Geography And Education:

Geography Education for Global Understanding Ali Demirci, Rafael de Miguel González, Sarah Witham Bednarz, 2018-04-26 This book presents the core concepts of geographical education as a means of understanding global issues from a spatial perspective. It treats education supported by high standards, approaches, methodologies, and resources as essential in exploring the interactions of the world's human and environmental systems at local, regional, and global scales embedded in the nature of the discipline of geography. It covers topics such as climate change, sustainable development goals, geopolitics in an uncertain world, global crisis, and population flows, which are of great interest to geography researchers and social sciences educators who want to explore the complexity of contemporary societies. Highly respected scholars in geography education answer questions on key topics and explain how global understanding is considered in K-12 education in significant countries around the globe. The book discusses factors such as the Internet, social media, virtual globes, and other technological developments that provide insights into and visualization in real time of the intensity of relationships between different countries and regions of the earth. It also examines how this does not always lead to empathy with other political, cultural, social, and religious values. Terrorism threats and armed conflicts are also essential features of the global world. This book opens the dialogue for global understanding as a great opportunity for teachers, educators, scholars, and policy makers to better equip students and future citizens to deal with global issues. **Geography, Education and the Future** Graham Butt, 2011-03-17 *Handbook of Geography Education* Sarah W. Bednarz, Jerry T. Mitchell, 2025-07-18 This handbook presents a broad and comprehensive overview of research and practices in geography education at primary and secondary levels from birth to about age 18. It summarizes the current state of knowledge in this sub-discipline of geography. Including authors representative of many geography education traditions, the book pays equal attention to learning and teaching and to respect student voices and includes rich in case studies, evidence-based research, and specific examples. It also emphasizes ways that geography education can contribute to global concerns about social justice, diversity, equity, and inclusion, as well as ways it can help to prepare the next generation of informed, critical, and reflective members of societies. The book is divided into five sections: Purposes of geography education, Why is it taught, Perspectives on geography education, What is taught, Practices of geography education, How is it organized and taught, Preparation of geography educators, How are geography educators prepared, Possibilities for geography education, What is the future of geography education. By providing broad perspectives and lively and accessible writing, this handbook is a useful tool for novice geography educators, teacher educators, educational policy makers, support staff such as librarians and media resource specialists, curriculum developers, and assessment experts in many world regions. *Geography Education's Potential and the Capability Approach* Richard Bustin, 2019-08-10 This book explores the pivotal role that geography as a school subject plays in helping every young person achieve their educational potential. Expressed as GeoCapabilities, this concept draws on the capabilities

approach developed by Amartya Sen and Martha Nussbaum applied to curriculum thinking in schools While traditional subjects have often been deemed irrelevant and outdated in an overcrowded secondary school curriculum subjects like geography have often been lost or combined with others to fulfil a broad skills agenda More recent talk of a knowledge led curriculum can often lead to the recitation of facts at the expense of developing deeper understanding This book argues the concept of powerful geographical knowledge based on the work of Michael Young and David Lambert invests the subject of geography with its educational potential this forms the basis of GeoCapabilities GeoCapabilities focuses on both what is being taught and why and as such provides a framework of curriculum thinking which will be of interest and value to geography teachers school leaders with curriculum development responsibilities and all those interested in the capability approach and the moral imperative of education
