Geometric Analysis Of Pde And Several Complex Variables Dedicated To Franois Treves:

Geometric Analysis of PDE and Several Complex Variables Francois Treves, 2005 This volume is dedicated to Francois Treves who made substantial contributions to the geometric side of the theory of partial differential equations PDEs and several complex variables One of his best known contributions reflected in many of the articles here is the study of hypo analytic structures An international group of well known mathematicians contributed to the volume Articles generally reflect the interaction of geometry and analysis that is typical of Treves s work such as the study of the special types of partial differential equations that arise in conjunction with CR manifolds symplectic geometry or special families of vector fields There are many topics in analysis and PDEs covered here unified by their connections to geometry The material is suitable for graduate students and research mathematicians interested in geometric analysis of PDEs and several complex variables

Multidimensional Complex Analysis and Partial Differential Equations Francois Treves, Paulo D. Cordaro, Howard Jacobowitz, 1997 This collection of papers by outstanding contributors in analysis partial differential equations and several complex variables is dedicated to Professor Treves in honour of his 65th birthday There are five excellent survey articles covering analytic singularities holomorphically nondegenerate algebraic hypersurfaces analyticity of CR mappings removable singularities of vector fields and local solvability for systems of vector fields The other papers are original research contributions on topics such as Klein Gordon and Dirac equations Toeplitz operators elliptic structures complexification of Lie groups and pseudo differential operators

Complex Geometric Analysis in Pohang Kang-Tae Kim, Steven George Krantz, 1999 This volume comprises the proceedings of a conference on the geometric analysis of several complex variables held at POSTECH in June 1997 The conference was attended by scientists and students from around the globe Each of the five plenary speakers at the conference gave a short course on a topic of current interest in the field The lecture write ups contain cogent and accessible information intended for a broad audience The volume also includes a tutorial in several complex variables given by Kim and Krantz at the conference This tutorial is geared toward helping the novice to understand the rest of the material in the book The bibliographies of the papers give students and young mathematicians a valuable resource for future learning on the topic This book provides a substantial overview on areas of current activity Required background for understanding the text is a solid undergraduate education in mathematics and familiarity with first year graduate studies in real and complex analysis Some exposure to geometry would be helpful The book is also suitable for use as a supplemental course text

The Abel Prize 2013-2017 Helge Holden, Ragni Piene, 2019-02-23 The book presents the winners of the Abel Prize in mathematics for the period 2013 17 Pierre Deligne 2013 Yakov G Sinai 2014 John Nash Jr and Louis Nirenberg 2015 Sir Andrew Wiles 2016 and Yves Meyer 2017 The profiles feature autobiographical information as well as a scholarly description of each mathematician s work In addition each profile contains a Curriculum Vitae a complete bibliography and the full citation from the prize committee The book also includes photos for the period 2003 2017 showing

many of the additional activities connected with the Abel Prize As an added feature video interviews with the Laureates as well as videos from the prize ceremony are provided at an accompanying website <http://extras.springer.com> This book follows on The Abel Prize 2003-2007 The First Five Years Springer 2010 and The Abel Prize 2008-2012 Springer 2014 which profile the work of the previous Abel Prize winners *Mathematical Reviews*, 2005 *American Book Publishing Record*, 2005
