Engines Of The Mind A History Of The Computer:

Engines of the Mind Joel N. Shurkin,1986 *Engines of the Mind* Joel N. Shurkin,1996 **Engines of the Mind** Joel N. Shurkin,1996 An introduction to the feuding researchers and inventors who made the computer possible from the huge early models to the creation of the microchip and beyond It discusses John Mauchly and Presper Eckert who developed the Electric Numerical Integrator and Computer ENIAC during World War II **PC Mag** ,1984-10-16 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology *Who Invented the Computer?* Alice R. Burks,2010-10-29 In 1973 Federal District Judge Earl R Larson issued a ruling in a patent case that was to have profound and long lasting implications for the dawning computer revolution Against all expectations the judge ruled against Sperry Rand Corp which claimed to hold the patent on the first computer dubbed the ENIAC and was demanding huge royalties on all electronic data processing sales by Honeywell Inc and other large competitors The judge came to the conclusion that in fact the ENIAC was not the first computer but was a derivative of an obscure computer called the ABC which had been developed in the late thirties by a largely unknown professor of physics and mathematics at Iowa State University named John V Atanasoff Looking back today from our digital world at what was then a little publicized trial it is clear that the judge s decision had enormous repercussions If Judge Larson had ruled the other way in favor of the patent claim subsequent manufacturers of computing hardware would have had to obtain a license from Sperry Rand and the course of computing history would likely have been very different from the galloping revolution we have all witnessed in the past three decades This book centers on this crucial trial arguing that Judge Larson correctly evaluated the facts and made the right decision even though many in the computing community have never accepted Atanasoff as the legitimate inventor of the electronic computer With meticulous research Alice Rowe Burks examines both the trial and its aftermath presenting telling evidence in convincing and absorbing fashion and leaving no doubt about the actual originator of what has been called the greatest invention of the 20th century *Machinery of the Mind* George Johnson,2011-11-16 Machinery of Mind is a full scale indispensable examination of the history content politics and philosophy of Artificial Intelligence In detail consecutively but with a keen awareness of the interdisciplinary nature of the field Johnson traces the history of the burgeoning science from its earliest practitioners to corporation funded engineers and experts Roger Schank Terry Winograd Doug Lenat and others who are struggling to create machines that can actually think independently going beyond man made programs and games Johnson presents the counterarguments of some theorists that intelligence is less than soul and that the new science moves arrogantly into dangerous territory Necessarily inconclusive this fascinating study is clear comprehensive richly detailed and endlessly provocative **Proving Ground** Kathy Kleiman,2022-07-26 Discover a fascinating look into the lives of six historic trailblazers in this World War II era story of the American women who programmed the world s first modern

computer After the end of World War II the race for technological supremacy sped on Top secret research into ballistics and computing begun during the war to aid those on the front lines continued across the United States as engineers and programmers rushed to complete their confidential assignments Among them were six pioneering women tasked with figuring out how to program the world s first general purpose programmable all electronic computer better known as the ENIAC even though there were no instruction codes or programming languages in existence While most students of computer history are aware of this innovative machine the great contributions of the women who programmed it were never told until now Over the course of a decade Kathy Kleiman met with four of the original six ENIAC Programmers and recorded extensive interviews with the women about their work Proving Ground restores these women to their rightful place as technological revolutionaries As the tech world continues to struggle with gender imbalance and its far reaching consequences the story of the ENIAC Programmers groundbreaking work is more urgently necessary than ever before and Proving Ground is the celebration they deserve *PC* ,1984 The Bit and the Pendulum Tom Siegfried,2008-05-02 Funny clear deep and right on target Siegfried lets us get a handle on ideas that are essential for understanding the evolving world K C Cole author of The Universe and the Teacup An eager ambitious book A stimulating accessible introduction to scientific theory Dallas Morning News An award winning journalist surveys the horizon of a new revolution in science Everything in the universe from the molecules in our bodies to the heart of a black hole is made up of bits of information This is the radical idea at the center of the new physics of information and it is leading to exciting breakthroughs in a vast range of science including the invention of a new kind of quantum computer millions of times faster than any computer today Acclaimed science writer Tom Siegfried offers a lively introduction to the leading scientists and ideas responsible for this exciting new scientific paradigm *Sublime Communication Technologies* Rod Giblett,2008-01-17 This lively new study is a critical cultural history of communication technologies from railways and telegraphy to computers and the Internet in which Rod Giblett argues that these technologies play a pivotal role in the cultural history of modernity and its project of the sublime

the second edition is contained in a new appendix devoted to the relationship of entropy and Gibbs free energy to economics This appendix includes a review of the ideas of Alfred Lotka Frederick Soddy Nicholas Georgiescu Roegen and Herman E Daly and discusses the relevance of these ideas to the current economic crisis The new edition discusses current research on the origin of life the distinction between thermodynamic information and cybernetic information new DNA research and human prehistory developments in current information technology and the relationship between entropy and economics

Information Theory And Evolution (Third Edition) John Scales Avery,2021-11-24 This highly interdisciplinary book discusses the phenomenon of life including its origin and evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems As the author shows this paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources Another focus of the book is the role of information in human cultural evolution which is also discussed with the origin of human linguistic abilities One of the final chapters addresses the merging of information technology and biotechnology into a new discipline bioinformation technology This third edition has been updated to reflect the latest scientific and technological advances Professor Avery makes use of the perspectives of famous scholars such as Professor Noam Chomsky and Nobel Laureates John O Keefe May Britt Moser and Edward Moser to cast light on the evolution of human languages The mechanism of cell differentiation and the rapid acceleration of information technology in the 21st century are also discussed With various research disciplines becoming increasingly interrelated today Information Theory and Evolution provides nuance to the conversation between bioinformatics information technology and pertinent social political issues This book is a welcome voice in working on the future challenges that humanity will face as a result of scientific and technological progress
