Moraru, 2010-10-21 Examining the role of engineering in delivery of quality consumer products this expansive resource covers the development and design of procedures equipment and systems utilized in the production and conversion of raw materials into food and nonfood consumer goods With nearly 2000 photographs figures tables and equations including 128 color figures the book emphasizes and illustrates the various engineering processes associated with the production of materials with agricultural origin With contributions from more than 350 experts and featuring more than 200 entries and 3600 references this is the largest and most comprehensive guide on raw production technology Theory and Practice of Integrated Pest Management Ramesh Arora, Balwinder Singh, A.K. Dhawan, 2017-01-01 The dominance of insects in the world fauna has made them the humanity s greatest rival for the world s food resources both directly by eating the plants cultivated for food and indirectly as vectors of pathogens attacking these plants Agricultural scientists and especially entomologists have strived hard to develop a diversity of cultural mechanical biological and chemical weapons during the last more than two centuries to gain dominance over insects However there is evidence that insect pest problems have escalated with an increasing cropping intensity and with the use of agrochemicals inherent in modern agriculture Consequently Indian plant protection scientists have intensified research on the development of pest management tactics and effective pest management systems have been designed for all the important crops in the country This book consisting of 29 chapters draws together the diverse

literature on the subject of insect pest management in agriculture and contains contributions written by scientists having extensive experience with insect pest problems in Indian agriculture. The first half of the book is devoted to the principles and components of pest management including factors affecting pest populations construction of life tables coevolution of insects and plants pest forecasting pesticides IGRs botanicals entomopathogenic nematodes and molecular approaches etc. The different tactics for the management of major insect pests of principal agricultural crops of India viz rice maize wheat forage crops cotton sugarcane vegetables fruits oilseeds pulse crops jute mesta and tobacco have been discussed in the second half of the book. The book contains a wealth of information on all aspects of insect pest management in agriculture under Indian conditions and would prove indispensable for students teachers and researchers in agricultural entomology in India and other Asian countries.
