Gastric Cytoprotection:

Gastric Cytoprotection Daniel Hollander, Andrzej S. Tarnawski, 2012-12-06 Gastric secretions contain hydrogen ions at a concentration that is more than one million times higher than their intracellular concentration. This phenomenal gradient as well as the demonstrated ability of gastric juice to digest tissues has motivated clinicians and investigators alike to emphasize acid secretion and acid ablation in studying the pathogenesis and therapy of peptic ulcer disease. Consequently over the past 150 years we have made considerable progress in understanding the mechanisms and regulation of acid secretion by the stomach. Not surprisingly therapy for both peptic disease and mucosal injury has also been predominantly directed at either neutralizing acid or suppressing its production. During the past 10 years attention has been focused on factors other than acid in the genesis and therapy of ulcer disease. Work done worldwide demonstrated that acid hypersecretion is not a common event in peptic ulcer disease. Therefore we began realizing that factors other than acid secretion may be important in the genesis of ulcer disease or in gastroduodenal mucosal damage. In addition new physiological information has established that the gastroduodenal mucosa is normally protected by a complex series of events including mucus and bicarbonate secretion, cell renewal, surface mucosal restitution and preservation of the microvasculature and mucosal proliferative zone. Cell/Tissue Injury and Cytoprotection/Organoprotection in the

Gastrointestinal Tract L.P. Filaretova, K. Takeuchi, 2012-06-22 In recent years there have been significant advances both in understanding the mechanisms involved in gastrointestinal mucosal injury and protection as well as in the development of successful strategies for prevention and treatment of gastrointestinal injury. Nevertheless many people worldwide still suffer from gastrointestinal damage. This book contains contributions by an international panel of researchers in the form of up to date reviews on the mechanisms of gastrointestinal injury and protection. These are complemented by papers discussing how these new findings about cell tissue injury and cytoprotection/organoprotection can be applied to the prevention and treatment of tissue damage in the gastrointestinal tract. Moreover the publication includes a special chapter on Andre Robert who has discovered the phenomenon of gastric cytoprotection. This publication will be of great interest for both basic and clinical researchers in gastroenterology and pharmacology reviewing the advances made so far and pointing towards future developments.

Proton Transport Tetsuro Urushidani, John G. Forte, George Sachs, 2012-12-06 This volume represents the proceedings of the 9th International Proton Transport Conference: Mechanisms and Consequences of Proton Transport held in Leura,

Australia, August 19-21, 2001. This conference has been held since 1971 every 3 to 4 years with few exceptions in association with the Congress of the International Union of Physiological Sciences. The first meeting was held in Frankfurt, Germany at the Max Planck Institute. Countries hosting the conference have been Germany twice, Sweden twice, India, Canada, USA, Great

Britain and now Australia Over the past 30 years participants at these Proton Transport Conferences have been principal contributors to the major discoveries in the physiology biochemistry and pharmacology of gastric acid secretion These include development of the H₂ receptor blockers defining the signaling pathways for the regulation of acid secretion identifying the gastric proton pump discovery and development of proton pump inhibitory drugs and elucidating the physiology and biochemistry of *Helicobacter pylori* *International Union of Pharmacology* Paul Turner,2016-01-09

Transgenic Models in Pharmacology Lutz Hein,2012-12-06 Up to date information on animal models generated by transgenic or gene targeting techniques Naturally the focus is on the mouse system Each chapter has been written by leading experts in the field and gives an overview on existing animal models This is facilitated by tables which list the most important genetically engineered animal models and their phenotypes This book aims at illustrating the impact of transgenic animal models in the field of Experimental Pharmacology and Toxicology which includes their role in the understanding of basic cellular mechanisms the evaluation of potential drug targets or the testing for drug effects **Ulcer Disease** Sandor Szabo,Carl J. Pfeiffer,2024-12-20

