Endangered Minds:

Endangered Minds Jane M. Healy, 2011-07-19 Is today's fast paced media culture creating a toxic environment for our children's brains In this landmark bestselling assessment tracing the roots of America's escalating crisis in education Jane M Healy Ph D examines how television video games and other components of popular culture compromise our children's ability to concentrate and to absorb and analyze information Drawing on neuropsychological research and an analysis of current educational practices Healy presents in clear understandable language How growing brains are physically shaped by experience Why television programs even supposedly educational shows like Sesame Street develop habits of mind that place children at a disadvantage in school Why increasing numbers of children are diagnosed with attention deficit disorder How parents and teachers can make a critical difference by making children good learners from the day they are born

Endangered Minds Jane M. Healy, 1990 *Shades of Loneliness* Richard Stivers, 2004 In this incisive and controversial book Richard Stivers rejects genetic explanations of psychological problems arguing instead that the very organization of technological societies is behind the pervasive experience of loneliness In its extreme form loneliness assumes pathological dimensions in neurosis and schizophrenia which reflect the contradiction between power and meaninglessness that characterizes modern life Loneliness in its many manifestations seems to be the price we must pay for living in a technological world Yet nurturing family friend and community ties can mitigate its culturally and psychologically disorganizing power This book is a clarion call for a renewal of moral awareness and custom to combat the fragmentation and depersonalization of our technological civilization Visit our website for sample chapters *Learning with the Brain in Mind* Frank McNeil, 2008-12-18 Excellent a wonderful readable summary of what the educational world really needs to know about neuroscience Sue Palmer Literacy consultant and author of *Toxic Childhood* During the past few decades we've seen an explosion of information about the human brain Sorting through the research and determining which findings have applications in the classroom is a daunting prospect Fortunately Frank McNeil has undertaken this task doing an excellent job Clearly written immediately practical this is one of the best books I've read in the field It belongs on every teacher's and administrator's desk Pat Wolfe Ed D Author of *Brain Matters Translating Research to Classroom Practice* and President of Mind Matters Inc *Learning with the Brain in Mind* offers a fresh approach to teaching exploring recent findings in neuroscience and combining them with learning in three crucial and interconnected ways Attention Emotions and Memory Attention is the foundation for intellectual development as part of an essential survival strategy Emotional relationships are the basis for brain growth and provide the foundations for acquiring cognitive and social skills Memory has important influences on the sense of self and therefore on learning The book provides evidence of the controversial impacts of diet television and mineral supplements on learning both at school and at home examples from three research studies offering insights into pupils' attitudes to life and learning in school practical strategies that will help pupils to learn in more effective

ways Promoting new thinking about learning and considering innovative strategies that arise from our understanding of how the brain works this book will help teachers parents and other educators enhance children s learning Frank McNeil was Director of the National School Improvement Network at the Institute of education and a former Headteacher Principal Inspector for an outer London LEA and an Ofsted Registered inspector [The Sibling Society](#) Robert Bly,1997-05-27 Where have all the grownups gone In answering that question with the same freewheeling erudition and intuitive brilliance that made Iron John a national bestseller poet storyteller and translator Robert Bly tells us that we live in a sibling society in which adults have regressed into adolescence and adolescents refuse to grow up **The Well-Trained Mind** Susan Wise Bauer,Jessie Wise,2009-05-04 If you re a parent who has decided to educate your children yourself this book is the first you should buy Washington Times The Well Trained Mind will instruct you step by step on how to give your child an academically rigorous comprehensive education from preschool through high school one that will train him or her to read to think to understand to be well rounded and curious about learning Veteran home educators Jessie Wise and Susan Wise Bauer outline the classical pattern of education called the trivium which organizes learning around the maturing capacity of the child s mind and comprises three stages the elementary school grammar stage the middle school logic stage and the high school rhetoric stage Using this theory as your model you ll be able to instruct your child in all levels of reading writing history geography mathematics science foreign languages rhetoric logic art and music regardless of your own aptitude in those subjects This newly revised edition contains completely updated ordering information for all curricula and books new and expanded curricula recommendations new material on using computers and distance learning resources answers to common questions about home education information about educational support groups and advice on practical matters such as working with your local school board preparing a high school transcript and applying to colleges **Television and the Mind** Lichtenstein Creative Media, Incorporated,2002-10 **With All Your Mind** Michael L. Peterson,2001-10-29 With All Your Mind makes a compelling case for the value of thinking deeply about education in America from a historically orthodox and broadly ecumenical Christian point of view Few people dispute that education in America is in a state of crisis But not many have posed workable solutions to this serious problem Michael Peterson contends that thinking philosophically about education is our only hope for meaningful progress In this refreshing book he invites all who are concerned about education in America to participate in his study which analyzes representative theories and practical strategies that reveal the power of Christian ideas in this vital area *The Flickering Mind* Todd Oppenheimer,2004-12-07 The Flickering Mind by National Magazine Award winner Todd Oppenheimer is a landmark account of the failure of technology to improve our schools and a call for renewed emphasis on what really works American education faces an unusual moment of crisis For decades our schools have been beaten down by a series of curriculum fads empty crusades for reform and stingy funding Now education and political leaders have offered their biggest and most expensive promise ever the miracle of computers and the Internet at

