Nutrient Requirements of Domesticated Ruminants , Primary Industries Standing Committee,2007-08-16 Nutrient Requirements of Domesticated Ruminants draws on the most up to date research on the energy protein mineral vitamin and water requirements of beef and dairy cattle sheep and goats It defines the responses of animals in weight change milk production and wool growth to quantitative and qualitative changes in their feed supply It has particular application to grazing animals Factors affecting the intake of feed are taken into account and recommendations are given according to the production systems being used for instance the feed intake of a grazing animal is affected by a larger number of variables than a housed animal Examples of the estimation of the energy and nutrients required for the different production systems are given as well as the production expected from predicted feed intakes The interactions between the grazing animal the pasture and any supplementary feeds are complex involving herbage availability diet selection and substitution To facilitate the application of these recommendations to particular grazing situations readers are directed to decision support tools and spreadsheet programs Nutrient Requirements of Domesticated Ruminants is based on the benchmark publication Feeding Standards for Australian Livestock Ruminants published in 1990 by CSIRO PUBLISHING on behalf of the Standing Committee on Agriculture It provides comprehensive and useful information for graziers livestock advisors veterinarians feed manufacturers and animal nutrition researchers The recommendations described are equally applicable to animals in feedlots or drought yards

Energy Nutrition in Ruminants E.R. Orskov,2012-12-06 This book is intended to be a companion volume to Protein Nutrition in Ruminants 1982 Academic Press which emphasized both the role of proteins and new systems for their evaluation Here the focus is on energy yielding nutrients and problems involved in evaluating them Nonetheless in both volumes there is explicit recognition of the interdependence of energy and protein nutrition I have not attempted to review comprehensively all the literature relating to ruminant energy nutrition and must apologize to colleagues whose work is not fully reported Where possible tables and figures are taken from the studies of our group at the Rowett Research Institute since if for no other reason I am most familiar with these data I have first considered the nutrition of the newborn and have stressed the role of behaviour in determining whether nutrients enter or bypass the rumen The development of the rumen the of anaerobic fermentation and the roles of various principles species of rumen bacteria protozoa and fungi in relation to different substrates are summarized This is followed by accounts of the factors affecting the utilization of different substrates and the v vi Preface absorption and metabolism of the end products of fermentation and digestion together with estimates of digestive capacity in various segments of the gut The ruminant s
