The BRST formulation of G/H WZNW models.

Stephen Hwang¹ and Henric Rhedin²

Chalmers University of Technology

Abstract

We consider a BRST approach to G/H coset WZNW models, *i.e.* a formulation in which the coset is defined by a BRST condition. We will give the precise ingredients needed for this formulation. Then we will prove the equivalence of this approach to the conventional coset formulation by solving the the BRST cohomology. This will reveal a remarkable connection between integrable representations and a class of non-integrable representations for negative levels. The latter representations are also connected to string theories based on non-compact WZNW models. The partition functions of G/H cosets are also considered. The BRST approach enables a covariant construction of these, which does not rely on the decomposition of G as $G/H \times H$. We show that for the well-studied examples of $SU(2)_k \times SU(2)_{-1}/SU(2)_{k+1}$ and $SU(2)_k/U(1)$, we exactly reproduce the previously known results.

Gauged WZNW Models and Coset Constructions in Relation to String Theories Henric Rhedin,1995 Quantum Non-linear Sigma-Models Sergei V. Ketov,2013-03-09 This is the first comprehensive presentation of the quantum non linear sigma models The original papers consider in detail geometrical properties and renormalization of a generic non linear sigma model illustrated by explicit multi loop calculations in perturbation theory *GROUP 24* J.P Gazeau,R Kerner,J.P Antoine,S Metens,J.Y Thibon,2003-11-30 As a record of an international meeting devoted to the physical and mathematical aspects of group theory *GROUP 24 Physical and Mathematical Aspects of Symmetries* provides an important selection of informative articles describing recent advances in the field The applications of group theory presented in this book deal not only with the traditional fields of physics but also include such disciplines as chemistry and biology Plenary session contributions are represented by 18 longer articles followed by nearly 200 shorter articles The book also presents coherent states wavelets and applications and quantum group theory and integrable systems in two separate sections *New Symmetry Principles in Quantum Field Theory* J. Frölich, Gerard 't Hooft,Arthur Jaffe, Gerhard Mack,Pronob K. Mitter,Raymond Stora,2012-12-06 Soon after the discovery of quantum mechanics group theoretical methods were used extensively in order to exploit rotational symmetry and classify atomic spectra And until recently it was thought that symmetries in quantum mechanics should be groups But it is not so There are more general algebras equipped with suitable structure which admit a perfectly conventional interpretation as a symmetry of a quantum mechanical system In any case a trivial representation of the algebra is defined and a tensor product of representations But in contrast with groups this tensor product needs to be neither commutative nor associative Quantum groups are special cases in which associativity is preserved The exploitation of such Quantum Symmetries was a central theme at the Advanced Study Institute Introductory lectures were presented to familiarize the participants with the algebras which can appear as symmetries and with their properties Some models of local field theories were discussed in detail which have some such symmetries in particular conformal field theories and their perturbations Lattice models provide many examples of quantum theories with quantum symmetries They were also covered at the school Finally the symmetries which are the cause of the solubility of integrable models are also quantum symmetries of this kind Some such models and their nonlocal conserved currents were discussed *Geometrical Aspects Of Quantum Fields - Proceedings Of The 2000 Londrina Workshop* Andrei A Bytsenko,Antonio E Goncalves,Bruto M Pimentel,2001-02-05 This volume presents the following topics non Abelian Toda models brief remarks for physicists on equivariant cohomology and the Duistermaat Heckman formula Casimir effect quantum groups and their application to nuclear physics quantum field theory quantum gravity and the theory of extended objects and black hole physics and cosmology High Energy Physics Index ,1993 Mathematical Reviews ,1997 Soviet Journal of Nuclear Physics ,1992 Physics Letters ,1998 Advances in Theoretical and Mathematical Physics ,2007 Energy Research Abstracts
