Gas Turbine Regenerators:

Gas-Turbine Regenerators Douglas Beck, David G. Wilson, 2012-12-06 Regenerative gas turbines are attractive alternatives to diesel engines and spark ignition engines for automobiles and to diesel engines and combined cycle engines for power generation Theory indicates regenerative gas turbines should achieve higher thermal efficiencies than those of diesel engines and combined cycle engines Further regenerative gas turbines are potentially lower in cost require less maintenance require less space and pollute less than competitive systems Regenerators can be used for exhaust gas heat exchange or for intercooling in gas turbine systems As an exhaust gas heat exchanger a regenerator recovers heat from the exhaust and uses it to preheat the compressed air before the compressed air enters the combustor Preheating of the compressed air permits a small heat input to the combustor for a given power output of the engine As an intercooler a regenerator cools the gas between compressor stages Less work is required to compress cool gas than is required to compress warm gas Therefore a regenerator intercooler can reduce the required work input to the compressor Thus regenerators can be used to increase the thermal efficiencies and power outputs of gas turbines the backbones of high performance re High performance regenerators are generative gas turbines In the past lack of understanding of regenerator performance has led to sub optimal engine designs Now this book gives comprehensive regenerator information With this book the designer can design regenerators that will yield gas turbines with maximum thermal efficiencies Development of a Gas Turbine with Regenerator and Utilization of Coal and Fuel for Gas Turbines W. Robinson, 1946 **Gas Turbine Regenerator Design Studies** Stanford University. Department of Mechanical Engineering, 1949 Heat Exchanger Design Handbook Kuppan Thulukkanam, 2000-02-23 This comprehensive reference covers all the important aspects of heat exchangers HEs their design and modes of operation and practical large scale applications in process power petroleum transport air conditioning refrigeration cryogenics heat recovery energy and other industries Reflecting the author's extensive practical experience **Optimum Design of Gas Turbine Regenerators** John Francis Brady, 1950 *Ceramic Regenerator Systems Development Program* United States.
