**Dynamic Structure of Detonation in Gaseous and Dispersed Media** A.A. Borissov, 2012-12-06 Of late the demands of industry in creating new composite and functional materials with present properties stimulated an increased interest to the investigation of processes which occur in the detonation technologies of complex chemical composition with an additive of disperse particles The collection includes a series of papers presented at the 3d International Conference Lavrentyev Readings on Mathematics Mechanics and Physics Novosibirsk 1990 was held by the Hydrodynamics Institute under the support of the Presidium of the Siberian Branch of the USSR Academy of Sciences to stimulate the international cooperation of the leading international centers In the framework of this Conference the Round Table seminar was held by Prof A Borissov and Prof V Mi trofanov devoted to Dynamic Structure of Detonation in Gaseous and Dispersed Media The idea to hold such Round Table was supported by Chairman of Organizing Committee academician Prof V Titov from Hydrodynamics Institute and academician Prof V Nakoryakov and also his Institute of Thermophysics The main ideas discussed at the Round Table were presented in the form of papers which reflected present situation of the problem of dynamic structure of the detonation waves in gaseous and dispersed media The basic experimental facts concerning of complicated mul ti dimensional non stationary structure both of the detonation wave and its front surface generation of the cell structure the effect of transverse waves obstacles channel geometry etc on the transition from dynamic regime to stationary structure are represented in the fist three papers

**Dynamics of Detonations and Explosions** A. L. Kuhl, 1991 **Thermo-Gas Dynamics of Hydrogen Combustion and Explosion** Boris E. Gelfand, Mikhail V. Silnikov, Sergey P. Medvedev, Sergey V. Khomik, 2012-02-13 The potential of hydrogen as an important future energy source has generated fresh interest in the study of hydrogenous gas mixtures Indeed both its high caloricity and reactivity are unique properties the latter underscoring safety considerations when handling such mixtures The present monograph is devoted to the various aspects of hydrogen combustion and explosion processes In addition to theoretical and phenomenological considerations this work also collates the results of many experiments from less well known sources The text reviews the literature in this respect thereby providing valuable information about the thermo gas dynamical parameters of combustion processes for selected experimental settings in a range of scientific and industrial applications

*Progress In Astronautics and Aeronautics* A. A. Borisov, 1991 *Combustion Theory* Forman A. Williams, 2018-03-05 Combustion Theory delves deeper into the science of combustion than most other texts and gives insight into combustions from a molecular and a continuum point of view The book presents derivations of the basic equations of combustion theory and contains appendices on the background of subjects of thermodynamics chemical kinetics fluid dynamics and transport processes Diffusion flames reactions in flows with negligible transport and the theory of pre mixed flames are treated as are detonation phenomena the combustion of solid propellents and ignition extinction and flamibility pehnomena
