Wasserman,2022 This book is the first study of recent coming of age novels from Brazil and the Spanish speaking Caribbean I investigate the divide in Afro Latin American research that usually favors either Hispanic America or Brazil but not both I argue that contemporary novelists have adapted the coming of age novel to explore central themes in the Afro Latin American experience such as Blackness African religions and folkloric traditions and immigration While there is no firm consensus on the term Blackness scholars typically use the term to describe the social cultural and historical experience of Afro descendants in the diaspora The Afro Latin American bildungsromans examined in this study include a number of religions such as Catholicism Spiritism and syncretic folk religions as well as Santería and Umbanda reflecting the variety of beliefs in Latin America I have found that young people turn to religions and spiritual traditions in time of need Going on a journey as part of one's personal development is one of the central themes of many bildungsroman and this pertains too in Afro Latin American novels Caribbean characters are depicted as immigrating to the United States whereas few Brazilians have enough resources to travel to North America and instead move to larger cities within their own country

Ingenieria Térmica Martín Llorens Morraja,Angel Luis Miranda Barreras,2009-03 La Termodin mica es la parte de la F sica en sus dos vertientes cl sica y estad stica que estudia la energ a y su transformaci n de una forma en otra El estudio puede hacerse de forma macrosc pica es decir sin tener en cuenta las peculiaridades de las part culas que integran el sistema Termo Cl sica o bien teniendo en cuenta las propiedades

promedio de grandes grupos de partículas Termodinámica En general se considera que su estudio ofrece algunas dificultades inherentes a ciertas peculiaridades en la formulación y desarrollo de sus leyes Si nos limitásemos al estudio de los aspectos puramente aplicados perderíamos fácilmente la perspectiva general que todo técnico o ingeniero ha de poseer porque aunque sea cierto en lo particular se ha de tener un buen criterio general en los temas relacionados con los mismos Un aspecto fundamental de la Termodinámica es el estudio de la transformación de una forma de energía en otra especialmente la de calor en trabajo Por otra parte la transmisión del calor exige la existencia de un gradiente de temperaturas es decir que la temperatura no sea constante La Termodinámica estudia la temperatura y el calor pero no específicamente la distribución de temperaturas ante un proceso determinado de transferencia de calor Dicho con palabras más sencillas la Termodinámica determina la tasa de transferencia de calor y la Termotecnia se ocupa de la distribución de temperaturas La Ingeniería Térmica pretende efectuar un estudio conjunto de ciertos aspectos fundamentales de la Termotecnia y de la Termodinámica Así pues la Termotecnia comprende el estudio de la transmisión de calor y de los dispositivos para llevarla a cabo y la Termodinámica el estudio de las leyes fundamentales relacionadas con la energía
