Geometric Optics on Phase Space

Kurt Bernardo Wolf, 2004-07-21 Symplectic geometry well known as the basic structure of Hamiltonian mechanics is also the foundation of optics In fact optical systems geometric or wave have an even richer symmetry structure than mechanical ones classical or quantum The symmetries underlying the geometric model of light are based on the symplectic group Geometric Optics on Phase Space develops both geometric optics and group theory from first principles in their Hamiltonian formulation on phase space This treatise provides the

mathematical background and also collects a host of useful methods of practical importance particularly the fractional Fourier transform currently used for image processing The reader will appreciate the beautiful similarities between Hamilton's mechanics and this approach to optics The appendices link the geometry thus introduced to wave optics through Lie methods The book addresses researchers and graduate students

Symmetries in Physics Alejandro Frank, Kurt B. Wolf, 2012-12-06 This volume gives a broad overview on symmetry methods applied to molecular and nuclear physics to particle physics decay processes and phase space dynamics The thoroughly edited contributions should be of interest not only to scientists but also to those that want to see how symmetry considerations are put to work in twentieth century physics

Multivariate Approximation Theory IV CHUI, SCHEMP, ZELLER, 2013-03-08 Multivariate Approximation Theory forms a rapidly evolving field in Applied Mathematics The reason for its particular current interest lies in its impact on Computer Aided Geometric Design CAGD Image Processing Pattern Recognition and Multidimensional Signal Processing Multivariate Bernstein polynomials and box splines for example play an important role in CAGD Conversely the highly important filter bank design problem of signal processing for instance gives rise to a new family of multivariate approximating functions the Gabor wavelets with interesting technological and biological applications The conferences on Multivariate Approximation Theory held at the Mathematical Research Institute at Oberwolfach Black Forest in 1976 1979 1982 1985 and 1989 reflect the progress made in this area and related fields The present volume which is a continuation of the preceding volumes Constructive Theory of Functions of Several Variables Lecture Notes in Mathematics 571 1977 Multivariate Approximation Theory ISNM 51 1979 Multivariate Approximation Theory II ISNM 61 1982 Multivariate Approximation Theory III ISNM 75 1985 is based on the conference held on February 12-18 1989 It includes most of the lectures presented at the Oberwolfach meeting and reveals the wide spectrum of activities in the field of multivariate approximation The organizers are grateful to the Director of the Oberwolfach Mathematical Research Institute Professor Dr M Barner and his staff for providing the facilities and to Dr G Baszenski Professor Dr F J Delvos Dr H

Lectures On Phase Transitions And The Renormalization Group Nigel

Goldenfeld,2018-03-08 Covering the elementary aspects of the physics of phases transitions and the renormalization group this popular book is widely used both for core graduate statistical mechanics courses as well as for more specialized courses Emphasizing understanding and clarity rather than technical manipulation these lectures de mystify the subject and show precisely how things work Goldenfeld keeps in mind a reader who wants to understand why things are done what the results are and what in principle can go wrong The book reaches both experimentalists and theorists students and even active researchers and assumes only a prior knowledge of statistical mechanics at the introductory graduate level Advanced never before printed topics on the applications of renormalization group far from equilibrium and to partial differential equations add to the uniqueness of this book *Geometric Function Theory and Applications of Complex Analysis to Mechanics* Reiner Kühnau,Wolfgang Tutschke,1991 **New Perspectives In The Physics Of Mesoscopic Systems: Quantum-like Descriptions And Macroscopic Cohe** Renato Fedele,Salvatore De Martino,Silvio De Siena,S De Nicola,Gennaro Miele,1997-10-22 The very fast progress registered during the last few decades in physics has clearly shown the great necessity to give an interdisciplinary character to the scientific programs This has made the intersection between different branches of physics more and more important This volume contains theoretical and experimental results concerning the relationships among quantum like models macroscopic coherence and stochastic mechanics The wide range of topics covering particle accelerator physics plasma physics quantum optics superconductivities and mesoscopic gravitation is presented from a cross disciplinary point of view **Optics News** ,1986 Includes a directory of members in one issue each year **Semiclassical Physics** Matthias Brack,Rajat Bhaduri,2018-03-05 This book attempts to convey to the reader that semiclassical physics can be fun as well as useful for understanding quantum fluctuations in interacting many body systems It presents applications to finite fermion systems in diverse areas of physics **Computational Plasma Physics** Toshi Tajima,2018-03-14 The physics of plasmas is an extremely rich and complex subject as the variety of topics addressed in this book demonstrates This richness and complexity demands new and powerful techniques for investigating plasma physics An outgrowth from his graduate course teaching now with corrections Tajima s text provides not only a lucid introduction to computational plasma physics but also offers the reader many examples of the way numerical modeling properly handled can provide valuable physical understanding of the nonlinear aspects so often encountered in both laboratory and astrophysical plasmas Included here are computational methods for modern nonlinear physics as applied to hydrodynamic turbulence solitons fast reconnection of magnetic fields anomalous transports dynamics of the sun and more The text contains examples of problems now solved using computational techniques including those concerning finite size particles spectral techniques implicit differencing gyrokinetic approaches and particle simulation *Geometric Methods in Physics XXXVIII* Piotr Kielanowski,Anatol Odziejewicz,Emma Previato,2020-10-27 The book consists of articles based on the XXXVIII Bia owie a Workshop on Geometric Methods in Physics 2019 The series of Bia owie a workshops attended by a community of experts at

the crossroads of mathematics and physics is a major annual event in the field The works in this book based on presentations given at the workshop are previously unpublished at the cutting edge of current research typically grounded in geometry and analysis with applications to classical and quantum physics For the past eight years the Bia owie a Workshops have been complemented by a School on Geometry and Physics comprising series of advanced lectures for graduate students and early career researchers The extended abstracts of the five lecture series that were given in the eighth school are included The unique character of the Workshop and School series draws on the venue a famous historical cultural and environmental site in the Bia owie a forest a UNESCO World Heritage Centre in the east of Poland lectures are given in the Nature and Forest Museum and local traditions are interwoven with the scientific activities The chapter Toeplitz Extensions in Noncommutative Topology and Mathematical Physics is available open access under a Creative Commons Attribution 4 0 International License via link springer.com
