Anti-Social Engineering the Hyper-Manipulated Self Brian Taylor, 2010-11-23 Chasing philosophers through the ages following our own ideas about the self to dismantle both himself and modernity the author brings in this tiny work with candour wisdom and depth a dismantling of thought a critique of the species a pathway to virtue We are not talking about God here nor even the grand scheme of society we wonder about ourselves By realizing when someone or something asks us to believe in it in its intention to create some reality out of an idea we can begin to wonder about the value of following the rule If modernity is the cause of complexity and systemic complexity is the cause of the rampant ineptitude that keeps rearing its ugly head and we in our infinite confusion attempt only to counter this problem by adding further complexity are we not just denying there is even a problem For sample chapters visit www.antisocialengineering.com

Morgan Tait,2025-07-04 Why are we failing to make meaningful progress on mitigating and adapting to climate change A standard reply all too easy for academics to endorse is that we understand the problem theoretically but practical political problems are hard to solve for all the usual practical political reasons This book challenges this narrative Tensions in the philosophical assumptions of climate change activism must be resolved before practical policy choices can be coherently implemented The book draws attention to basic trade offs between three broad ideological commitments all of which seem indispensable but which don t play well together as a trio liberalism environmentalism and philosophical naturalism It is argued that a reconciliation of these ideological commitments will require greater humility and some toothy concessions on the part of liberals environmentalists and even naturalists of an activist bent What we need is politically defensible ecologically sustainable policy that does not implicitly rely on supernatural or superhuman interventions as current policy options do Successful environmental policy must acknowledge not only planetary limits but also the natural limits of human agency in a liberal world There is a wealth of natural scientific analysis of climate change and ecology as well as a vast literature of the economics sociology and political science of environmental governance Yet there is a surprising gap in the literature a lack of systematic efforts to examine the intersection of philosophy of science including the human sciences ethics and environmental governance in the Anthropocene This book seeks to address that gap **Knowledge Engineering and Knowledge Management** Annette ten Teije,Johanna Völker,Siegfried Handschuh,Heiner Stuckenschmidt,Mathieu d'Acquin,Andriy Nikolov,Nathalie Aussenac-Gilles,Nathalie Hernandez,2012-09-13 This book constitutes the refereed proceedings of the 18th International Conference on Knowledge Engineering and Knowledge Management EKAW 2012 held in Galway City Ireland in October 2012 The 44 revised full papers were carefully reviewed and selected from 107 submissions The papers are organized in topical sections on knowledge extraction and enrichment natural language processing linked data ontology engineering and evaluation social and cognitive aspects of knowledge representation

Leveson, 2023-11-14 A comprehensive up to date introduction to the foundations of classical safety engineering with an emphasis on preparing for future challenges Systems today are orders of magnitude more complex than in the past and their complexity is increasing exponentially Preventing accidents and losses in such systems requires a holistic perspective that can accommodate unprecedented types of technology and design This textbook teaches the foundations of classical safety engineering while incorporating the principles of systems thinking and systems theory Beginning with the framing and lessons of her classic text Safeware Nancy Leveson builds on established knowledge and brings the field up to date challenging old approaches and introducing new ones This essential book provides the core information required to build safety critical systems today and in the future including coverage of the historical and legal frameworks in which the field operates as well as discussions of risk ethics and policy implications Presents cutting edge concepts anticipating the safety challenges of the future alongside thorough treatment of historical practices and ideas Provides a comprehensive introduction to the foundations of safety engineering Covers accident analysis hazard analysis design for safety human factors management and operations Incorporates extensive examples of real world accidents and applications Ideal for students new to safety engineering as well as professionals looking to keep pace with a rapidly changing field **Democratic Consolidation in Eastern Europe: Volume 1: Institutional Engineering** Jan Zielonka, 2001 This is the first volume in a series of books on democratic consolidation in Eastern Europe The series focuses on three major aspects of democratic consolidation in Eastern Europe institutional engineering transnational pressures and civil society This first volume analyses constraints on and opportunities of institutional engineering in Eastern Europe to what extent and how elites in Eastern Europe have been able to shape if not manipulate the politics of democratic consolidation through institutional means The aim is to contrast a set of democracy theories with empirical evidence accumulated in Eastern Europe over the last ten years The volume tries to avoid complex debates about definitions

methods and the uses and misuses of comparative research. Instead, it tries to establish what has really happened in the region and which of the existing theories have proved helpful in explaining these developments. The volume starts with a presentation of conceptual and comparative frameworks followed by in-depth empirical analyses of the thirteen individual countries undergoing democratic consolidation. The first conceptual and comparative part contains three chapters. The first chapter explains what institutional engineering is about and describes our experiences with institutional engineering in former transitions to democracy. It also focuses on the import and export of institutional designs. The second chapter analyses the utility of constitutions in the process of democratic consolidation. The third chapter compares constitutional designs and problems of implementation in Southern and Eastern Europe. The empirical case studies deal with the following countries: Estonia, Latvia, Lithuania, Bulgaria, Romania, Ukraine, Russia, Belarus, the Czech Republic, Slovakia, Slovenia, Hungary, and Poland. And the conclusions evaluate the enormous impact of institutions on politics in Eastern Europe and show how central constitutional designs are to the institutional engineering in the societies undergoing transitions to democracy.
