Geometric Constraints For Object Detection And Delineation:

Geometric Constraints for Object Detection and Delineation Jefferey Shufelt, 2013-11-11 The ability to extract generic 3D objects from images is a crucial step towards automation of a variety of problems in cartographic database compilation industrial inspection and assembly and autonomous navigation Many of these problem domains do not have strong constraints on object shape or scene content presenting serious obstacles for the development of robust object detection and delineation techniques *Geometric Constraints for Object Detection and Delineation* addresses these problems with a suite of novel methods and techniques for detecting and delineating generic objects in images of complex scenes and applies them to the specific task of building detection and delineation from monocular aerial imagery PIVOT the fully automated system implementing these techniques is quantitatively evaluated on 83 images covering 18 test scenes and compared to three existing systems for building extraction The results highlight the performance improvements possible with rigorous photogrammetric camera modeling primitive based object representations and geometric constraints derived from their combination PIVOT s performance illustrates the implications of a clearly articulated set of philosophical principles taking a significant step towards automatic detection and delineation of 3D objects in real world environments *Geometric Constraints for Object Detection and Delineation* is suitable as a textbook or as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry *Automatic Extraction of Man-made Objects from Aerial and*
