Laboratory,1979 *Environmental Ecology* Bill Freedman,2013-09-25 Environmental Ecology The Impacts of Pollution and

Other Stresses on Ecosystem Structure and Function deals with environmental studies on the ecological impacts of anthropogenic stresses. The book discusses more particularly the ways that anthropogenic or natural influences affect the quality of the inorganic and biotic components of the biosphere as well as the human environment. The text discusses the sources of air pollution, the different toxic elements, naturally occurring contamination or anthropogenic sources and acidifying substances or acid rain. The author also cites several studies that deal with the reclamation of acidified bodies of water. Another topic the author addresses is declining forest areas; he then cites several case studies of this occurrence such as those by Fowells 1965, Hepting 1971 and Auclair 1987. The text also investigates the ecological effects of oil pollution caused during the refining process and transportation. The author then examines the general response patterns to ecological stress. The text is intended for advanced students of environmental ecology and environmental science as well as for ecologists, environmentalists and urban planners and officials.

Impacts of Using Biomass as an Energy Source in Homes

Allana Katiussya Silva Pereira, Ananias Francisco Dias Júnior, 2023-08-17. The book deepens understanding of biomass sources and technologies used for cooking worldwide. It contributes directly to the creation of policies aimed at the mitigation of climate change. Historically, wood is considered humanity's first source of energy. Even after decades of use and industrialization processes, it is still considered the most important single source of renewable energy. About a third of the world's population is energetically dependent on wood for cooking and/or heating. Recently, the Covid 19 pandemic made it impossible to purchase fuels such as liquefied petroleum gas (LPG), forcing families in financial difficulties to opt for cheaper and more accessible sources of energy such as wood and vegetable coal. This has been the picture of many families around the world and negatively impacts the environment and energy security. Considering that there are still many wood residues that are wasted and that tropical forests need to be conserved, knowledge about the energy use of wood residues is also essential. This is even more relevant when considering the significant volume of biomass coming from the sustainable management of the largest tropical forest in the world, the Amazon Forest. The book considers which wood variables should be taken into account when thinking about energy generation, how food cooking technologies contribute to potentiating pollutants emissions, and how can these harmful effects be mitigated. It describes the chemical composition of biomass and the chemical compounds released during its burning, as well as their impacts on the environment and human health. It also presents the influence that technologies used in food cooking have on pollutant emissions and which alternatives can be used, such as the use of solar energy.

Sustainable Production: Novel Trends in Energy, Environment and Material Systems

Grzegorz M. Królczyk, Małgorzata Wzorek, Anna Król, Orest Kochan, Jun Su, Janusz Kacprzyk, 2019-01-24. This book highlights recent research on sustainable production. In today's manufacturing industry, cleaner production has become a central goal. Sustainable production describes activities that pose no threat to future generations and are not pursued at their expense. In addition, sustainable production is a concept that can improve environmental performance and focuses on technical aspects.

that can be used to improve efficiency and productivity Sustainable production is not limited to the manufacturing sector but affects all production sectors including energy environment and material systems all of which face significant challenges in connection with sustainability e g efforts to reduce production s impact on the environment and to manage health and safety impacts Key means of reducing environmental pollution from manufacturing involve reducing the main resources used in production metals used in the machining processes fluids oils in production water and energy
