Ghose, 2013-11-11 Depression is one of the commonest problems in old age Yet until recently old people were systematically excluded from participating in drug trials and similar investigations As a result knowledge regarding incidence natural history and management of depression in the elderly are somewhat limited It is now well established that old people are sensitive to most psychotropic drugs and they tend to suffer from adverse effects and side effects of antidepressant drugs more frequently than any other age group These are considered to be due to age related physiological changes In addition because of the frequent association with multiple pathology the elderly are likely to receive polypharmacy which further complicates the management of antidepressant drug therapy The aim of this book is to provide a comprehensive guidance on the drug therapy of depression for the clinicians involved in the health care of the elderly In the first section epidemiology presentations and assessment of depression in old age and neuroendocrine abnormalities observed in patients with depression are briefly discussed However it mainly deals with the problems of antidepressant drug therapy such as which antidepressant to prescribe how to monitor efficacy and side effects what is the adequate dose how long to treat a single episode of depression and who requires long term medication Information regarding pharmacology side effects adverse effects drug interaction and pharmacokinetics of most currently available drugs are provided Special emphasis has been given on continuation therapy and the choice of an antidepressant drug and their long term safety

Brain Chemistry and Mental Disease Beng Ho, 2013-03-13 This volume contains the proceedings of the fourth international symposium held in November 1970 at the Texas Research Institute of Mental Sciences in Houston Leading psychiatrists biochemists and pharmacologists from the United States and Great Britain presented new material and reviewed current concepts concerning schizophrenia and the affective disorders with particular reference to the neurochemical basis of the etiology and chemotherapy of these diseases Although the multiple mechanisms of mental disease are still not fully understood substantial progress has definitely been made The greatest contribution has come through the development of new therapeutic agents that not only provide invaluable help to the mentally ill but serve as chemical tools for studying the biological mechanisms associated with the disease state Studies concerning the proposed catecholamine and indolealkylamine hypotheses for

affective disorders and the possible formation of endogenous toxins in schizophrenia have stimulated significant new research This book presents new studies of schizophrenia and the affective disorders in one volume It is our hope that it represents an effective integration of basic biochemical and pharmacological research with current clinical findings and that it will increase understanding of the etiology of mental disease and provide an impetus for the development of more effective therapeutic agents We thank Drs Gordon Farrell Samuel Gershon A Horita Irwin Kopin and Joseph Schildkraut for their help with the organization of the meeting and for chairing the corresponding sessions

Guidelines for the Use of Psychotropic Drugs H.C. Stancer,P.E. Garfinkel,V.M. Rakoff,2012-12-06 to the Clinician Although huge quantities of drugs are dispensed daily by psychiatrists there appears to be insufficient concern about the short and long term effects of these

exogenous agents on the recipients our patients Many clinicians have been trained at a time when knowledge of clinical psychopharmacology was superficial at best and recent trainees do not necessarily have access to new constantly changing relevant information The busy clinician is frequently dependent upon the limited knowledge dispensed by the drug company representatives and naturally shies away from many of the more esoteric contributions appearing in the literature Because of the foregoing issues the Executive of the Clarke Institute of Psychiatry of the University of Toronto with the financial support of the Ministry of Health of the Government of Ontario organized an international symposium on May 14-17 1982 to bring together some of the acknowledged experts in clinical psychopharmacology This book is in part a reflection of that symposium The editors are aware that a contributed volume however tightly edited is not necessarily a textbook Notwithstanding this it was thought to be important to assemble expert opinion on current important issues of immediate concern to the practicing clinician With this in mind the chapters have been organized around five themes Schizophrenia Affective disorders and Anxiety are clearly important since they are the major targets of drug use in psychiatry
