Assessments In-Ju Kim,2017-04-25 This book examines pedestrian shoe floor slip resistance from an engineering standpoint
in order to better understand friction and wear behavior This analysis includes an extensive investigation into the surface
properties of shoes and floor and the measurement of dynamic friction and other mechanical and physical aspects of shoe
floor tribology Lastly the book proposes a measurement concept for the identification and classification of operational floor
surfaces under a range of different conditions Novel techniques and methods are proposed that can improve the reliability of
slip resistance assessments The current state of knowledge is critically examined and discussed from a tribological
perspective including aspects like friction wear lubrication and the mechanical behavior of shoes floors and their wider
environment Further the book reports on extensive experimental investigations into the topographical characteristics of shoe
and floor surfaces and how they affect slip resistance Slips resulting in pedestrian falls are a major cause of injuries and
deaths for all age groups This important book provides essential insights for researchers practicing engineers and public
safety officials wishing to learn about how the risk of pedestrian slips can be assessed and understood *Subject Guide to*