a cost of approximately 70 billion just during the decade of the 1990s Computer technology has become so prevalent that it is transforming nearly every corner of the academic world from our efforts to close the gap between rich and poor to our hopes for school reform to our basic methods of developing the human imagination Technology is also recasting the relationships that schools strike with the business community changing public beliefs about the demands of tomorrow s working world and reframing the nation s systems for researching testing and evaluating achievement All this change has led to a culture of the flickering mind and a generation teetering between two possible futures In one youngsters have a chance to become confident masters of the tools of their day to better address the problems of tomorrow Alternatively they can become victims of commercial novelties and narrow measures of ability underscored by misplaced faith in standardized testing At this point America s students can t even make a fair choice They are an increasingly distracted lot Their ability to reason to listen to feel empathy is quite literally flickering Computers and their attendant technologies did not cause all these problems but they are quietly accelerating them In this authoritative and impassioned account of the state of education in America Todd Oppenheimer shows why it does not have to be this way Oppenheimer visited dozens of schools nationwide public and private urban and rural to present the compelling tales that frame this book He consulted with experts read volumes of studies and came to strong and persuasive conclusions that the essentials of learning have been gradually forgotten and that they matter much more than the novelties of technology He argues that every time we computerize a science class or shut down a music program to pay for new hardware we lose sight of what our priority should be enlightened basics Broad in scope and investigative in treatment The Flickering Mind will not only contribute to a vital public conversation about what our schools can and should be it will define the debate

Your Child's Growing Mind Jane Healy, 2011-04-20 The completely updated and expanded version of the 1987 classic hailed by parents and educators everywhere

Reaching Out Without Dumbing Down Marva J. Dawn, 1995-07-10 Working to bridge opposing sides in the various worship wars Marva Dawn here writes to help local parishes and denominations think more profoundly about both worship and culture

Technology as Magic Richard Stivers, Peter Stirk, 2001-08-01 What gives the mass media particularly advertising and television their extraordinary power over our lives so that even the most jaded and sophisticated among us are troubled and fascinated by their allure The secret according to Richard Stivers in this brilliant new book lies in the curious relationship between technology and magic Stivers argues the two are now related to one another in such a way that each has taken on important characteristics of the other His contention is that our expectations for technology have become magical to the point that they have generated a multitude of imitation technologies that function as magical practices These imitation technologies flourish in the fields of psychology management administration and the mass media and their paramount purpose in human adjustment and control Advertising and television programs in particular contain the key magical rituals of our civilization In a fascinating analysis of television programming Stivers shows how various genres news sports game shows soap operas sitcoms etc have their

distinct mythological symbols Through dramatized information they symbolically connect consumer goods and services to desired outcomes the utopian goals of success happiness and health thus enveloping technology both real and imitation in a magical cocoon

