seeking guidance on the balance between central bank digital currency CBDC fast payment systems FPS and electronic money e money solutions Common questions arising include Do central banks need a CBDC when already equipped with other well established digital payments systems For central banks with less developed solutions Should central banks establish one system over the other This discussion is then compounded by the reality of constrained resources This note focuses on the comparison of retail CBDC that is the presence of digital central bank money available to the general public with FPS and e money systems from a payments perspective and how CBDC may support a jurisdiction's vision on payments in the digital age The note does not seek to advocate for CBDC over an FPS or e money The balance of arguments for any one system may change over time and the choice may not be mutually exclusive in many jurisdictions In the future it is possible to envisage the coexistence of an FPS e money and CBDC in many payment landscapes across the world Through good design all three systems could meet central bank objectives such as payments efficiency and supporting financial inclusion some benefits are unique to CBDC such as maintaining access to central bank money in an increasingly digitalized age While central banks will make choices unique to their circumstances it remains important for central banks to establish a strategy that allows them at minimum to monitor trends and core benefits of multiple solutions as developments occur to allow them to plan adapt and drive developments in their payments landscape
