appearance can be counted on The group classed as perennials occupies this position and about flowers of this class is arranged all the various array of annuals and bulbs These last act as reinforcements in rounding out the garden scheme Perennials are plants that live on year after year if the conditions surrounding them are congenial Trees and shrubs are perennials of course in these the stems are woody but we are considering only those known as herbaceous perennials having stems of a more or less soft texture that with the exception of a few evergreen species die back each fall new ones appearing the following spring Quite a number of them are too tender to be generally grown as hardy perennials but those that bloom freely the first year like the snapdragon are treated as annuals discarding them when the season is ended Some biennials those that do not bloom until the second year and then die may be placed among the perennials and considered of their class because they seed so freely at the base of the parent plant and bloom the following year that their presence in the border is nearly always assured The only thing necessary to do is to transplant those not in the situation you desire them to bloom in Rudbeckia triloba one of the Black eyed Susan type is not only a good example of this class but a charming plant that all should grow and moreover it is a very accommodating one doing splendidly in semi shady places such as north of buildings or under weeping trees like the rose flowered Japanese weeping cherry It is at home in full sunshine where it will form a broadly rounded bushy plant about three feet in diameter and when in full bloom with its myriad of black eyed flowers it can dispel the worst case of melancholia a dyspeptic ever enjoyed It requires a good open rather light soil to do itself justice If lifted when in full bloom put into a ten inch pot well soaked at the roots and set aside for a few hours away from sun and wind it will last for two weeks as a porch or house plant We hear a good deal about the gardens of our grandmothers perennial gardens in which the plants outlived the flagstones at the house door With a few exceptions perennials are not long lived The gas plant peonies some of the iris day lilies and a few others seem permanent The usual run require to be taken up about every two or three years and divided There are two reasons for this In the first place the roots have exhausted all the food within reach and again the main crown from which spring the blooming shoots dies from exhaustion At the outer edge of this decay is generally a fringe of live matter which if taken up separate from the decayed center divided and reset in good soil will rejuvenate itself and soon form a new plant In unfavorable sections the Texas gaillardia will lose its crown during winter and the anxious novice watches impatiently in the spring for its reappearance and finally digs it up only to find that while the crown is decayed the roots are alive and here and there on these new plant buds are forming which if not disturbed would soon make good plants probably not placed however just where wanted
