The Geometry of Multiple Images Olivier Faugeras, Quang-Tuan Luong, Théo Papadopoulo, 2001 This book formalizes and analyzes the relations between multiple views of a scene from the perspective of various types of geometries A key feature is that it considers Euclidean and affine geometries as special cases of projective geometry. Over the last forty years researchers have made great strides in elucidating the laws of image formation processing and understanding by animals humans and machines This book describes the state of knowledge in one subarea of vision the geometric laws that relate different views of a scene Geometry one of the oldest branches of mathematics is the natural language for describing three dimensional shapes and spatial relations Projective geometry the geometry that best models image formation provides a unified framework for thinking about many geometric problems are relevant to vision The book formalizes and analyzes the relations between multiple views of a scene from the perspective of various types of geometries A key feature is that it considers Euclidean and affine geometries as special cases of projective geometry Images play a prominent role in computer communications Producers and users of images in particular three dimensional images require a framework for stating and solving problems The book offers a number of conceptual tools and theoretical results useful for the design of machine vision algorithms It also illustrates these tools and results with many examples of real applications Multiple Affordances of Language Corpora for Data-driven Learning Agnieszka Leńko-Szymańska, Alex Boulton, 2015-05-15 In recent years corpora have found their way into language instruction albeit often indirectly through their role in syllabus and course design and in the production of teaching materials and other resources An alternative and more innovative use is for teachers and students alike to explore corpus data directly as part of the learning process This volume addresses this latter application of corpora by providing research insights firmly based in the classroom context and reporting on several state of the art projects around the world where learners have direct access to corpus resources and tools and utilize them to improve their control of the language systems and skills or their professional expertise as translators Its aim is to present recent advances in data driven learning addressing issues involving different types of corpora for different learner profiles in different ways for different purposes and using a variety of different research methodologies and perspectives **Bulletin of the Atomic Scientists** ,1973-10 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world The Law Times ,1846 Plutarch's Lives, Translated ... with Notes ... and a Life of Plutarch.
