphering the function of human disease genes and for understanding genome evolution.

Key Features Provides historical context of the contributions of the model system. Includes contributions from an international team of leading scholars. Presents topics spanning cell biology, developmental biology, genomics and disease model. Describes recent experimental advances. Incorporates richly illustrated diagrams and color images.

Animal Capital Nicole Shukin, 2009 The juxtaposition of biopolitical critique and animal studies two subjects seldom theorized together signals the double edged intervention of Animal Capital Nicole Shukin pursues a resolutely materialist engagement with the question of the animal challenging the philosophical idealism that has dogged the question by tracing how the politics of capital and of animal life impinge on one another in market cultures of the twentieth and early twenty first centuries

Origins of Neuroscience Stanley Finger, 2001 With over 350 illustrations this impressive volume traces the rich history of ideas about the functioning of the brain from its roots in the ancient cultures of Egypt Greece and Rome through the centuries into relatively modern times In contrast to biographically oriented accounts this book is unique in its emphasis on the functions of the brain and how they came to be associated with specific brain regions and systems Among the topics explored are vision hearing pain motor control sleep memory speech and various other facets of intellect The emphasis throughout is on presenting material in a very readable way while describing with scholarly acumen the historical evolution of the field in all its amazing wealth and detail From the opening introductory chapters to the concluding look at treatments and therapies this monumental work will captivate readers from cover to cover It will be valued as both an historical reference and as an exciting tale of scientific discovery It is bound to attract a wide readership among students and professionals in the neural sciences as well as general readers interested in the history of science and medicine

Electricity and Experimental Physics in Eighteenth-Century Europe R.W. Home, 2024-10-28 At the beginning of the 18th century there was no science of physics as we recognise it today by the early years of the nineteenth century there was The articles in this volume are concerned with the process by which this came about They focus in particular on the rise of experimental physics and the interactions between experiment theory and mathematics in the study of electricity and to a lesser extent magnetism and physical optics during this period Along the way they provide a significant reassessment of Isaac Newton's influence on the science of his successors A further recurring theme is the process by which ideas were disseminated within the expanding scientific community of the day and the manner of their reception often in a form

somewhat different from that envisaged by their first inventors as Professor Home argues took place in the case of Franklin. The social and intellectual context of the scientist indeed is the specific subject of several essays dealing not only with England and France but also offering new insights into the position of science in 18th century Russia.