The latest data on the pathogenesis of ulcer disease is presented in this text with the emphasis that an understanding of the pathogenesis and etiology of ulcer diseases represents the most rational approach to pharmacology the prevention and treatment of ulcer disease Early and late biochemical and functional changes morphologic stages of the injury and healing phases as well as vascular factors in ulceration are highlighted In addition new pathogenetic elements on neuroendocrine and other endogenous modulators and circadian rhythms in ulcerogenesis are covered The section on new pharmacology consists of several chapters presenting new animal models of gastric small intestinal and colonic ulcers because in vivo models represent the basis to test and accurately detect new antiulcer drugs A large series of chapters cover new drugs for ulcer prevention and treatment This book is indispensable to investigators in basic and applied research academic and industrial pharmacologists and clinicians in gastroenterology **Practical Applications of**

Prostaglandins and their Synthesis Inhibitors Sultan M.M. Karim,2012-12-06 This is the fourth in a series of books on Advances in Prostaglandin Research published by MTP Press From laboratory and animal studies a large number of practical applications of prostaglandins have been identified In some areas clinical trials have also been carried out There is usually a long time interval between identifying practical applications of new drugs and clinical trials Most of the information on practical applications of prostaglandins is scattered in different journals Although a number of books dealing with prostaglandin research have been published including some on practical applications in specific areas e g reproduction there is no single volume dealing with all areas of practical applications of these substances This book aims at filling this gap and should be of interest to clinicians as well as to medical and basic scientists in academic institutions and in the pharmaceutical industry In some areas exciting potential applications of prostaglandins have been identified from basic research but clinical trials have so far not been carried out Such areas of practical applications are covered in a separate introductory chapter All

contributors to the volume are scientists and clinicians actively engaged in prostaglandin research and most are recognized authorities in specific areas The need for rapid publication in a fast expanding field is obvious

Gastritis Bruna Maria Roesler, 2019-12-18 The isolation and identification of *Helicobacter pylori* as the cause of gastrointestinal diseases had major implications for public health and led to curative treatments that reduced suffering from many acute and chronic conditions Although alternative therapies have been used to improve eradication current treatments still rely on a combination of antimicrobial agents often associated with antisecretory agents such as proton pump inhibitors In this book there is a comprehensive overview by contributors on *H pylori* infection in diverse areas including a general overview of *H pylori* infection and discussions about the principal therapeutic regimens of bacterium eradication considering antimicrobial resistance Also certain aspects of autoimmune gastritis an important condition that has been related to microorganism infection is also considered *H pylori* is clearly a very interesting bacterium and great studies and discussions about all its aspects are welcomed by the medical and scientific communities

Biochemical Pharmacology as an Approach to Gastrointestinal Disorders Timothy S. Gaginella, K. D. Rainsford, Gyula Mózsik, 2012-12-06 The Gastrointestinal Section of the International Union of Pharmacology IUPHAR was established in 1994 in Montreal Canada The establishment of the GI Section recognizes the international progress of gastrointestinal pharmacology including basic and human studies The Gastrointestinal Section of IUPHAR organized the first symposium Biochemical Pharmacology as an Approach to Gastrointestinal Diseases from Basic Science to Clinical Perspectives on 10-12 October 1995 in Pécs Hungary The main topics were Gastrointestinal secretory and excretory functions Gastrointestinal motility Biochemical pharmacological mechanisms in neural and hormonal actions involved in GI functions Main normal and pathological biochemical mechanisms in GI functions GI mucosal injury and protection Molecular mechanisms of premalignant and malignant diseases in GI tract Use of isolated cells and cell cultures in biochemical pharmacological studies to approach GI diseases The presented papers are published in this book

Prostanoids P. K. Moore, 1985-12-12 Prostanoids are a group of fat soluble compounds synthesised by almost every cell in the human body and they are essential to the proper functioning of the organs Interruption to the constant rate of formation and release of prostanoids may cause life threatening conditions to develop for example a deficiency may exacerbate or cause strokes heart disease diabetes and an excess is implicated in arthritis The interest in the structure and functions of prostanoids is great and much research effort has been spent on elucidating facts about them This book makes explicit the present knowledge on the subject and emphasises the pharmacology physiology and relevance to clinical conditions It offers those studying pharmacology and physiology particularly in preclinical medical courses an up to date summary of this exciting group of substances
