- Compilers for Fortran 90 (or 95) are big and expensive and they do not discourage use of inessential Fortran features. Allows to use *Fortran Legacy codes* which include thousands of programs and routines in standard libraries such as IMSL (International Mathematics and Statistics Library), NAG (Numerical Algorithm Group), LAPACK and LINPACK.
- We may use **subsets** contain all of the most powerful features that Fortran users need, while providing compatibility with the full Fortran standard language.
- The **subsets** are excellent languages for introductory programming interaction. They have the features that are needed for applied programming in science and engineering (including arrays and complex arithmetic).
- They provide a way to teach the good parts of Fortran without exposing students to the bad parts.
