Geocomputation A Primer:

Geocomputation Paul Longley, 1998-11-09 Geocomputation A Primer edited by Paul A Longley Sue M Brooks Rachael McDonnell School of Geographical Sciences University of Bristol UK and Bill Macmillan School of Geography University of Oxford UK This book encompasses all that is new in geocomputation It is also a primer that is a book which sets out the foundations and scope of this important emergent area from the same contemporary perspective The catalyst to the emergence of geocomputation is the new and creative application of computers to devise and depict digital representations of the Earth's surface The environment for geocomputation is provided by geographical information systems GIS yet geocomputation is much more than GIS Geocomputation is a blend of research led applications which emphasise process over form dynamics over statics and interaction over passive response This book presents a timely blend of current research and practice written by the leading figures in the field It provides insights to a new and rapidly developing area and identifies the key foundations to future developments It should be read by all who seek to use geocomputational methods for solving real world problems

Geocomputation Chris Brunsdon, Alex Singleton, 2015-01-22 Geocomputation is the use of software and computing power to solve complex spatial problems It is gaining increasing importance in the era of the big data revolution of smart cities of crowdsourced data and of associated applications for viewing and managing data geographically like Google Maps This student focused book Provides a selection of practical examples of geocomputational techniques and hot topics written by world leading practitioners Integrates supporting materials in each chapter such as code and data enabling readers to work through the examples themselves Chapters provide highly applied and practical discussions of Visualisation and exploratory spatial data analysis Space time modelling Spatial algorithms Spatial regression and statistics Enabling interactions through the use of neogeography All chapters are uniform in design and each includes an introduction case studies conclusions drawing together the generalities of the introduction and specific findings from the case study application and guidance for further reading This accessible text has been specifically designed for those readers who are new to Geocomputation as an area of research showing how complex real world problems can be solved through the integration of technology data and geocomputational methods This is the applied primer for Geocomputation in the social sciences

Spatial Information Theory: Foundations of Geographic Information Science Daniel R. Montello,2003-06-30 The 5th International Conference on Spatial Information Theory COSIT 2001 took place at the Inn at Morro Bay California USA September 19 23 2001 COSIT grew out of a series of workshops NATO Advanced Study Institutes NSF Specialist Meetings during the 1990s concerned with theoretical and applied aspects of representing large scale space particularly geographic or environmental space this history is elaborated in the prefaces of previous COSIT proceedings These are spaces in which and on which human action takes place and which are represented and processed in digital geographic information systems In these early meetings the need for well founded theories of spatial information representation and processing was identified particularly theories based on cognition and on computation This concern for theory provided an early foundation for the newly emerging field of geographic information science COSIT is not backed by any particular scientific society but is organized as an independent enterprise The conference series was established in 1993 as an interdisciplinary biennial European conference on the representation and processing of large scale spatial information after a successful international conference on the topic had been organized by Andrew Frank et al in Pisa in 1992 frequently referred to as COSIT 0 After two successful European COSIT conferences with strong North American participation COSIT 93 Island of Elba Italy COSIT 95 Semmering Austria COSIT 97 moved across the pond to the United States and was held in the Laurel Highlands Pennsylvania

High Performance Computing and the Art of Parallel Programming Stan Openshaw,Ian Turton,2005-09-19 This book provides a non technical introduction to High Performance Computing applications together with advice about how beginners can start to write parallel programs The authors show

what HPC can offer geographers and social scientists and how it can be used in GIS They provide examples of where it has already been used and suggestions for other areas of application in geography and the social sciences Case studies drawn from geography explain the key principles and help to understand the logic and thought processes that lie behind the parallel programming *Journal on Data Semantics III*, 2007-05-22 semantic caching data warehousing and semantic data mining spatial temporal multimedia and multimodal semantics semantics in data visualization semantic services for mobile users supporting tools applications of semantic driven approaches These topics are to be understood as specifically related to semantic issues Contributions submitted to the journal and dealing with semantics of data will be considered even if they are not within the topics in the list While the physical appearance of the journal issues looks like the books from the well known Springer LNCS series the mode of operation is that of a journal Contributions can be freely submitted by authors and are reviewed by the Editorial Board Contributions may also be invited and nevertheless carefully reviewed as in the case for issues that contain extended versions of best papers from major conferences addressing data semantics issues Special issues focusing on a specific topic are coordinated by guest editors once the proposal for a special issue is accepted by the Editorial Board Finally it is also possible that a journal issue be devoted to a single text Practising Human Geography Paul Cloke, Ian Cook, Philip Crang, Mark Goodwin, Joe Painter, Chris Philo, 2004-04-21 Filling an enormous gap in the geographic literature here is a terrific book that shows us how to think about and practice human geographic research Professor Jennifer Wolch University of Southern California Practising Human Geography lucidly comprehensively and sometimes passionately shows why methodology matters and why it is often so hard To choose a method is to choose the kind of geographical values one wants to uphold You need to get it right These authors do Trevor Barnes University of British Columbia Practising Human Geography is a godsend for students Written in an accessible and engaging style the book demystifies the study of geographical methodology offering a wealth of practical advice from the authors own research experience This is not a manual of approved geographical techniques It is a reflexive critical and highly personal account combining historical depth with up to the minute examples of research in practice Practising Human Geography is a comprehensive and theoretically informed introduction to the practices of fieldwork data collection interpretation and writing enabling students to make sense of their own data and to develop a critical perspective on the existing literature The book makes complicated ideas approachable through the effective use of case studies and a firm grasp of contemporary debates Peter Jackson Professor of Human Geography University of Sheffield Practising Human Geography is a critical introduction to key issues in the practice of human geography informed by the question how do geographers do research In examining those methods and practices that are essential to doing geography the text presents a theoretically informed discussion of the construction and interpretation of geographical data including the use of core research methodologies using official and non official sources and the interpretative role of the researcher Framed by an overview of how ideas of practising human geography have

changed the twelve chapters offer a comprehensive and integrated overview of research methodologies The text is illustrated throughout with text boxes case studies and definitions of key terms Practising Human Geography will introduce geographers from undergraduate to faculty to the core issues that inform research design and practice *Spatially Integrated Social Science* Michael F. Edition is fully updated to keep pace with the most recent developments of spatial analysis in a geographic information systems GIS environment Still focusing on the universal aspects of this science this revised edition includes new coverage on geovisualization and mapping as well as recent developments using local statistics Building on the fundamentals this book explores such key concepts as spatial processes point patterns and autocorrelation in area data as well as in continuous fields Also addressed are methods for combining maps and performing computationally intensive analysis New chapters tackle mapping geovisualization and local statistics including the Moran Scatterplot and Geographically Weighted Regression GWR An appendix provides a primer on linear algebra using matrices Complete with chapter objectives summaries thought exercises explanatory diagrams and a chapter by chapter bibliography Geographic Information Analysis is a practical book for students as well as a valuable resource for researchers and professionals in the industry

Multidimensional Geographic Information Science Jonathan Raper, 2000-11-23 The way people normally view a GIS is 2 dimensional a greatly limiting form However as developments occur within the field researchers and practitioners are finding ways to make a GIS 3 dimensional and in some instances even 4 dimensional Being able to view a GIS in more than 2 dimensions greatly enhances its usability This forward looking text looks at the ways in which 3 and 4 dimensional multidimensional GIS can be incorporated into the area in the future using a variety of programming techniques The author of this unique book also discusses current examples and uses of multidimensional GIS in the field and shows the way forward for users in the coming years
