Energy And Humanity:

Energy and Humanity Jami Hossain, 2019-10-29 Sometime around three million years ago the first hominid walked on this planet. In the time which has elapsed since then the descendant of this biped has evolved to reach the top of the food chain. Furthermore, it has manipulated other lifeforms and Earth's resources in a manner that makes these entirely subservient to only one species, homo sapiens. In a period less than 0.007% of Earth's age, man has dramatically altered both the biosphere and the climate. This text argues that intelligent manipulation of energy is at the heart of human supremacy. Energy is intertwined in an intricate manner with everything that happens around us. From the very beginning, nearly three million years ago up until today, the human race has evolved and progressed by gaining mastery and control over energy. This book presents an insightful description of the evolution of human civilization from an energy perspective, showing that energy is the vehicle that has catapulted the human race to a commanding position on Earth. From rudimentary Stone Age tools to classical physics, from animal power to the steam engine, and from relativity and quantum theory to geopolitics and climate change, drawing upon multiple disciplines, it weaves a fascinating story of the history of energy in human civilization. It also discusses the dark side of energy, exemplified by climate change, pollution, and deforestation, which is compelling modern human civilization to once again go into an energy transition mode, as well as those forms of energy which can counteract such forces: renewable and smart energy and their associated innovations.

Energy Richard Rhodes, 2019-06-11 A meticulously researched *The New York Times* Book Review examination of energy transitions over time and an exploration of the current challenges presented by global warming, a surging world population, and renewable energy, from Pulitzer Prize and National Book Award winning author Richard Rhodes. People have lived and died, businesses have prospered and failed, and nations have risen to world power and declined, all over energy challenges. Through an unforgettable cast of characters, Pulitzer Prize winning author Richard Rhodes explains how wood gave way to coal, and coal made room for oil, as we now turn to natural gas, nuclear power, and renewable energy. Entertaining and informative, a powerful look at the importance of science. NPR.org Rhodes looks back on five centuries of progress through such influential figures as Queen Elizabeth I, King James I, Benjamin Franklin, Herman Melville, John D. Rockefeller, and Henry Ford. In his magisterial history, a tour de force of popular science, Kirkus Reviews starred review Rhodes shows how breakthroughs in energy production occurred, from animal and waterpower to the steam engine, from internal combustion to the electric motor. He looks at the current energy landscape with a focus on how wind energy is competing for dominance with vast supplies of coal and natural gas. He also addresses the specter of global warming and a population hurtling towards ten billion by 2100. Human beings have confronted the problem of how to draw energy from raw material since the beginning of time. Each invention, each discovery, each adaptation brought further challenges, and through such transformations we arrived at where we are today. A beautifully written, often inspiring saga of ingenuity and progress. *Energy* brings facts, context, and clarity to a key, often contentious subject. Booklist starred
