**Geologic Modeling and Mapping** Andrea Förster, Daniel F. Merriam, 2013-11-11 This volume is a compendium of papers on the subject as noted in the book title of modeling and mapping They were presented at the 25th Anniversary meeting of the International Association for Mathematical Geology IAMG at Praha Prague Czech Republic in October of 1993 The Association founded at the International Geological Congress IGC in Prague in 1968 returned to its origins for its Silver Anniversary celebration All in all 146 papers by 276 authors were offered for the 165 attendees at the 3 day meeting convened in the Hotel Krystal It was a time for remembrance and for future prognostication The selected papers in Geologic Modeling and Mapping comprise a broad range of powerful techniques used nowadays in the earth sciences Modeling stands for reconstruction of geological features such as subsurface structure in space and time as well as for simulation of geological processes both providing scenarios of geologic events and how these events might have occurred Mapping stands for spatial analysis of data a topic that always has been an extremely important part of the earth sciences Because both modeling and mapping are used widely in conjunction the book title should reflect the close relation of the subjects rather than a division Here we bring together a collection of papers that hopefully contribute to the growing amount of knowledge on these techniques

**Applied Multidimensional Geological Modeling** Alan Keith Turner, Holger Kessler, Michiel J. van der Meulen, 2021-06-22 Over the past decades geological survey organizations have digitized their data handling and holdings unlocking vast amounts of data and information for computer processing They have undertaken 3 D modeling alongside and in some cases instead of conventional geological mapping and begun delivering both data and interpretations to increasingly diverse stakeholder communities Applied Multidimensional Geological Modeling provides a citable central source that documents the current capabilities and contributions of leading geological survey organization and other practitioners in industry and academia that are producing multidimensional geological models This book focuses on applications related to human interactions with conditions in the shallow subsurface within 100 200 m of the surface The 26 chapters developed by 100 contributors associated with 37 organizations discuss topics relevant to any geologist scientist engineer urban planner or decision maker whose practice includes assessment or planning of underground space

Advances on Testing and Experimentation in Civil Engineering Carlos Chastre, José Neves, Diogo Ribeiro, Maria Graça Neves, Paulina Faria, 2022-08-17 The book presents the recent advances on testing and experimentation in civil engineering especially in the branches of geotechnics transportation hydraulics and natural resources It includes advances in physical modelling monitoring techniques data acquisition and analysis and provides an invaluable contribution for the installation of

new civil engineering experimental facilities The first part of the book covers the latest advances in testing and experimentation in key domains of geotechnics soil mechanics and geotechnical engineering rock mechanics and rock engineering and engineering geology Some of the topics covered include new developments in topographic survey acquisition for applied mapping and in situ geotechnical investigations laboratory and in situ tests to estimate the relevant parameters needed to model the behaviour of rock masses and land structures monitoring and inspection techniques designed for offshore wind foundations The second part of the book highlights the relevance of testing and monitoring in transportation Full scale accelerated pavement testing and instrumentation becomes even more important nowadays when for sustainability purposes non traditional materials are used in road and airfield pavements Innovation in testing and monitoring pavements and railway tracks is also developed in this part of the book Intelligent traffic systems are the new traffic management paradigm and an overview of new solutions is addressed here Finally in the third part of the book trends in the field and laboratory measurements and corresponding data analysis are presented according to the different hydraulic domains addressed in this publication namely maritime hydraulics surface water and river hydraulics and urban water

*3D Digital Geological Models* Andrea Bistacchi, Matteo Massironi, Sophie Viseur, 2022-04-05 3D DIGITAL GEOLOGICAL MODELS Discover the practical aspects of modeling techniques and their applicability on both terrestrial and extraterrestrial structures A wide overlap exists in the methodologies used by geoscientists working on the Earth and those focused on other planetary bodies in the Solar System Over the course of a series of sessions at the General Assemblies of the European Geosciences Union in Vienna the intersection found in 3D characterization and modeling of geological and geomorphological structures for all terrestrial bodies in our solar system revealed that there are similar datasets and common techniques for the study of all planets Earth and beyond from a geological point of view By looking at Digital Outcrop Models DOMs Digital Elevation Models DEMs or Shape Models SM researchers may achieve digital representations of outcrops topographic surfaces or entire small bodies of the Solar System like asteroids or comet nuclei 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces has two central objectives to highlight the similarities that geological disciplines have in common when applied to entities in the Solar System and to encourage interdisciplinary communication and collaboration between different scientific communities The book particularly focuses on analytical techniques on DOMs DEMs and SMs that allow for quantitative characterization of outcrops and geomorphological features It also highlights innovative 3D interpretation and modeling strategies that allow scientists to gain new and more advanced quantitative results on terrestrial and extraterrestrial structures 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces readers will also find The first volume dedicated to this subject matter that successfully integrates methodology and applications A series of methodological chapters that provide instruction on best practices involving DOMs DEMs and SMs A wide range of case studies including small to large scale projects on Earth Mars the 67P Churyumov Gerasimenko comet and