Mind, Heart, and Spirit Heather Cardin, 2009 *Mind Heart and Spirit Educators Speak* is a collection of real life stories from a diverse group of educators on a wide range of issues such as how to deal with difficult students the role of parents and religion in a child's education and the similarities and differences in educating children in different cultures across the globe Filled with interesting anecdotes and personal accounts this is an intimate sometimes frustrating sometimes exhilarating insight into the experiences of all these educators as they have struggled to overcome various challenges in educating children Their passion for teaching and their devotion to their students come shining through and offer a glimpse of the important role that Baha'i education with its emphasis on unity tolerance and diversity can play in shaping the lives of young people today

The Media Creates Us in Its Image and Other Essays on Technology and Culture Richard Stivers, 2020-03-31 *The Media Creates Us in Its Image and Other Essays on Technology and Culture* proposes that modern technology seriously influences every aspect of culture and personality Technology shapes our beliefs and values and even how we think of ourselves It affects religion morality education language communication and sexual identity Every institution every organization is brought under its purview This book attempts to awaken the reader to the destructive side of modern technology that exists side by side with its constructive side What modern technology is destroying however is the very meaning of being human The essay *The Media Creates Us in Its Image* makes this case most dramatically The book asks the reader the following question Is what you have gained from the use of modern technology more important than what you have lost How do we once again bring technology under our control in the face of its inexorable progress

Bridging the Learning/assessment Gap Wayne Jennings, Joan Caulfield, 2005 Offers the reader powerful brain compatible and research based teaching and learning strategies based on how the brain works This book presents educators with a useful framework for understanding how to design instruction It will help answer questions about why some approaches to teaching are more successful than others

The Future of Leadership Michael A Genovese, 2015-07-24 *The Future of Leadership* considers how the rapid changes of today will affect the leaders of tomorrow Renowned Leadership scholar Michael A Genovese argues that one of the key challenges for future leaders will be to effectively and constructively manage the hyper change taking place both within organizations and in the broader social and political spheres Taking a Futures Studies approach to envision the state of leadership in the coming decades Genovese also provides case studies of leaders who have already demonstrated the mind and skill sets necessary to successfully manage rapid change

Living Simply with Children Marie Sherlock, 2010-05-26 Raising children ranks as one of life's most rewarding adventures Yet between Mom and Dad working full time jobs endless carpooling of overscheduled youngsters and the never ending pressures to buy and consume family life can be incredibly needlessly complex What if you could find a way to spend more time with your children replace

unnecessary activities with meaningful ones and teach your children an invaluable life lesson in the process Living Simply with Children offers a realistic blueprint for zeroing in on the pleasures of family life How and why to live simply and find more time to be with your children Activities and rituals that bring out the best in every family member Realistic ways to reclaim your children from corporate America Helping children of any age deal with peer pressure Raising kids who care about people and the planet How to focus on the good stuff with less stuff Including sections on limiting television environmentally friendly practices celebrating the holidays and tapping into the growing community of families who embrace simplicity this inspiring guide will show you how to raise children according to your own values and not those of the consumer culture as you enjoy both quality and quantity time with your family *Encyclopedia of Distance Learning* Howard, Caroline,Boettcher, Judith V.,Justice, Lorraine,Schenk, Karen D.,Rogers, Patricia L.,Berg, Gary A.,2005-04-30 This encyclopedia offers the most comprehensive coverage of the issues concepts trends and technologies of distance learning More than 450 international contributors from over 50 countries Provided by publisher *Set Free Childhood* Martin Large,2003 Children watch TV and use computers for five hours daily on average But electronic media demands conflict with the needs of children The result Record levels of learning difficulties obesity eating disorders sleep problems language delay aggressive behaviour anxiety and children on fast forward Set Free Childhood shows how to counter screen culture and create a calmer more enjoyable family life *The Architect's Brain* Harry Francis Mallgrave,2011-05-25 The Architect s Brain Neuroscience Creativity and Architecture is the first book to consider the relationship between the neurosciences and architecture offering a compelling and provocative study in the field of architectural theory Explores various moments of architectural thought over the last 500 years as a cognitive manifestation of philosophical psychological and physiological theory Looks at architectural thought through the lens of the remarkable insights of contemporary neuroscience particularly as they have advanced within the last decade Demonstrates the neurological justification for some very timeless architectural ideas from the multisensory nature of the architectural experience to the essential relationship of ambiguity and metaphor to creative thinking
