The Gaseous Metabolism of Infants Francis Gano Benedict, Fritz Bradley Talbot, 1914      *The Gaseous Metabolism of Infants* Francis Gano Benedict, 1914      *The Gaseous Metabolism of Infants* Francis G. Benedict, 2016-09-26 Excerpt from *The Gaseous Metabolism of Infants With Special Reference to Its Relation to Pulserate and Muscular Activity* The earliest record that we have been able to find of the measurement of the gaseous metabolism of an infant is that reported by J Forster of Munich in In an effort to explain the well known fact that children consume a larger amount of food in proportion to their body weight than do adults this investigator made determinations of the carbon dioxide excretion in 14 experiments on children varying in age from 14 days to 9 years His results all showed that 10 or 12 grams of carbon dioxide were given off per hour for every 10 kilograms of body weight With adults on the same basis the carbon dioxide given off under conditions of rest and approximate hunger was 4 to 5 grams per hour with an average diet 5 to 6 grams and with food and work 7 grams The author points out that the youthful organism even in the condition of hunger produces per unit of weight at least twice the amount of carbon dioxide which is produced by the adult body The fact is also recognized that the infant can develop a considerable amount of work as will be seen by the following quotation About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works      **The Gaseous Metabolism of Infants with Special Reference to Its Relation to Pulserate and Muscular Activity** Francis Gano Benedict, 1914      *The Gaseous Metabolism of Infants with Special Reference to Its Relation to Pulserate and Muscular Activity* Francis Gano Benedict, 2012-08-01 Unlike some other reproductions of classic texts 1 We have not used OCR Optical Character Recognition as this leads to bad quality books with introduced typos 2 In books where there are images such as portraits maps sketches etc We have endeavoured to keep the quality of these images so they represent accurately the original artefact Although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy      *The Gaseous Metabolism of Infants* Francis Gano Benedict, Fritz Bradley Talbot, 1914      **The Gaseous Metabolism of Infants** Francis Gano Benedict, Bradley Talbot, 1914      **The Gaseous Metabolism of Infants** Francis Gano Benedict, Fritz Bradley Talbot, 2015-09-03 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations
