Explore and Discover 4 Tm' 2004 Ed. , Fertilization in Protozoa and Metazoan Animals Juan J. Tarin, Antonio Cano, 2000-09-14 Reproduction is the origination of new organisms from pre existing ones Among more than 35 separated forms of reproduction including several types of gamogony parthenogenesis agamogenesis fission and division and plas motomy the bisexual mode of reproduction via fertilization provides genetic variability that allows species to adapt quickly to competitive and constantly changing environments Several excellent reviews and books have been written in the past to analyse the mechanisms of fertilization in different eukaryotic

species During the last few years however renewed attention has been paid to examining the process of oocyte fertilization at the cellular molecular level not only within a single species group but also through different phylogenetic lineages As a result of this effort knowledge of the molecular pathways used by oocytes and spermatozoa at fertilization has increased but still many questions remain to be answered Being aware of the necessity of providing an integrated view of the process of fertilization this book has been entirely devoted to reviewing the process of oocyte fertilization at the cellular molecular level in two different and separated groups of eukaryotic organisms protozoa and metazoan animals The book is organized into six sections dealing with oocyte fertilization in protozoa invertebrates teleost fishes amphibians birds and mammals These sections are followed by a summary concluding chapter that provides a comparative overview of the process of fertilization in these groups of eukaryotes **Science about Us** ,1985 *Encyclopedia of Entomology* John L.
