3D/4D Geoinformation Systems Martin Breunig, 2008-01-26 The book deals with two central themes data modeling and management for 3D objects during different time states and the opening of geoinformation systems to a new generation of component based GIS. The way from first geo database kernel systems to a component based GeoToolKit is presented. Furthermore the implementation of a component based GIS with geological and geophysical applications is described. With the common data access to a geo database the geological and the geophysical application are brought closer together and profit from each others interpretations of the data. *Geographical Information Systems and Computer Cartography* Chris B. Jones, 2014-05-01 A concise text presenting the fundamental concepts in Geographical Information Systems GIS emphasising an understanding of techniques in management analysis and graphic display of spatial information. Divided into five parts the first part reviews the development and application of GIS followed by a summary of the characteristics and representation of geographical information. It concludes with an overview of the functions provided by typical GIS systems.
