C. Weijnen, Zofia Lukszo, Samira Farahani, 2021-06-24 This open access book makes a case for a socially inclusive energy transition and illustrates how engineering and public policy professionals can contribute to shaping an inclusive energy transition building on a socio technical systems engineering approach Accomplishing a net zero greenhouse gas emissions economy in 2050 is a daunting challenge This book explores the challenges of the energy transition from the perspectives of technological innovation public policy social values and ethics It elaborates on two particular gaps in the design of public policy interventions focused on decarbonization of the energy system and discusses how both could be remedied First the siloed organization of public administration fails to account for the many interdependencies between the energy sector the mobility system digital infrastructure and the built environment Cross sector coordination of policies and policy instruments is needed to avoid potentially adverse effects upon society and the economy which may hamper the energy transition rather than accelerate it Second energy and climate policies pay insufficient attention to the social values at stake in the energy transition In addressing these gaps this book intends to inspire decision makers engaged in the energy transition to embrace the transition as an opportunity to bring a more inclusive society into being *Economic—Environmental—Energy Interactions* T.R. Lakshmanan, 2012-12-06 This publication is concerned with two major current debates in public policy in all affluent societies One is the widespread concern with the quality of the natural environment the quality of air water land and wilderness areas which has expressed itself in the passage and implementation in recent years of a variety of environmental laws and regulations A second debate concerns the adequacy of energy resources to meet the requirements of a growing economy The requirement that industries must abate environmental pollution leads to increased costs of production and in turn to higher prices falling output in those industries and reduced employment and income in the region where such industries are located There may be at the same

time growth in industries that supply pollution abatement equipment and services in those or other regions Over time the health and economic benefits of higher environmental quality express themselves in changing patterns of consumption
