Energy Performance Of Buildings:

Improving the Energy Performance of Buildings Charles P. Ries, Joseph Jenkins, Oliver Wise, 2009-09-21 This study examines how policies to increase energy efficiency in buildings in the European Union and Australia have worked and draws implications for the design of similar public policies for the United States It appears that effective policies to promote energy efficiency can be devised using information disclosure building codes financial incentives and benchmarking Insights are presented to help designers of analogous U S policies

Energy Performance of Buildings Sofia-Natalia Boemi, Olatz Irulegi, Mattheos Santamouris, 2015-11-23 This book analyzes the trends and technologies of green and energy efficient building identifying strategies for implementing energy savings and enabling the use of renewable resources in residential commercial healthcare and educational building sectors The authors focus on best practices in temperate climates providing in depth coverage of urban heat island climate change and fuel poverty mitigation through architectural optimization leveraging renewable energy sources and utilization of cutting edge cooling materials Pragmatic emphasis is placed on improving the energy performance of existing building stock to meet short and long term objectives of climate and energy conservation strategies Engineers architects designers students policy makers and efficiency professionals will all gain valuable insights and ideas from this practical handbook to greening the built environment

Energy Performance in Buildings and Quality of Life Kristian Fabbri, 2020-12-10 Buildings allow several kinds of human activity work eat sleep play etc and they have a role in determining quality of life ugly and uncomfortable buildings can be the worst place to live The energy performance of buildings has a special role in improving and guaranteeing quality of life because it concerns architectural design energy cost consumption and energy poverty and thermal comfort both indoor and outdoor Following a multidisciplinary approach we present several case studies and articles about the correlation between building and quality of life The included research highlights the relationship between BEP and quality of life in terms of wellbeing and thermal comfort and household smartness following UE Directive 844 2018 as well as the reduction of energy poverty and the impact of buildings on the environment and global warming Also in this book is a city scale study that attempts to evaluate the effect of climate change on building performance and building energy efficiency mapping and moreover reports some cases of indoor environment quality as well as thermal comfort in nearly zero energy buildings finally detailed scientific literature on energy poverty and outdoor wellbeing quality of life are presented

Energy Performance of Residential Buildings Mat Santamouris, 2010-09-23 Energy Rating is a crucial consideration in modern building design affirmed by the new EC Directive on the energy performance of buildings Energy represents a high percentage of the running costs of a building and has a significant impact on the comfort of the occupants This book represents detailed information on energy rating of residential buildings covering Theoretical and experimental energy rating techniques reviewing the state of the art and offering guidance on the in situ identification of the UA and gA values of buildings New experimental protocols to evaluate

energy performance detailing a flexible new approach based on actual energy consumption Data are collected using the Billed Energy Protocol BEP and Monitored Energy Protocol MEP Energy Normalization techniques describing established methods plus a new Climate Severity Index which offers significant benefits to the user Also included in this book are audit forms and a CD ROM for applying the new rating methodology The software prepared in Excel is easy to use can be widely applied using both deterministic and experimental methods and can be adapted to national peculiarities and energy policy criteria Energy Performance of Residential Buildings offers full and clear treatment of the key issues and will be an invaluable source of information for energy experts building engineers architects physicists project managers and local authorities The book stems from the EC funded SAVE project entitled EUROCLASS Participating institutes included University of Athens Greece Belgium Building Research Institute Belgium University of Seville Spain Royal Institute of Technology Sweden *Energy performance of buildings - Overall energy use and definition of energy ratings* ,2008

Energy Performance Buildings George Baird,2018-01-18 This book deals with the concerns of everyone involved with the use of energy in buildings It is written principle for those with a direct professional interest in the energy performance of buildings *Energy Performance of Buildings Directive* David Bleicher,2008 [Energy Performance of Buildings 2008: Special Report](#) , **Energy Performance of Residential Buildings** Mat Santamouris,2004-12 First Published in 2004 Routledge is an imprint of Taylor Francis an informa company **Rating the Energy Performance of Buildings** ,2004 In order to succeed in developing a more sustainable society buildings will need to be continuously improved This paper discusses how to rate the energy performance of buildings A brief review of recent approaches to energy rating is presented It illustrates that there is no single correct or wrong concept but one needs to be aware of the relative impact of the strategies Different strategies of setting energy efficiency standards are discussed and the advantages of the minimum life cycle cost are shown Indicators for building energy rating based on simulations aggregated statistics and expert knowledge are discussed and illustrated in order to demonstrate strengths and weaknesses of each approach In addition the importance of considering the level of amenities offered is presented Attributes of a rating procedure based on three elements flexible enough for recognizing different strategies to achieve energy conservation is proposed *Materials for Energy Efficiency and Thermal Comfort in Buildings* Matthew R Hall,2010-04-21 Almost half of the total energy produced in the developed world is inefficiently used to heat cool ventilate and control humidity in buildings to meet the increasingly high thermal comfort levels demanded by occupants The utilisation of advanced materials and passive technologies in buildings would substantially reduce the energy demand and improve the environmental impact and carbon footprint of building stock worldwide Materials for energy efficiency and thermal comfort in buildings critically reviews the advanced building materials applicable for improving the built environment Part one reviews both fundamental building physics and occupant comfort in buildings from heat and mass transport hygrothermal behaviour and ventilation on to thermal comfort and health and safety

requirements Part two details the development of advanced materials and sustainable technologies for application in buildings beginning with a review of lifecycle assessment and environmental profiling of materials The section moves on to review thermal insulation materials materials for heat and moisture control and heat energy storage and passive cooling technologies Part two concludes with coverage of modern methods of construction roofing design and technology and benchmarking of fa ades for optimised building thermal performance Finally Part three reviews the application of advanced materials design and technologies in a range of existing and new building types including domestic commercial and high performance buildings and buildings in hot and tropical climates This book is of particular use to mechanical electrical and HVAC engineers architects and low energy building practitioners worldwide as well as to academics and researchers in the fields of building physics civil and building engineering and materials science Explores improving energy efficiency and thermal comfort through material selection and sustainable technologies Documents the development of advanced materials and sustainable technologies for applications in building design and construction Examines fundamental building physics and occupant comfort in buildings featuring heat and mass transport hygrothermal behaviour and ventilation

Handbook of Energy Efficiency in Buildings Umberto Desideri, Francesco Asdrubali, 2018-11-12 Handbook of Energy Efficiency in Buildings A Life Cycle Approach offers a comprehensive and in depth coverage of the subject with a further focus on the Life Cycle The editors renowned academics invited a diverse group of researchers to develop original chapters for the book and managed to well integrate all contributions in a consistent volume Sections cover the role of the building sector on energy consumption and greenhouse gas emissions international technical standards laws and regulations building energy efficiency and zero energy consumption buildings the life cycle assessment of buildings from construction to decommissioning and other timely topics The multidisciplinary approach to the subject makes it valuable for researchers and industry based Civil Construction and Architectural Engineers Researchers in related fields as built environment energy and sustainability at an urban scale will also benefit from the books integrated perspective Presents a complete and thorough coverage of energy efficiency in buildings Provides an integrated approach to all the different elements that impact energy efficiency Contains coverage of worldwide regulation

Recast of the Energy Performance of Buildings Directive, 2009

Energy Efficiency in Buildings José Manuel Andújar, Sergio Gómez Melgar, 2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO₂ per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed
