Energy Labels And Standards:

Energy Labels & Standards International Energy Agency, Organisation for Economic Co-operation and Development, 2000 Within the foreseeable future refrigerators will be using 30% less electricity in some countries Homes in the United States will be emitting 4% less carbon dioxide Dozens of other common energy using products will have become cleaner and more energy efficient And all because of the growing use of energy labels and standards in industrialised countries Energy labels and standards are only one way in which governments can diminish energy use improve performance and slash greenhouse gas emissions But they have proved remarkably effective and their use is steadily spreading This report by the International Energy Agency chronicles a number of success stories and offers suggestions on how they can be replicated This study the first in a planned series of Energy Efficiency Policy Profiles analyses existing programmes provides guidance for programmes now under consideration and points the way to possible international collaboration It highlights the key elements in successful programmes

The Effectiveness of Policy Instruments for Energy-Efficiency Improvement in Firms Kornelis Blok, Henri L.F. de Groot, Esther E.M. Luiten, Martijn G. Rietbergen, 2004-03-31 Improvement of energy efficiency is one of the important options for reducing greenhouse gas emissions According to the Third Assessment Report of the Intergovernmental Panel on Climate Change hundreds of technologies for improving the end use energy efficiency make up more than half of the global potential for greenhouse gas emission reduction in the short and medium term 2010 2020 IPCC 2001 see also WEA 2000 An important next question is how these options can actually be deployed More specifically one may ask what role governments can play by using policy instruments to promote the deployment of energy efficient technologies In this introductory Chapter we will first set out the aim of the research described in this book Then we will discuss the various policy instruments that may play a role in energy efficiency improvement Next the various aspects important for characterising policy instruments will be discussed and the various disciplinary approaches are listed Finally the outline of the complete book will be given

Business and Sustainability Achim Lang, Hannah Murphy, 2014-09-01 Demands for sustainability policies have set new challenges for business both on the individual firm level and on the level of organized business interests This edited volume brings together economic social environmental and cultural dimensions of sustainability that comprise different challenges for business processes and activities The aim is to develop an overarching framework to the study of sustainability and business and to advance an interdisciplinary analytical perspective The book establishes a balanced account that equally represents business as problem causers as well as problem solvers and therefore responds to the urgent need to investigate the intersection between sustainability issues and business participation

Development with Sustainable Use of Electricity Jørgen S. Nørgård, Adam Gula, A. de Almeida, 2012-12-06 The rather

young field of research into electricity savings is attracting increasing attention since low electricity consumption is a vital component of environmentally sustainable development. The potential benefits from using less electricity without sacrificing quality of life are immense as the book shows with case studies from Eastern and Western Europe and the USA. Saving electricity means that the expense of constructing scores of power plants can be saved and that their economic and environmental impact will vanish. Audience Can be read with profit by any graduate Suitable as a reference work for Master s and Doctoral students as well as for others working on environmental issues in general and electricity savings in particular.

Energy Efficiency Great Britain: Parliament: House of Lords: Science and Technology Committee, 2005-07-15 Energy Efficiency 2nd report of session 2005 06 Vol 2 Evidence Comparison of energy efficient and green buildings Shrestha, Shritu, 2016-04-18 The adverse environmental impacts from inefficient building construction increase if measures to reduce energy and resource use through stringent building policies and efficient technology are not implemented in developed and developing countries. To illustrate a holistic approach to reducing buildings energy and resources the comparison of energy efficient and green buildings in terms of their technological aspects and their policy context in developed and developing countries mainly in Europe the USA and India is presented together with a policy package recommendation for Nepal. A quality review of multiple literature sources supported by various expert opinions were the methods used for this in depth analysis. It discusses that mandatory building standards voluntary labels information instruments and financial incentives are the most effective combination for the shift towards market transformation that results in a higher share of energy efficient and green buildings. The lesson such as higher compliance with and enforcement of building energy standards can be seen in developed countries e.g. Germany. Looking at a building s life cycle perspective it is not sufficient to focus solely on operational energy reduction in higher energy efficient buildings as this is achieved by the increased use of energy intensive materials. Green requirements must be considered in updating building energy standards and labels particularly for developed countries. Green building certification will also become more effective when the stringency of energy standards is higher and when the whole building life cycle assessment is considered. Due to the increasing scarcity of energy and resources many developing countries are forced to face up to the need for holistic green buildings. Although baseline standards are not as high as in most developed countries and national financial support is low the gradual move towards making the standards more stringent and incorporating the wider scope of resource saving are positive developments in developing countries e.g. India. However to achieve significant success strategies must include the establishment of a suitable funding environment a political commitment and a strong government vision for long term and sustainable building construction. The challenges faced by Nepal are even greater due to the fast pace of urban growth and the absence of energy and resource efficient buildings policies highlighting the need for an effective policy package. Overall this dissertation demonstrates how energy efficient and green buildings are interlinked. Green buildings reinforced with higher levels of

energy efficiency and energy efficient buildings incorporating green requirements are stepping stones for achieving greater building energy and resource efficiencies And a suitable policy package fosters its development