the Moon Examples of how data collected at surface can help reconstruct 3D subsurface models 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces is a useful reference for academic researchers in earth science structural geology geophysics petroleum geology remote sensing geostatistics and planetary scientists and graduate students studying in these fields It will also be of interest for professionals from industry particularly those in the mining and hydrocarbon fields Elevation Models for Geoscience Cory Fleming, 2010 Elevation data are a critical element in most geoscience

applications From geological mapping to modelling Earth systems and processes geologists need to understand the shape of the Earth's surface Vast amounts of digital elevation data exist from large scale global to smaller scale regional datasets and many datasets have been merged to improve scale and accuracy For each application decisions are made on which elevation data to use driven by cost resolution and accuracy This publication shows the current status of available digital elevation data and illustrates the key applications The types of data assessed include ASTER stereo satellite imagery Shuttle Radar Topographic Mapping data airborne laser and radar such as NEXTMap and Multibeam Bathymetry Applications covered include glacial deposits landslides coastal erosion and other geological hazards Technical issues discussed include accuracy analysis derived product creation software comparisons and copyright considerations This volume is a comprehensive look at elevation models for geoscience **The Current Role of Geological Mapping in Geosciences** Stanislaw R.

Ostaficzuk, 2006-01-14 The book contains private views of experts from various countries on the role of geological mapping in sustainable development New technologies and concepts are presented which are either awaiting for recognition by Geological Surveys or are gradually applied in some survey The target of the book is well worded in the Summary and recommendations elaborated by the Ad Hoc Committee at the Advanced Research Workshop on Innovative Geological Cartography held under NATO sponsorship in Poland in November 2003 After the Summaries were issued by the end of 2003 the authors who presented their views at the Workshop gave a revised version of their papers with more new ideas and material Generally the book is addressed to cartographers in Geological Surveys geologists and geographers co operating with landuse planners ecologists and decision makers who may learn about the state of the art and the enormous information potential of the modern information technologies in Geosciences The book however gives no methodological recipes but as it was the authors intention may and shall be used as a guide book in modernizing Information Technologies at the local regional and national levels in Geosciences *Digital Mapping Techniques '99* David R. Soller, 1999 **Carbon Dioxide**

**Sequestration in Geological Media** Matthias Grobe, Jack C. Pashin, Rebecca L. Dodge, 2010-03-01 Over the past 20 years the concept of storing or permanently storing carbon dioxide in geological media has gained increasing attention as part of the important technology option of carbon capture and storage within a portfolio of options aimed at reducing anthropogenic emissions of greenhouse gases to the earth's atmosphere This book is structured into eight parts and among other topics provides an overview of the current status and challenges of the science regional assessment studies of carbon dioxide

geological sequestration potential and a discussion of the economics and regulatory aspects of carbon dioxide sequestration

**Oil Field Production Geology** Mike Shepherd, 2009-09-20 This book was written for students new professionals in oil companies and for anyone with an interest in reservoir geology It explains the background to production geology in the context of oil field subsurface operations It also gives practical guidelines as to how a production geologist can analyze the reservoir geology and fluid flow characteristics of an oil field with the aim of improving hydrocarbon recovery Advice is given on how to search for the remaining oil volumes in a producing field where these pockets are typically found and then how to plan wells to target these volumes Publisher's description

Geoinformatics A. Krishna Sinha, 2006-01-01 The science of informatics in the broadest sense has been several thousands of years in the making With the recent emergence of large storage devices and high speed processing of data it has become possible to organize vast amounts of data as digital products with ontologic tags and concepts for smart queries Coupling this computational capability with earth science data defines the emerging field of geoinformatics Since the science of geology was established several centuries ago observations led to conclusions that were integrative in concept and clearly had profound implications for the birth of geology As disciplinary information about Earth becomes more voluminous the use of geoinformatics will lead to integrative science based discoveries of new knowledge about planetary systems Twenty one research papers co authored by 96 researchers from both earth and computer sciences provide the first ever organized presentation of the science of informatics as it relates to geology Readers will readily recognize the vast intellectual content represented by these papers as they seek to address the core research goals of geoinformatics Publisher's website
