Johnson, 2021-07-01 This book is the first volume of a comprehensive assemblage of contemporary knowledge relevant to genomics and other omics in date palm. Volume 1 consists of 11 chapters arranged in 3 parts grouped according to subject. Part I Biology and Phylogeny focuses on date palm biology, evolution and origin. Part II Biodiversity and Molecular Identification covers conformity of in vitro derived plants, molecular markers, barcoding, pollinizer genetics and gender determination. Part III Genome Mapping and Bioinformatics addresses genome mapping of nuclear, chloroplast and mitochondrial DNA in addition to a chapter on progress made in date palm bioinformatics. This volume represents the efforts of 30 international scientists from 10 countries and contains 78 figures and 30 tables to illustrate presented concepts. Volume 2 is published under the title Omics and Molecular Breeding.

Advances in Molecular Genetics of Plant-Microbe Interactions, Vol.1 H. Hennecke, Desh Pal S. Verma, 2013-06-29 Research on the interaction between plants and microbes has attracted considerable attention in recent years. The use of modern genetic techniques has now made possible a detailed analysis both of plant and of microbial genes involved in phytopathogenic and beneficial interactions. At the biochemical level, signal molecules and their receptors, either of plant or of microbial origins, have been detected which act in signal transduction pathways or as co-regulators of gene expression. We begin to understand the molecular basis of classical concepts such as gene-for-gene relationships, hypersensitive response, induced resistance, to name just a few. We realize and will soon exploit the tremendous potential of the results of this research for practical application in particular to protect crop plants against diseases and to increase crop yield and quality. This exciting field of research, which is also of truly interdisciplinary nature, is expanding rapidly. A Symposium series has been devoted to it which began in 1982. Recently the 5th International Symposium on the Molecular Genetics of Plant-Microbe Interactions was held in Interlaken, Switzerland. It brought together 640 scientists from almost 30 different countries who reported their latest research progress in 47 lectures, 10 short oral presentations and on over 400 high quality posters. This book presents a collection of papers that comprehensively reflect the major areas under study, explain novel experimental approaches currently in use, highlight significant advances made over the last one or two years, but also emphasize the obstacles still ahead of us.

Plant Genome Diversity Volume 1 Jonathan Wendel, Johann Greilhuber, Jaroslav Dolezel, Ilia J. Leitch, 2012-03-26 In this timely new 2 volume treatise, experts from around the world have banded together to produce a first of its kind synopsis of the exciting and fast moving field of plant evolutionary genomics. In Volume I of Plant Genome Diversity, an update is provided on what we have learned from plant genome sequencing projects. This is followed by more focused chapters on the various genomic residents of plant genomes including transposable elements, centromeres, small RNAs and the evolutionary dynamics.

of genes and non coding sequences Attention is drawn to advances in our understanding of plant mitochondrial and plastid genomes as well as the significance of duplication in genic evolution and the non independent evolution among sequences in plant genomes Finally Volume I provides an introduction to the vibrant new frontier of plant epigenomics describing the current state of our knowledge and the evolutionary implications of the epigenomic landscape **population genetics and ecology** Samuel Karlin,2012-12-02 Population Genetics and Ecology is a collection of papers presented at a 1975 conference workshop held in Israel and is devoted to topics in population genetics and ecology Contributors discuss topics related to population genetics and ecology including the determinants of genetic variation in natural populations experimental design and analysis of field and laboratory data and theory and applications of mathematical models in population genetics The book describes a number of field and laboratory studies that focus on a variety of spatial and temporal character and enzyme frequency patterns in natural populations along with possible associations between these patterns and ecological parameters This volume is organized into three sections encompassing 31 chapters and begins by summarizing the results of field and laboratory research that investigated gene frequency patterns in space and time of animal and plant populations This book then explains the origin of new taxa animal and plant domestication variation in heritability related to parental age and problems in the genetics of certain haplo diploid populations The next section offers a combination of data analyses and interpretations of related models with some papers devoted to the origin of race formation and the interaction between sexual selection and natural selection Among the theoretical studies presented are facets of selection migration interaction stochastic selection effects properties of density and frequency dependent selection concepts and measures of genetic distance and speciation aspects of altruism and kin selection This book will be of interest to naturalists experimentalists theoreticians statisticians and mathematicians *Progress in Nucleic Acid Research and Molecular Biology* ,1973-04-18 Progress in Nucleic Acid Research and Molecular Biology *Current Catalog* National Library of Medicine (U.S.),1983 First multi year cumulation covers six years 1965 70 **India as an Organization: Volume One** Dipak Basu,Victoria Miroshnik,2017-08-07 This book is an analysis of the political and philosophical foundations of the development of India s economy including discussions of what s gone wrong in the past and what can be done to rectify it The authors provide a detailed analysis of the history and burning issues derived from these historical analysis which are still unresolved today As well as this there are analyses of the political economy and both ancient and modern historical perspectives Twentieth Century Mouse Genetics Robert P. Handbook of Genetics Robert King, 2012-12-06 Many modern geneticists attempt to elucidate the molecular basis of phenotype by utilizing a battery of techniques derived from physical chemistry on subcellular components isolated from various species of organisms Volume 5 of the Handbook of Genetics provides explanations of the advantages and shortcomings of some of these revolutionary techniques and the nonspecialist is alerted to key research papers reviews and reference works Much of the text deals with the structure and functioning of the molecules bearing genetic information which reside in the nucleus and with the processing of this information by the ribosomes residing in the cytoplasm of eukaryotic cells The mitochondria which also live in the cytoplasm of the cells of all eukaryotes now appear to be separate little creatures These as Lynn Margulis pointed out in Volume 1 are the colonial posterity of migrant prokaryotes probably primitive bacteria that swam into the ancestral precursors of all eukaryotic cells and remained as symbionts They have maintained themselves and their ways ever since replicating their own DNA and transcribing an RNA quite different from that of their hosts In a similar manner the chloroplasts in all plants are self replicating organelles presumably derived from the blue green algae with their own nucleic acids and ribosomes Four chapters are devoted to the nucleic acids and the ribosomal components of both classes of these semi independent lodgers Finally data from various sources on genetic variants of enzymes are tabulated for ready reference and an evaluation of this information is attempted

Mechanisms in Recombination Rhoda Grell, 2012-12-06 This book contains the papers presented at the Twenty Seventh Annual Biology Division Research Conference which was held April 1-4 1974 in Gatlinburg Tennessee The topic of the symposium was Mechanisms in Recombination and it follows by exactly twenty years the previous Gatlinburg Symposium on Genetic Recombination During this interval and the preceding years as well the process of recombination has remained a central and tantalizing problem for geneticists The subject assumes added significance with the recent appeal by a committee of leading scientists for a moratorium on the construction of certain types of recombinant molecules That autonomously replicating molecules linking portions of pro karyotic and eukaryotic DNA can now be produced in vitro attests

to the technical advances that have taken place in this field Nevertheless the details underlying the process in vivo continue to be elusive This symposium brought together individuals studying recombination in organisms as widely separated as bacteriophage and mammals and using disciplinary approaches of comparable diversity Consequently the present volume summarizes much of current strategies and concepts concerning the subject The meeting was sponsored by the Biology Division of the Oak Ridge National Laboratory operated by the Union Carbide Corporation for the U S Atomic Energy Commission with the support and encouragement of its director H I Adler The organizing committee was chaired by J K Setlow and included R F Grell R D Hotchkiss and E Volkin Special thanks are due to the speakers to I R
