Engineering Ceramics '96: Higher Reliability through Processing G.N. Babini, Miroslav Haviar, Pavol Sajgalík, 2012-12-06 Despite the significant progress which has been made in developing of ceramic materials desired for engineering applications their mass production is still not on expected level Among the key factors hindering higher exploitation of these materials the problems in processing were identified The processing comprises powder production mixing techniques forming and sintering All of them are equally important and all of them can introduce defects into the material Besides improvement in processing the properties of ceramic materials can be considerably improved by the creation of composites Composites formed at micro or macro level are able to form more flaw tolerant material Considerable research activities working on above mentioned phenomena are in progress at industrial laboratories as well as other research centres This volume presents the contributions to the Advanced Research Workshop Engineering Ceramics 96 with 65 participants from 21 countries held on 12th 15th May 1996 at Smolenice Castle Slovakia the conference site of Slovak Academy of Sciences The book covers research activities on engineering ceramic materials and gives an overview with respect to recent developments

Materials Science of Carbides, Nitrides and Borides Yury G. Gogotsi, R.A. Andrievski, 2012-12-06 A survey of current research on a wide range of carbide nitride and boride materials covering the general issues relevant to the development and characterisation of a variety of advanced materials Topics include structure and electronic properties modeling processing high temperature chemistry oxidation and corrosion mechanical behaviour manufacturing and applications The volume complements more specialised books on specific materials as well as more general texts on ceramics or hard materials presenting a survey of materials research as a key to technological development After decades of research the materials are being used in electronics wear resistant refractory and other applications but numerous new applications are possible Roughly equal numbers of papers cover theoretical and experimental research in the general field of materials science of refractory materials Audience Researchers and graduate students in materials science and engineering

Precursor-Derived Ceramics Joachim Bill, Fumihiro Wakai, Fritz Aldinger, 2008-07-11 The production of high purity ceramic materials from low molecular weight inorganic or organoelement precursors is a topic of increasing relevance within materials science With this emerging technology it is possible to precisely tailor the properties of the ceramic material which enables new high temperature or electronic applications Every materials scientist and engineer involved in the research and development of new high performance ceramic materials will find these results presented at a recent workshop of the Max Planck Gesellschaft of great importance for his own work
